Additional Thanks

To the developer and writer of [The World of Pokémon](#), for their hard work of research that helped to streamline the pokémon creation process.

Chapter 1

Introduction

Preface

To start, thanks for giving this book a chance. It was made with a lot of effort and love from me towards this franchise and now I want to share what I created with the rest of the world.

It's worth noting that this isn't the final version of the book/system, as such, things are always changing between versions. With that in mind, if you find anything nice or not so much — give me your feedback! I'm always trying new things and testing what fits and what doesn't, which also means that it will take a lot of time to get everything in its bestest form. Your feedback will fasten this process a lot.

What is TGPM?

The Training Guide to Pocket Monsters is a Tabletop RPG system made to aid you into making your own adventure in the Pokémon World. The book will help you flesh out what it is like to be a Pokémon trainer: what it's their personality, how they command their Pokémon to battle and how they interact with the rest of the world.

The system is very rules-heavy, as such, it may not be the best fit for every player or gamemaster, but if you give it a try, you may find a deeply integrated system with a lot of options to customize both your trainer and your Pokémon to your liking.

The System's Core

The TGPM has 2 rules that permeate every aspect of it: first, every Pokémon is someone's favorite and, second, this is a TTRPG first, a Pokémon system second.

With that in mind, this system is made for you to play whichever Pokémon you like without ever feeling bad that they really aren't cut for any challenge.

While the original Pokémon experience rewards you for doing your best to find rare Pokémon, this may not be what every player wants. There are people that like the weird little guys, or the cutesy first stage or they may even like the coolest and strongest one, and for an electronic RPG, this doesn't matter as much: each player can play how they like, and they may have different levels of challenge. But when translating this system to a TTRPG, things don't run as smoothly.

Every Pokémon is someone's favorite

While Pokémon games are made for you to play alone, TTRPGs are made to be played in a party of several players. This distinction ties into the principle that, in the same party, you may have the powerhouse guy and the player that only picks what it finds cute.

In a system where the Pokémon original mechanics are translated faithfully, you would either make battles that the cute Pokémon can't help as much or one that the powerhouse Pokémon would crush everything without much effort — which either way, wouldn't be as pleasant to anyone.

Because of that, this system gives everyone the option to choose whatever they like, while also giving the originally not-so-strong Pokémon a chance to have equal power to even the stronger ones. For instance, in the TGPM, when a Magikarp faces a Dragonite, it may not be as one sided as it looks like.

TTRPG first

When playing this system, you may find yourself experiencing things in a way you're not completely used to, but it is intentional.

Pokémon games are made as a single player experience with the focus on 1 to 1 battles. Because of that, when we translate the battle system to an TTRPG one, many things can become quite rough: there aren't many roles besides the damage dealer and the support, which can make the game pretty stale.

Besides that, most pokémon can't do many things and have a role set in stone. For instance, there isn't much to run building your Cinderace besides a glass cannon physical attacker or to make your Chancey a special Wall with minor utility.

To mitigate that, and taking inspiration from other games from the franchise, the number of abilities (renamed to Traits) and moves were vastly increased. As such, you can experience a variety of different playstyles with your favorite pokémon, without feeling stagnant or too linear.

What is needed to play?

Firstly, you will need a group of friends, one of which will take the role of the Gamemaster (or GM for short), they'll lead you through the world and prepare challenges, the rest of you, as players, will create trainers, train your pokémon and experience said challenges.

For materials, you will need pen and paper to note your character and pokémon stats and actions, a playmat, a grid and some miniatures to make the battlefield and then a set of dice, ranging from d4 to d20, to make several rolls.

For physical play, it's recommended that you use a dice rolling app in your phone for most of the combat rolls, as they can become quite time consuming, however, there is an alternative ruling to make it feasible.

Chapter 2

Creating your Trainer

Trainer's Skills

While the pokémon's capabilities are denoted by their stats, pokédex entries and traits, the trainers are defined by their Skills. These have the primary function of defining your bonus on Skill Checks, which will be explained later in this chapter.

They're divided in 5 categories, where each has a value that is used for class effects or techniques and feats prerequisites. This value is equal to the sum of the associated skill's modifiers + any bonus to it. You can't have a category have a value higher than 20. If one of your categories is already at 20, you can't raise its base value, but you can raise its associated trainer skills.

When you're creating your trainer, you have 6 points to distribute as a skill modifier. You can choose to give up to two skills a modifier of -1 to gain the same amount in points. Additionally, give a bonus of 1 to a category of your choice. At character creation, your character can't have more than 1 skill modifier at +2 and no skill modifier at +3 or higher.

After that, you gain another 2 points to distribute every time you gain a new class feature. Then, you can give a bonus of 1 to a category of your choice. Except said otherwise, when you receive more than 1 point to distribute, you must distribute all of them to different Trainer Skills.

Physique

These skills have a direct correlation of how strong you are, how resilient you can be and how trained you're with your body capabilities, such as running and jumping.

Athletics. This skill says how skilled your body techniques are, such as climbing, running and swimming. This skill is also used to define how fast you can move, better described at page X.

Strength. This skill says how strong your body and muscles are, and as such, this skill is used to pull or push things, carrying heavy objects or even how strong your punches are. This skill is also used to define how far you can throw a pokéball and

Endurance. This skill says how much your body is able to survive tough conditions, such as freezing cold, boiling heat and push through fatigue;

Dexterity

These skills say how subtle you can be with your movements, how good your reflexes and how alert to the ambient you're and how precise you can be and how skillful you can be with your hands.

Cunning. This skill says how well you're able to balance yourself in tricky situations, such as avoiding a detecting laser, moving without making sound to not wake up a Ursaring or trying to not fall while walking through a rope. This can even be used when pickpocketing, so your touch is unnoticed;

Reflexes. This skill says how mindful you're of your surroundings and how fast you react, such as noticing that you're being watched by a Misdreavus, trying to dodge a sneak attack or trying to see from far away;

Precision. This skill says how good and precise you're using your hands, such as crafting and cooking, how precise you can throw and shoot things and even how precise your punches are. This skill is also used to define if you hit a pokémon with your pokéball or not, described later at page [XY].

Intelligence

These skills say how wise and smart you are, such as how much you know about pokémon, how good you're in common subjects such as history and biology, and also how much practical knowledge of the world you have.

Pokemonology. This skill says how much you know about pokémon, such as their habitats, what kind of food they eat and how dangerous they can be;

Knowledge. This skill says how good you're in common school subjects, such as math, biology and chemistry, useful for using medicines and knowing a place's history;

Survival. This skill says how used you're to being capable of living on your own on the wild, useful for finding food, knowing where to sleep and not losing the track of where you are;

Charisma

These skills say how easily you can bring people to your side, either by convincing them with your sympathy and charm, by tricking them with false information or making a majestic presentation.

Persuasion. This skill says how good you're at making people do what you want, by flattering them, focusing on other subjects that they would agree on or with a stunning look;

Deception. This skill says how good you're at manipulating people to believe in what you want, either by creating convincing lies, giving a good impression of fact on something you aren't sure or twisting a fact to something that you want;

Performance. This skill says how good you are in various arts, such as dancing, singing, speeching, playing instruments and doing makeup.

Willpower

These skills say how good you're at keeping your cool in hard situations, such as facing an evil spirit, deciphering what is true or false and maintaining your focus when situations are going downhill.

Bravery. This skill says how brave you are at facing scary situations, such as keeping your cool while battling a legendary pokémon or trying to shut down a criminal organization;

Intuition. This skill says how good you're in reading your surrounds and the actions from others, such as knowing if you're being used, if someone is telling the truth or guessing what if you're making a good decision or not;

Perception. This skill says how good you're at perceiving and noticing things that aren't in plain sight, such as noticing a pokémon camouflaging in shadows, that someone is following you or that there is a trap just a few steps ahead.

Standard Skill Check

Most of the time, when rolling for a Skill Check, you will roll a d12 to hit at least a certain threshold.

This happens to things that don't have trainer skills or stats, like you're rolling against an NPC or the terrain.

Example: If you're rolling your Cunning to balance yourself in a rope, this would be a Standard Skill Check, as the rope doesn't have any value to roll.

The threshold that you need to hit to be successful on your action is called Difficulty Class (DC).

Counter Skill Check

Sometimes you are faced in a situation where two relevant characters — which can be player's characters, important NPCs or even Pokémons — are doing a skill check, one against the other.

This happens when, for example, one side is trying to Persuade or Deceive the other, which will counter check with their Intuition, or when a trainer is trying to hit other trainer or pokémon — which would be, respectively, Precision against Reflexes — or two forces are pulling one against other — which would be Strength against Strength.

In any of these cases, the characters with the highest result will succeed and the lowest will fail. If the two characters tied, then the defending side (the one which tried to counter the skill check) succeeds.

Pokémon Skill Check

What can also occur is a pokémon needing to make a skill check, either countering or starting it themselves. In that case, as they don't have any Skill by default, they use their stats as the modifier, normally being the relevant stat / 3 (rounded down).

The stats are used as the following:

- **Physique** skills use **Attack** or **Defense**, whichever is higher, with the exception of **Endurance**, which uses **HP**;
- **Dexterity** skills use **Speed**;
- **Intelligence** and **Charisma** skills use **Special Attack**, with the exception of **Survival**, which use the pokémon's tier as the modifier instead;
- **Willpower** skills use **Special Defense**;

➤ Just some smarter pokémons can make a **General Knowledge** skill check, at your GM discretion;

Class

Your class is what defines how your character interacts, both in and out of battle. These can drastically change what one trainer to another can or can't do.

You gain a class feature when you create your trainer and one more at levels 3, 5, 7, 11, 13, 17 and 20, and every time you gain them you can also distribute 2 more skill modifier points. You can see what options of classes you have at page X.

Feats

You also gain a feat, a materialization of your experience, at the levels 4, 8, 12 and 19. These work as classless features, to either enhance your trainer's attributes, do outside of battle effects or niche battle utility.

Training Stats

Every trainer has their own way of teaching their pokémon. Some prefer a defensive playstyle, wearing the opponent down slow and steady, some prefer an explosive approach, going all-out so the faster and stronger wins.

One of the ways that the pokémon trainer can help their strategy work is by training their pokémon in the right way with their Training Stats.

These are what you do to prepare your pokémon to battle, helping them to keep their aim sharp or making sure their punches are as strong as they can be.

Lesser Training Stats

These are minor qualities in your pokémon stats and attributes. When you create your trainer you gain 1 point and then 1 more every level multiple of 2 except 10 and 20. These points can be distributed on any stat of the list below. You can distribute your points at any moment

You cannot increase a Lesser Trainer Stat to be more than the number of Lesser Training Stats increased, i.e. if you have +1 in attack and +1 in special attack, you can raise your attack to +2, but couldn't then raise to +3 attack, because you only have 2 different minor trainers stat raised.

For 1 point, you can:

- Increase its HP, Attack, Defense, Special Attack, Special Defense or Speed stat by 1;
- Raise its Movement Speed by 1m;
- Raise its Accuracy, gaining 2 additional dice to hit moves;
- Raise its Evasion, gaining 2 additional dice to avoid moves;
- Give its Initiative roll a bonus of +3.

For 2 point, you can:

- Increase their Move Allowance by 1.

Greater Training Stats

These are bigger qualities of your pokémon, which makes more drastic changes than the Lesser Training Stats. You gain 1 point every level multiple of 5, which can be distributed on any effect of the list below. Some Greater Trainer Stats have a maximum amount of times they can be chosen.

For 1 point, you can:

- Give it an additional Move Slot and increase their Move Allowance by 2. Can only be chosen twice.
- Give it a permanent bonus of +1 to hit a move. Additionally, once per battle and at any moment as a Free action, you can triple this bonus until the end of the round. Can be chosen twice.
- Give it a permanent bonus of +1 to avoid a move. Additionally, once per battle and at any moment as a Free action, you can triple this bonus until the end of the round. Can be chosen twice.
- Once per turn, it can spend a Free action to move up to their tier + 1 in meters. Can be chosen only once.
- Its Ranged moves have their range increased by an amount equal to twice their tier in meters. Can be chosen only once.
- Its AoE moves gain 2m in area, except line, which gain 1m in width and 2m in length. Can be chosen only once.

- Give it an additional trait. The trait acquired through this training doesn't count towards other trait's prerequisites. It also must be treated as if it was acquired before your tier III trait and after your tier II trait. Can be chosen only once.

Techniques

While Trainer Stats say much about your training routine, your techniques define what you are able to do in a battle. Just as pokémons have Moves, trainers have Techniques, however, trainers can have as many techniques as they can learn, but on the other hand, techniques spend a finite resource name Morale.

The Morale reflects how much a trainer can tell what your pokémon should do before they stop listening. Your morale is $5 + \text{your Level}/5$ (rounded down), but this number can be raised by other means. You start every battle with your Morale filled and you can recover 1 every end of the round.

You learn 2 techniques when creating your trainer and then 1 more every level multiple of 3. You can learn any technique that fits the prerequisites, including class techniques. You cannot learn techniques more than once and also, except said otherwise, the technique's effect lasts until the end of your turn.

Whenever you could learn a new Technique, if you already have another Technique with the same Training Stat prerequisite, you can choose to substitute it for another Technique with the same Lesser Training Stat as prerequisite. Non-class specific techniques without prerequisite can be substituted by any other non-class specific technique with a Lesser Stat prerequisite. If you do substitute a Technique, you can still learn another Technique.

Some effects may have your trainer gain a counter of Fatigue. Each counter of Fatigue makes your trainer's non-Drain techniques cost 1 more Morale. Fatigue is reduced by 1 at the end of every round that you didn't use any Techniques with a base Morale cost of 1 or higher.

You cannot affect your pokémon twice with a same named Technique with Hold or Drain Morale cost.

Reading the techniques

- **Category.** The first box, by itself, doesn't change anything. However, some effects interact with specific categories;
- **Morale.** How much Morale the technique spends.
 - ◊ When techniques **Hold** your Morale, you lose your maximum Morale by the same amount as its cost. You can dismiss it with a Quick Action, when this happens, recover your maximum Morale lost by that technique. This technique only enters in cooldown after it's dismissed;
 - ◊ When techniques **Drain** your Morale, you additionally lose that amount of Morale at the end of every round to maintain the effect active. You can also dismiss it with a Quick Action. Fatigue counters, doesn't increase the cost at the end of the round, but increase the cost to use it;
 - ◊ When techniques **Burn** your Morale, after you pay its cost you additionally lose that amount as maximum Morale until the end of the battle. Fatigue counters increase both the cost and the amount of maximum Morale lost.
- **Action.** Which action you need to spend to use the Technique.
- **Prerequisite.** Which conditions you need to fill to be able to learn it;

Stance Techniques

The following Techniques have a continuous effect on your pokémon, raising a little some stats or raise a good portion some stats, but lower others. The effects received from Stances last until switched out or if you change your pokémon's Stance. Your pokémon can have only one Stance at a time.

Basic Stance

Stance	Standard action	0 Morale
Your pokémon rolls 1 additional die to both hit and avoid moves.		
Prerequisite	-	

Exotic Stance

Stance	Standard action	0 Morale
When your pokémon rolls to hit and deal damage with their damaging moves, they must use their Special Attack instead of Attack for Physical moves and Attack instead of Special Attack for Special moves.		
Prerequisite	-	

Offensive Stance

Stance	Standard action	Drain 1 Morale
Your pokémon rolls 2 additional dice to hit moves.		
Prerequisite	LTS of Attack or Special Attack of at least 1	

Defensive Stance

Stance	Standard action	Drain 1 Morale
Your pokémon rolls 2 additional dice to avoid moves.		
Prerequisite	LTS of Defense or Special Defense of at least 1	

Healthy Stance

Stance	Standard action	Drain 1 Morale
At the end of every round, recover 5% of your pokémon's maximum Stamina. If they didn't receive damage this round, recover 10% instead.		
Prerequisite	LTS of HP of at least 2	

Physical Stance

Stance	Standard action	Drain 1 Morale
Your pokémon gains +1 Attack and rolls 1 additional die to hit physical moves.		
Prerequisite	LTS of Attack of at least 2	

Armor Stance

Stance	Standard action	Drain 1 Morale
Your pokémon gains +1 Defense and rolls 1 additional die to avoid physical moves.		
Prerequisite	LTS of Defense of at least 2	

Special Stance

Stance	Standard action	Drain 1 Morale
Your pokémon gains +1 Special Attack and rolls 1 additional die to hit special moves.		
Prerequisite	LTS of Special Attack of at least 2	

Barrier Stance

Stance	Standard action	Drain 1 Morale
Your pokémon gains +1 Special Defense and rolls 1 additional die to avoid special moves.		
Prerequisite	LTS of Special Defense of at least 2	

Quick Stance

Stance	Standard action	Drain 1 Morale
Your pokémon gains +1 Speed and gains +2 Movement Speed.		
Prerequisite	LTS of Speed of at least 2	

Reckless Stance

Stance	Standard action	Drain 2 Morale
Your pokémon gains +1 Attack, +1 Special Attack and rolls 1 additional damage dice, however, they also roll 1 less dice in their damage reduction roll.		
Prerequisite	LTS of Attack and Special Attack of at least 1	

Guard Stance

Stance	Standard action	Drain 2 Morale
Your pokémon gain +1 Defense, +1 Special Defense and roll 1 additional dice on their damage reduction roll, however, they also roll 2 less damage dice.		
Prerequisite	LTS of Defense and Special Defense of at least 1	

Hasty Stance

Stance	Standard action	Drain 2 Morale
At the end of every round, reduce one of your pokémon's moves that are already in cooldown by 1. However, you roll 2 less dice on both their damage rolls and damage reduction rolls.		
Prerequisite	LTS of HP and Speed of at least 1	

Finesse Stance

Stance	Standard action	Drain 2 Morale
Your pokémon gains their tier as additional dice to both hit and avoid moves, however, they roll 1 less die in both their damage rolls and damage reduction rolls.		
Prerequisite	LTS of Accuracy and Evasion of at least 2	

Universal Stance

Stance	Standard action	Drain 2 Morale
Your pokémon gains 2 additional dice to both hit and avoid moves. They gain 1 additional dice to both their damage rolls and damage reduction rolls as well.		
Prerequisite	At least 1 point distributed into 5 different LTS	

Offensive Techniques

These techniques will help you deal damage more consistently, on a larger scale or ignoring some of the target defenses.

Strike!

Offensive	Standard action	2 Morale
Your pokémon gains a third of their tier (rounded up) to hit their next move.		
Prerequisite	-	

Defense Break

Offensive	Standard action	3 Morale
The targets of your pokémon's next move have their Defense or Special Defense (your choice) reduced by 1 stage after the move's resolution.		
Prerequisite	LTS of Attack or Special Attack of at least 1	

Strike First

Offensive	Standard action	4 Morale
Can only be used if your pokémon entered the battlefield this round. Until the end of the round, their moves gain a bonus of +2 to hit and half their tier (rounded up) as additional damage dice against targets that didn't have their turn in this round yet.		
Prerequisite	LTS of Initiative of at least +3	

Supercharge

Offensive	Standard action	5 Morale
Your pokémon's next damaging move rolls additional damage dice equal to its tier.		
Prerequisite	LTS of Attack or Special Attack of at least 2	

Armor Opening

Offensive	Standard action	5 Morale
Your pokémon's next damaging move gains "Sharpness 5%" for every leftover success it had.		
Prerequisite	LTS of Speed of at least 2	

Pinpoint

Offensive	Standard action	3 Morale
Your pokémon's next Accuracy Check to hit a move receives "Margin of Success +1". If the triggering move has a negative Margin of Success or its tier is IV or above, this technique costs 2 additional Morale.		
Prerequisite	LTS of Accuracy of at least 4	

Kinetic Force

Offensive Standard action 4 Morale

Your pokémon's next move damage roll gains an additional die for every 3 Movement Speed they spent this turn.

Prerequisite LTS of Movement Speed of at least 2m

Combo Finisher

Offensive Standard action 5 Morale

Your pokémon's next damaging move gains "Sharpness 10%" for every move it has on cooldown.

Prerequisite LTS of MA of at least 2

Blind Spot

Offensive Interrupt action 5 Morale

You can use this technique when an opponent pokémon adjacent to your pokémon uses a move targeting another pokémon. Your pokémon can spend their Interrupt action to use a move up to d6 damage category (before STAB) against the triggering pokémon.

Prerequisite Perception modifier of at least +2

Defensive Techniques

These techniques will help you keep your pokémon's conscious, keep their Stamina high or recover it, raising its chances to avoid the moves or reducing the damage taken by one way or another.

Dodge!

Defensive Interrupt action 2 Morale

Your pokémon gains a third of their tier (rounded up) to avoid the next move that targets them.

Prerequisite -

Hold your Place

Defensive Standard action 3 Morale

Until the start of your next turn, when your pokémon is targeted, before the attacking pokémon rolls the accuracy check, you can choose to reduce its Attack or Special Attack (your choice) by 1 stage.

Prerequisite LTS of Defense or Special Defense of at least 1

Disengage

Defensive Standard action 2 Morale

Until the end of the round, their Movement Action can't trigger any opponent's effects and they gain their tier as additional Movement Speed.

Prerequisite LTS of Evasion of at least 2

Second Wind

Defensive Standard action Burn 2 Morale

Your pokémon recovers 20% of its maximum Stamina. Then, gain 2 Fatigue counters.

Prerequisite LTS of HP of at least 2

Defense Shift

Defensive Standard action 3 Morale

The next time your pokémon is targeted by a damaging move, they may treat Special moves as if they were Physical and vice-versa.

Prerequisite LTS of Defense and Special Defense of at least 1

Sidestep

Defensive Interrupt action 4 Morale

Your pokémon's next Accuracy Check to avoid a move receives +1 Margin of Success. If the triggering move has a positive margin of success or its tier is IV or higher, this technique costs 1 additional Morale.

Prerequisite LTS of Evasion of at least 4

Riposte

Defensive Interrupt action 5 Morale

Can only be used if an ally pokémon is targeted by a damaging move and your pokémon knows a move with the exact same type of targeting.

Your pokémon enters in Interrupt action Debt and you must choose 1 of their moves that fit the criteria. That move enters on cooldown. Then, you can roll to deal damage with it (including Critical Hit and effectiveness, the latter against the triggering move's type).

The targets of the triggering move then use this roll as their damage reduction roll. This technique can reduce the damage up to 0, in which case, the move fails.

Prerequisite LTS of MA of at least 1

Concentrate Defenses

Defensive	Interrupt action	2 Morale
This technique can be used right after your pokémon is hit by a damaging move. The next time your pokémon makes a damage reduction roll, they have its damage category raised by 1. Additionally, it can reduce the damage to 1/5 rather than 1/3.		
Prerequisite	LTS of Defense or Special Defense of at least 2	

Known Trick

Defensive	Standard action	Hold 3 Morale
Choose an opponent trainer and a move. When a chosen trainer's pokémon uses the chosen move, your pokémon gains a bonus of +2 to avoid that move.		
Prerequisite	Pokemonology modifier of at least +2.	

Utility Techniques

These techniques will have effects that don't directly correlate into more damage, accuracy, defenses or evasion. Some effects may change the way that your other actions, like using a move or do your movement, work, while others can affect the opponent trainer or even it doesn't do anything in combat.

Pokéball Bounce

Utility	Interrupt action	1 Morale
Can only be used when one of your pokémon switches in. They appear in a free space up to twice its tier away from the space that the pokémon that switched out was.		
Prerequisite	-	

Hit and Run

Utility	Standard action	2 Morale
Your pokémon gains their tier as Movement Speed and their next Melee targeting move gains Moving 1.		
Prerequisite	LTS of Speed of at least 1	

Concentrate Energy

Utility	Standard action	3 Morale
Your pokémon's next damaging move with AoE as its base targeting is changed to Ranged X but has its damage category raised by 1, where X is equal to 3 + the move's tier.		
Prerequisite	LTS of Accuracy of at least 2	

Disorient

Utility	Interrupt action	4 Morale
Choose an opponent trainer. Roll a Persuasion or Performance skill check against their Intuition skill check. In a success, their ongoing technique fails and they gain 1 Fatigue counter, however, they recover half (rounded down) the Morale spent.		
Prerequisite	Charisma value of at least 4.	

Explosive Force

Utility	Standard action	2 Morale
Your pokémon's next damaging move with base Melee or Ranged targeting becomes AoE, but they roll less damage dice equal to half their tier (rounded up). If the move were Ranged, it becomes Targets in Blast 2m up to 4m, while Melee moves become Targets in Cone 4.		
Prerequisite	Strength modifier of at least +2	

Deep Breath

Utility	Standard action	0 Morale
This technique Morale cost isn't affected by Fatigue counters. This technique additionally costs a Interrupt and a Quick action. Recover 1 Morale and reduce your Fatigue counters by 1.		
Prerequisite	Endurance modifier of at least +2	

Careful Application

Utility	Quick action	0 Morale
The next Industrial Healing Item that you use doesn't spend your pokémon's Standard or Quick action.		
Prerequisite	Knowledge modifier of at least +2	

Copycat

Utility

Free action

Hold 2 Morale

Choose an opponent trainer and one of their techniques. While this Technique is held, you can use the chosen technique.

Prerequisite

Performance of at least +2

Last Hope

Utility

Free action

0 Morale

Can only be used right before you would use a Technique that you don't have enough Morale to use. You can use the triggering technique with its Morale cost increase by 2, however, your Morale will go negative. While your Morale is negative, you can't use, hold or drain any technique.

Prerequisite

Bravery of at least +2

Character Progression

As a quick way to follow what exactly are you gaining which each level, you can use the following tables:

Character Progression by Level							
Level	Trainer Skill	Class Features	Training Stats		Techniques	Feats	Morale
			Lesser	Greater			
1	+6	Yes	1	0	2	0	5
2	+6	No	2	0	2	0	5
3	+8	Yes	2	0	3	0	5
4	+8	No	3	0	3	1	5
5	+10	Yes	3	1	3	1	6
6	+10	No	4	1	4	1	6
7	+12	Yes	4	1	4	1	6
8	+12	No	5	1	4	2	6
9	+12	No	5	1	5	2	6
10	+12	No	5	2	5	2	7
11	+14	Yes	5	2	5	2	7
12	+14	No	6	2	6	2	7
13	+14	No	6	2	6	3	7
14	+16	No	7	2	6	3	7
15	+16	No	7	3	7	3	8
16	+16	No	8	3	7	4	8
17	+18	Yes	8	3	7	4	8
18	+18	No	9	3	8	4	8
19	+18	No	9	3	8	5	8
20	+20	Yes	9	4	8	5	9

Character Progression by Level

Level	Summary
1	6 Trainer Skill, a Class Feature, 2 Lesser Training Stats, 2 Techniques, 5 Maximum Morale
2	+1 Lesser Training Stat
3	+2 Trainer Skill, a Class Feature, +1 Technique
4	+1 Lesser Training Stat, +1 Feat
5	+2 Trainer Skill, a Class Feature, +1 Greater Training Stat, +1 Maximum Morale
6	+1 Lesser Training Stat, +1 Technique
7	+2 Trainer Skill, a Class Feature
8	+1 Lesser Training Stat, +1 Feat
9	+1 Technique
10	+1 Greater Training Stat, +1 Maximum Morale
11	+2 Trainer Skills, a Class Feature
12	+1 Lesser Training Stat, +1 Technique
13	+1 Feat
14	+1 Lesser Training Stat
15	+1 Greater Training Stat, +1 Technique, +1 Maximum Morale
16	+1 Lesser Training Stat, +1 Feat
17	+2 Trainer Skills, a Class Feature
18	+1 Lesser Training Stat, +1 Technique
19	+1 Feat
20	+2 Trainer Skill, a Class Feature, +1 Greater Training Stat, +1 Maximum Morale

Chapter 3

Classes

Quick Guide

There are several approaches a person can have to the training of their pokémon. Some have their own interests and they apply them to pokémon battle, some of them have a distinct personality that can be seen in their way to train pokémon, while others specialize themselves in pokémon battling.

In any way, people usually orbitate one of a few archetypes of pokémon training, which we'll call Classes. These will be rated in a range between 0 to 3 in the following categories: Proactivity, Versatility and Difficulty.

➤ **Proactivity.** This category is defined by how much the trainer's own Actions will influence the battle and how important right calls are.

◊ For example, a proactivity 3 trainer right calls can change a battle from losing to winning, but a bad call can do the opposite.

➤ **Versatility.** This category is defined by how specific to a playstyle the class features and how many different playstyles it can benefit.

◊ For example, a versatility 0 trainer could, for instance, only really benefit pokémon which have high Stamina.

➤ **Difficulty.** This category is defined by how many choices the trainer has before and during the battle, as well as how knowledgeable the player needs to be about the system.

◊ For example, to achieve the maximum potential of a difficulty 3 trainer, you would need to make several impactful choices every round.

Reminder: Any training effect from a class featured based training is lost when the pokémon is traded.

Class	Proactivity	Versatility	Difficulty	Core Themes
Adventurer	☆☆☆	★★★★	☆☆☆	- Focus on exploration - Powerful last stand
Athlete	★★★★	★★★☆☆	★★★☆☆	- Movement specialist - Technique heavy
Breeder	☆☆☆☆	★★★★	☆☆☆☆	- Power of friendship - Expands movesets
Chef	☆☆☆☆	★★★★	★★★★	- Consumable held items specialist - Mitigates Morale burning
Coordinator	★★★★	★★★☆☆	★★★☆☆	- Offensive focus - Peak Morale recovery
Grunt	★★★☆☆	★★★☆☆	★★★☆☆	- Status and Debuffs specialist - Unfair tactics
Fighter	★★★★	★★★☆☆	★★★☆☆	- Melee specialist - Can defend themselves
Medic	★★★★	★★★★	★★★★	- Consumable items specialist - Defensive playstyle
Strategist	★★★★	★★★★	★★★★	- Active in and outside their turn - High risk, high reward
Tutor	☆☆☆☆	★★★★	★★★☆☆	- Moves specialist - Unpredictable pokémon

Adventurer

The adventurer is your classic youngster, ready to venture the wilds and face any obstacles through sheer courage, determination and trust in their friends. Some people may call them lucky, but their strength lies in their innate intuition and their indomitable will.

Even if they don't have any signature tactics, thanks to the power of believing in their heart, they may defy their fate, make an unbelievable comeback and win against all odds.

- **Relevant skill category:** Willpower;
- **Relevant skills:** Bravery and Intuition;
- Last pokémon refers to the last conscious pokémon you have.

Adventurer's Instinct

At level 1, when the subject is traveling, your gut feeling can always tell you if something isn't quite right, like feeling that you shouldn't be in that place or you may be starting a fight that you can't win.

Additionally, the pokémon that you capture can make 2 additional TC per Complete Time Block. This effect is lost after they enter the battle.

Balanced Tactics

At level 3, you gain 2 additional Trainer Skill modifiers to distribute and can learn 1 additional technique of a category that you don't have yet.

Additionally, you can calculate how far you can throw a pokéball based on your Bravery instead.

Never Give Up!

At level 5, you gain a bonus of +1 on skill checks to find items in the wild, to cook or craft items. You gain a modifier of -1 in the d20 roll to catch a pokémon as well.

Additionally, when you send out your last pokémon, the first time they would have their Stamina reduced to 0 by a neutral or opponent's effect, reduce it to 1 instead. If your last pokémon is also the last pokémon of your party, while it's under 50% Stamina (rounded up), their moves also gain "Margin of Success +1".

Always Adapting

At level 7, once per session, you can roll any Skill Check with your Bravery or Intuition modifier instead.

Additionally, during a battle, you can spend your Standard action to make your pokémon ignore the negative effects of the current Weather and Terrain until the end of your turn. This effect has cooldown 1.

Perfected Basics

At level 11, while your pokémon in the Basic Stance, once per round, you may spend a Free action to, until the end of the round, reduce your next Technique morale cost by 1.

Alternatively, whenever you use the Strike! or Dodge! techniques, or any technique with Adventurer class as its prerequisite, recover 1 morale.

Elite Backpacker

At level 17, you master the basics of the Adventurer lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Bravery, Intuition and Athletics;
- You gain 1 LTS point to distribute between HP, Accuracy and Evasion;
- Your Willpower category is increased by 2.

The Journey's End

At level 20, Whenever you roll any die outside of battle, you may reduce or increase its result by 1.

Additionally, choose one of your current techniques, between Basic Stance, Secure!, Dodge!, and Encouragement. It evolves into the following, respectively: Adventurer Stance, Sure Hit!, Dash Out!, or Boost Up. They count as their original names for the purpose of activating your class features.

Adventurer Stance

Stance	Standard action	0 Morale
Your pokémon gains a bonus of +1 to both hit and avoid moves. If your side has less or equal conscious pokémon as the opponent team, your pokémon gains 2 additional dice to both hit and avoid moves as well.		
Prerequisite	The Journey's End class feature	

Sure Hit!

Offensive	Standard action	2 Morale
Your pokémon's next move gains a bonus of +3 to hit, ignores positive Evasion stat stages of the targets and can target any pokémon on the battlefield that is in their field of vision. If the move is AoE, it's instead centered anywhere in the battlefield.		
Prerequisite	The Journey's End class feature	

Dash Out!

Defensive	Interrupt action	2 Morale
Your pokémon gains a bonus of +3 to avoid the next move that targets them. Additionally, your pokémon ignores any positive Accuracy stat stages from the attacker. Then, if your pokémon avoided the triggering move, they may trigger Knockback 5 (Any) on either themselves or the attacker.		
Prerequisite	The Journey's End class feature	

Boost Up

Utility	Quick action	0 Morale
Your pokémon rolls 3 additional dice on their next Accuracy Check to either hit or avoid a move. Then, you may spend 1 additional Morale to reduce the cooldown of their Move with the highest cooldown currently by 1.		
Prerequisite	The Journey's End class feature	

Techniques

All techniques listed here have the requirement of being the Adventurer class.

Curve Ball

Utility	Quick action	1 Morale
You gain a bonus equal to your Willpower/3 (rounded up) to your next Precision Skill Check to hit a pokéball. Additionally, if you hit, reduce the d20 result to catch it by 1.		
Prerequisite	-	

Encouragement

Utility	Quick action	0 Morale
Your pokémon rolls 2 additional dice on their next Accuracy Check to hit or avoid a move.		
Prerequisite	-	

Plot Armor

Defensive	Interrupt action	Burn 1 Morale
Can only be used if your pokémon is being targeted by the opponent. The triggering move doesn't trigger any of its chance based keywords, even if it is 100%. If the triggering chance was 100%, Burn 3 instead. Then, you gain 1 Fatigue counters.		
Prerequisite	Intuition modifier of at least +3	

I Believe in You!

Offensive	Standard action	Burn 2 Morale
Can be used in the middle of your pokémon's moves. You can only use this technique when your pokémon misses a move's target. The triggering move gains your Level/3 (rounded up) as a bonus to hit. After that, recalculate which targets were hit. Then, gain 3 Fatigue counters.		
Prerequisite	Bravery modifier of at least +4	

Athlete

With the wind passing through their hair, sun burning their head and the constant impact of their feet hitting the ground. However, it's all worth it if they can reach the finish line faster than everyone.

The athlete is the specialist in movement, gaining the power through the momentum gained through movement. Besides moving through the battlefield, this class also diverges into 3 different playstyles: constantly switching pokémon, reaching sky high initiatives and through keeping your pokémon's Stamina high.

- **Relevant skill category:** Physique;
- **Important skills:** Athletics and Endurance;
- The core aspect of this class is gathering Motion counters and converting them into Lap counters. When doing so, to gain 1 Lap counter, you must spend an amount of Motion counters equal to half your level + 5 (rounded up).

Both Motion and Lap counters are lost at the end of the battle.

Gym Bro

At level 1, you can tell just by the looks if a trainer has above average Physique or a pokémon has LTS in HP, Speed, Initiative or Evasion.

Additionally, you gain a bonus of +1 to the skill check of a Guided Training of LTS of HP, Speed, Movement Speed or Initiative.

Racing Passion

At level 3, for every meter your pokémon's moves, you gain 1 Motion counter. As a Free action at any moment, you can convert Motion Counters into Lap counters. These are used as a resource of some of your Athlete's techniques.

Additionally, you can learn an Athlete's technique that has the Lap X keyword.

Running Style

At level 5, you master some modality of racing. Choose between Relay, Sprint or Marathon. You learn the Athlete's technique that has that modality as its prerequisite.

Additionally, you gain one of the following effect, based on the modality chosen:

- **Relay:** When your pokémon switches out, gain your Athletics modifier in Motion counters.
- **Sprint:** At the start of your pokémon's turn, if the sum of your pokémon current initiative and Movement Speed is equal or higher than (their tier x 4) + 15, gain 1 Lap counter.
- **Marathon:** At the end of your turn, if your pokémon's Stamina is above 75%, gain your Endurance modifier in Motion counters.

Leading the Way

At level 7, you gain a bonus of +1 in Endurance and Athletics Skill Check if it's about running. Also, whenever you have a result of 15 or higher in a Athletics or Endurance Skill Check about running, you can give a bonus of +2 on the same check for any number of allies that can see you.

Additionally, for every 3 Lap counters you gain, recover 1 Morale.

Signature Modality

At level 11, you better develop your training regimen to better fit your modality of choice. As such, you gain the following effects, based on your modality:

- **Relay:** You can calculate your throwing range based on your Athletics modifier instead. Additionally, you can teach your pokémon Baton Pass (move), even if they don't have the coverage for it. Also, whenever your pokémon switches out by a technique or move's effect, they recovers 20% of their maximum Stamina;
- **Sprint:** Your Movement Speed is raised by 3m. Additionally, if your pokémon is the first in the initiative, you can spend 1 Morale to reduce 1 of their move's cooldown by 1;

➤ **Marathon:** You become resistant to 2 types of your choice. Additionally, for every meter your pokémon moves, it recovers 2 Stamina.

Elite Jogger

At level 17, you master the basics of the Athlete lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Athletics, Endurance and Perception;
- You gain 1 LTS point to distribute between Speed, Movement Speed and Initiative;
- Your Physique category is increased by 2.

Gotta Go Fast

At level 20, all your pokémon have their Movement Speed increased by 2m. Additionally, they receive one of the following effects, based on your Modality:

- **Relay:** Your pokémon's positive stat stages only start to be reduced at the 3rd round and after they're outside of the battlefield.
- **Sprint:** Your pokémon can spend their Quick action to increase their Movement Speed by 50% (rounded up).
- **Marathon:** On switch in and at the end of every round, your pokémon gains 1 Marathon counter for every meter in Movement Speed they have. For every Marathon counters your pokémon has, they have all their damage reduction rolls increased by 1. Marathon counters are lost on switch out.

Techniques

All techniques listed here have the requirement of being the Athlete class. Some of the following techniques have the **Lap X** and **Twice** keywords. The first means that you must spend X amount of Lap counters to use the following effect, while **Twice** means that you can spend X amount again to trigger the following effect.

Long Jump

Utility	Standard action	1 Morale
---------	-----------------	----------

Your pokémon immediately moves a number of meters equal to your Athletics modifier. Moving this way doesn't trigger the Hazard keyword.

Prerequisite -

Running Stance

Stance	Standard action	Drain 1 Morale
--------	-----------------	----------------

Your pokémon gains +2 Movement Speed and, twice per round, when they spend any action moving, you gain their tier in Motion counters.

Prerequisite -

Eat Dust

Utility	Quick action	1 Morale
---------	--------------	----------

Can be used in the middle of your pokémon's Movement action.

Lap 1: An opponent pokémon adjacent to yours has their Evasion reduced by 1 stage.

Twice: Also reduces their Accuracy stat stages by the same amount, but costs 1 more Morale.

Prerequisite -

Confidence Boost

Offensive	Standard action	1 Morale
-----------	-----------------	----------

Lap 3: Your pokémon have their Attack and Special Attack stat stages raised by 1.

Prerequisite -

Raise Momentum

Utility	Standard action	2 Morale
---------	-----------------	----------

Lap 2: Your pokémon Speed stat stage is raised by 1.

Prerequisite -

Relay Pass

Utility	Interrupt action	1 Morale
---------	------------------	----------

Can only be used either in between turns or in ally's turns.

Lap 3: Your pokémon switches out.

Twice: The incoming pokémon has their Speed stat stage raised by 2.

Prerequisite Relay modality

Headstart

Offensive Interrupt action 0 Morale

Can only be used at the start of the round.

Lap 3: Your pokémon gains a bonus of +3 in their initiative until they switch out. Additionally, if your pokémon's is the first in the initiative, until the end of your next turn, their next damaging move roll 3 additional damage dice.

Prerequisite Sprint modality

Last Stretch

Offensive Standard action 4 Morale

Your pokémon's next move gains "Margin of Success +1".

Lap 6: It also gains "Critical Hit Margin +4".

Prerequisite Athletics modifier of at least +4

Take a Breather

Defensive Standard action 0 Morale

Lap 1: Set your pokémon's stat stage that are currently negative to their base stat stage.

Twice: Your pokémon recovers 20% of their maximum Stamina. Then, you gain 3 Fatigue counters.

Prerequisite Marathon modality

Slow and Steady

Defensive Interrupt action 4 Morale

Can only be used at the round start.

Lap 3: Your pokémon's initiative is set to 0, but their Defense, Special Defense and Speed stat stages are raised by 1.

Prerequisite Endurance modifier of at least +2

Bump

Utility Quick action 0 Morale

Lap 1: Your pokémon triggers Knockback 3 to an adjacent pokémon.

Twice: Trigger Knockback 5 instead.

Prerequisite Athletics modifier of at least +3

Quick Rest

Defensive Standard action Burn 2 Morale

Can only be used as the first action in your turn (pokémon included).

Trigger "Snare 1" on your pokémon. Then, recover their Stamina by 15%.

Lap 2: Double the amount recovered.

Twice: Triple it instead, but you gain 4 Fatigue counters.

Prerequisite Endurance modifier of at least +3

Breeder

Every pokémon, huge or small, fearsome or cute, spiky or round, deserves love. This is your motto, and you'll make sure that every pokémon who comes into your life will know that they are special, in their own way.

The breeder power comes through their bonds with their pokémon. Through their friendship, they can keep their partner safe from danger. The breeder can also awaken the power dormant in the pokémon genes, giving them new moves.

- **Relevant skill category:** Charisma;
- **Important skills:** Persuasion and Pokemonology;

Natural Caretaker

At level 1, wild pokémon aren't bothered as much by your presence and are calmer when interacting with you.

Additionally, when acquiring a pokémon from a gift, trade, egg hatching or capture without a battle, they start with 1 additional level of Friendship.

Daycare Manners

At level 3, your pokémon with Friendship 2 or higher roll additional dice to avoid moves equal to your Persuasion modifier.

Additionally, as long as your pokémon can see you, they don't fear pokémon that prey on them.

Minor Egg Move

At level 5, your pokémon that you acquired by hatching their egg gains +1 MA and 1 additional move slot that can fit one tier 1 move that your DM finds appropriate to that species.

You can also give this effect to any pokémon that you gained additional friendship with Natural Caretaker by spending 2 TC to do a Lineage Exposition.

Token of Friendship

At level 7, when one of your pokémon reach Friendship 6, they gain one of the following benefits (your choice):

- This pokémon doesn't lose any of its action when a Healing item is used on it;
- Once per battle, this pokémon can roll half its Friendship (rounded up) as bonus dice on its damage reduction roll;
- Once per battle, when this pokémon enters the battlefield, their trainer recovers 2 Morale;
- At the GMs discretion, this pokémon finds gifts in the wild to give to their trainer;

This benefit only applies while the pokémon is on your team.

Egg Move

At level 11, you can now teach your pokémon an egg move, which is a move tier III or below of one of the coverages below, based on the pokémon's egg group. If the pokémon doesn't have an egg group but their evolution has, use one of their evolution's egg group instead.

An egg move counts as a TM and can't be taught to a final stage pokémon without an egg group. However, they aren't forgotten on evolution.

- **Amorphous:** Artificial, Water
- **Bug:** Kicking, Poison
- **Dragon:** Fearsome, Fire
- **Fairy:** Cute, Psychic
- **Field:** Recoil, Fighting
- **Flying:** Wind, Ice
- **Grass:** Powder, Ground
- **Human-like:** Punching, Normal
- **Mineral:** Hazard, Steel
- **Monster:** Biting, Dark
- **Water 1:** Sound, Grass
- **Water 2:** Nature, Ice
- **Water 3:** Whipping, Bug

Elite Rancher

At level 17, you master the basics of the Breeder lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Persuasion, Pokémonology and Survival;
- You gain 1 LTS point to distribute between Special Defense, Speed and Evasion;
- Your Charisma category is increased by 2.

Friendship is Magic

At level 20, at the end of every round, if your pokémon on the battlefield has 10 Friendship or higher, you recover X morale, where X is equal to your current pokémon Friendship - 9.

Additionally, on switch in or at the start of every round your pokémon gains Friendship counters equal to the Friendship value, to a maximum of 11.

Whenever your pokémon rolls a die, as a Free action, they may spend any amount of Friendship counter to reroll the same amount of dice. This effect may be activated only once per die.

Techniques

All techniques listed here have the requirement of being the Breeder class.

Positive Reinforcement

Utility	Standard action	2 Morale
---------	-----------------	----------

Until the start of your next turn, your current pokémon gains half of their Friendship level (rounded up) as additional dice to avoid moves.

Prerequisite	-
--------------	---

Almost There!

Utility	Standard action	4 Morale
---------	-----------------	----------

Reduce the cooldown of one of your pokémon's moves by 1.

Prerequisite	-
--------------	---

Massage Session

Utility	See below for action	0 Morale
---------	----------------------	----------

Can only be used outside of combat and once per Complete Time Block. By spending a Short Time Block, for the next Complete Time Block, the targeted pokémon can do 1 additional Training and have its Friendship raised by 1. Its Friendship can go above 10 this way.

Prerequisite	Pokémonology modifier of at least +3
--------------	--------------------------------------

Sweet Memories

Utility	Interrupt action	Burn 2 Morale
---------	------------------	---------------

Once per effect per battle, you or your pokémon can trigger again an effect limited to once per battle.

Prerequisite	Persuasion modifier of at least +4
--------------	------------------------------------

Chef

There is no better thing in life than smelling the aroma of a well cooked meal. This feeling and your passion for the culinary arts is what drives you forward. While other trainers may focus on the battlefield, you prefer to make your pokémon your helpers in the kitchen instead.

Chef's always have their food prepared in advance, as such, in battle it is more of a matter of serving the right dish to the right guest.

- **Relevant skill category:** Dexterity;
- **Important skills:** Precision and Reflexes;

Good Quality Products

At level 1, you always know which plants can and can't be eaten. You also have a good notion of what taste the food you're making will have.

Additionally, when buying or foraging for berries or ingredients, you may spend up to 1 additional Short Time Blocks in that action to make half of them (rounded up) **Good Quality** for each Short Time Block spent. Dishes items are considered **Good Quality** when more than half their ingredients are also **Good Quality**.

Good Quality berries and Dish Items recover 10% of their maximum Stamina when eaten.

Seasoning

At level 3, you are now able to buy seasonings at food and convenience stores for P\$ 50, which can season up to 5 dishes or berries. You can forage for them in the wild. You can season your berry and dishes items with them to give one of the below effects:

- Additionally cure it from one status condition;
- Increase their Movement Speed by 1/5 of your Dexterity (rounded up) until the end of the battle (this effect doesn't stack);
- Your pokémon rolls half their tier (rounded up) as additional dice in their next damage roll;
- Your pokémon rolls half their tier (rounded up) as additional dice in their next damage reduction roll;

Delicious Aroma

At level 5, when your pokémon recover Stamina by eating a berry or dish, if the Stamina recovery would go over 100%, keep the leftover Stamina as temporary Stamina, like from the Shield keyword, for 2 rounds.

Additionally, for every berry or dish that your pokémon ate in battle, you recover 1 Stamina. For every 2 berries or dishes your pokémon ate in battle, increase your maximum Morale by 1 until the end of the battle.

Signature Recipe

At level 7, you develop your very own recipe. When gaining this class feature, choose 1 of the following effects and how the food you make appears and tastes. This food counts and works exactly as an Advanced Dish with a DC of 7, however, you don't need any Feat to prepare it.

The ingredients are P\$ 150, this dish can have up to 2 seasonings from the Seasoning Class Feature and is always considered **Good Quality**.

- When this pokémon Stamina would be reduced to 0, the pokémon consume this held item to set its Stamina to 1 instead;
- When using an effective damaging move, the pokémon can consume this held item to gain 1 stat stage in their Attack or Special Attack (their choice);
- When receiving an effective damaging move, the pokémon can consume this held item to resist the triggering move one step further;
- When spending a action to use a Status move targeting an opponent, the pokémon can consume this held item to use it as a Quick action instead;

Culinary Lessons

At level 11, you may spend 3 TC to make a Culinary Lesson to your pokémon. By doing so, the affected pokémon gain either the Slashing, the Nature or the Sweet coverage. These are the Culinary coverages.

Additionally, the pokémon that received this lesson now can make Culinary Recipes as well and, when doing so, gain 1/4 of your Dexterity (rounded up) as a bonus to the skill check. A pokémon can't receive the Culinary Lesson more than once.

Elite Cook

At level 17, you master the basics of the Chef lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Precision, Reflexes and Intuition;
- You gain 1 LTS point to distribute between HP, Speed and Initiative;
- Your Dexterity category is increased by 2.

Masterchef

At level 20, while you have a Cooking Set, you can spend your Standard and Interrupt action to prepare a dish item, doing any Skill Check as usual. If the item prepared is an Advanced Dish, you become in Standard action Debt. Then, you may immediately throw it to your pokémon. They immediately equip it as a Quick action.

However, during the battle, if your skill check result to prepare a dish item is 5 numbers or more lower than the DC to prepare it, your preparation fails and the food becomes inedible.

When you make a Precision skill check to prepare a dish item in battle, for every time you activate this class feature in this battle, the skill check receives a penalty of -3.

Techniques

All techniques listed here have the requirement of being the Chef class.

Aftertaste

Utility	Standard action	4 Morale
Your pokémon triggers a berry or dish held item that they have already eaten again. This technique instead Burns 2 Morale if the triggering item effect recovers Stamina.		
Prerequisite	-	

Just a Bite

Defensive	Standard action	Burn 1 Morale
Can only be used if your pokémon has a berry or dish held item. They roll a number of d2 equal to its HP and restore the result as Stamina. Then, you gain 2 Fatigue counters.		
Prerequisite	-	

Dietician Stance

Stance	Standard action	Drain 2 Morale
If your pokémon has already eaten a berry or a dish during this Combat, they gain +2 Defense and Special Defense. Additionally, when your pokémon eats a berry or dish held item, raise its Speed by 1 stage.		
Prerequisite	Reflexes modifier of at least +3	

Explosion of Flavours

Offensive	Standard action	3 Morale
Can only be used if your pokémon has a berry or dish held item. By eating their held item without triggering its usual effects, your pokémon's next move receives "Critical hit Margin +2", if it's Physical or Special category, or "Margin of Success +1", if it's Status category.		
Prerequisite	Precision modifier of at least +4	

Coordinator

Lights, style, moves, a little glitter and a lot of emotion. The coordinator is the ideal class for those who aspire for the excitement of performing on a stage. Lovers of the art, they're known for always finding beauty in their own pokémon and honing their abilities to better fit their personality. They're always ready for a new show, afterall, you never know when is your chance to shine!

The coordinator is a natural improviser and lover of the theater, as such, they focus on creating a memorable spectacle, with an intriguing narrative with their ups and downs.

- **Relevant skill category:** Charisma;
- **Important skills:** Performance and Persuasion;
- Some of this class' effects refer to **Tear Down** and **Build Up** stages. Your trainer is in the **Tear Down** stage while their Morale is above half (rounded up), if it isn't, then you're in the **Build Up** stage. For these stages, ignore the maximum morale lost to Burn and Hold techniques.

Professional Performer

At level 1, people treat you better than they usually do.

Additionally, you learn the following Technique.

Narrative Shift

Utility	Quick action	0 Morale
Trigger one effect based on your current stage: Tear Down: Spend up to 2 additional Morale. For every Morale this technique spent, your pokémon's next move gains "Critical Hit Margin +1". Built Up: You can choose to recover up to 2 Morale. For every Morale recovered, your pokémon's next Accuracy Check to hit or avoid moves gains a penalty of -1.		
Prerequisite	-	

Up and Downs

At level 3, your Morale now is calculated as 4 + your Charisma value/2 (rounded up).

Additionally, your pokémon gain the following passive effects while in the Hype Stance:

- While in **Tear Down** stage, your pokémon's roll for Critical Hit is made with a die of 1 category below.
- When you leave the **Tear Down** stage, your pokémon gain X amount of dice to avoid moves until the start of their next turn, where X is equal to half of your Performance modifier (rounded up);
- While in the **Build Up** stage, you recover 1 Morale whenever you use an effective damaging move against an opponent or score a critical hit;
- When you leave the **Build Up** stage, either lose 1 Fatigue counter or recover 1 morale.

Rehearsed Choreography

At level 5, you can spend your Standard action to do a Choreography, when doing so, roll a Performance Skill Check. You can choose to spend your pokémon's Quick action to gain a bonus equal to their tier on this skill check. After that, based on the result, you gain the following effects:

- If the result is at least 6, you lose 1 Fatigue counter;
- If the result is at least 9, recover 2 Morale;
- If the result is at least 12, choose 1 opponent trainer. They have to make an Intuition or Focus check DC 10. In a failure, they become Flinched at the start of their next turn.
- If the result is at least 15, choose 1 opponent pokémon. Roll a d100. In a result equal or less to the double of your Performance skill check result, they become Infatuated by an ally pokémon of your choice.

Idol Manners

At level 7, while outside of battle, when you make a Performance or Persuasion Skill Check, you can choose to have your pokémon aid you in your action, giving you a bonus of +2.

Additionally, once per combat, when your Morale reaches 0, you can become in Standard and Interrupt action Debt to recover it to full.

Headhunter

At level 11, you can spend 3 TC to make a Talent Discovery Training. By doing so, the affected pokémon receive either the Spinning, the Light or the Dancing coverage. These are the Show coverages.

Additionally, they gain a +2 modifier in their Performance skill checks and can use any stat as their relevant stat for this skill.

Whenever your pokémon uses their Signature move or a move from a Show coverage, if it's used against an opponent and it's a critical hit or has at least 3 leftover success from the Accuracy Check to hit, you recover 1 Morale. Otherwise, if the move doesn't target an opponent, your pokémon can make a Performance Skill Check DC 10, in a success, you recover 1 Morale.

A pokémon can't receive the Talent Discovery Training more than once.

Elite Idol

At level 17, you master the basics of the Coordinator lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Performance, Persuasion and Reflexes;
- You gain 1 LTS point to distribute between Attack, Special Attack and Accuracy;
- Your Charisma category is increased by 2.

Elaborate Spectacle

At level 20, once per round, whenever you would use any Technique, you can choose to double its Morale cost to use that Technique a second time as a Free action and without paying any Morale.

Techniques

All techniques listed here have the requirement of being the Coordinator class.

Stunning Entrance

Utility	Interrupt action	5 Morale
---------	------------------	----------

You can only use this technique when your pokémon enters the battlefield. Flinch all opponent trainers and reduce the Accuracy stat stage of all your opponent's pokémon by 1. Then, you gain 2 Fatigue counters.

Prerequisite -

Stage Presence

Defensive	Standard action	2 Morale
-----------	-----------------	----------

Until the start of your next turn, all opponent pokémon receive a penalty of -1 to hit another pokémon that isn't yours.

Prerequisite -

Charm Throw

Utility	Standard action	0 Morale
---------	-----------------	----------

Make a Persuasion Skill Check against an opponent trainer Intuition Skill Check. In a success, until the start of your next turn, the targeted trainer can't use any Offensive or Defensive category Technique. If you fail, recover 1 Morale.

Prerequisite Persuasion modifier of at least +3

All Out!

Offensive	Standard action	X Morale
-----------	-----------------	----------

This technique's cost is equal to your current Morale and can only be used while in Tear Down. For every 2 Morale spent to use this technique, trigger one of the following effects:

- Your pokémon have 1 stat of your choice raised by 1 stage, up to once per stat;
- Your pokémon next Damaging move rolls 1 additional damage die, up to a maximum equal to half your Level (rounded up);

Then, you gain 3 Fatigue counters.

Prerequisite Performance modifier of at least +4

Fighter

Training is your passion, however, what you do is a little different. While other trainers teach their pokémon new tricks, you find it more efficient if yourself is just as good in combat as your pokémon. And, who knows, maybe you can teach your partners a move or two.

Fighters can enter the fight alongside their pokémon and, as such, are able to fend for themselves. However, if they're in sync with their pokémon, they may be able to follow your lead and use moves they couldn't otherwise.

- **Relevant skill category:** Physique;
- **Relevant skills:** Strength and Reflexes;
- When you use a Martial Move, consider your Physique value as your Attack and Dexterity value as your Speed.

Diligent Training

At level 1, you can tell just by the looks if a pokémon has a higher Attack or Defense than its special counterpart.

Additionally, you can make 2 additional Guided TC per Complete Time Block.

Martial Artist

At level 3, you master a style of fighting. Choose one following coverage: Punching, Kicking or Spinning. This is your Martial Art. Then, choose a tier I move of this coverage. You learn it as a Martial Move.

You can spend 2 TC to make your pokémon do a Martial Arts Preparation. When you use a move in battle, if your pokémon already made the Martial Arts Preparation, they may use the exact same move following the standard rules. They can use it even if they don't have the move learned.

Battle Stance

At level 5, while your pokémon's current Stance (that isn't Basic Stance) raises damage dice or dice to hit moves — either directly or indirectly — their moves deal additional damage equal to your Physique value.

Likewise, if their current Stance raises their damage reduction dice or dice to avoid moves, they reduce the damage received by your Physique value (before applying the damage reduction roll, effectiveness and critical hit).

Showing Off

At level 7, you may use your Strength or Reflexes modifier for your Persuasion or Deception Skill Checks to intimidate, impress or show your reliability to someone.

Additionally, you can learn a move tier II or below from your Martial Art as a Martial Move. In battle, the first time every round that you use a move, recover 1 Morale.

Peace of Mind

At level 11, when one of your pokémon would use one of your damaging Martial Moves, as a Free action, you may spend 1 Morale to let them roll their damage dice using any of their stats instead of the relevant attack.

Additionally, you now mastered your mind as well. Choose one following coverage: Protection, Dancing or Healing. This is your Spiritual Art. Then, choose a move tier II or below from this coverage. You learn it as a Martial Move.

Elite Blackbelt

At level 17, you master the basics of the Fighter lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Strength, Reflexes and Precision;
- You gain 1 LTS point to distribute between Attack, Defense and Movement Speed;
- Your Physique category is increased by 2.

World Champion Difference

At level 20, you learn 1 tier IV and 1 tier V move of either your Martial Art or Spiritual Art coverage.

Whenever your pokémon uses one of your Martial Moves from your Martial Art coverage, raise their Attack and Special Attack stage by 1.

Whenever your pokémon uses one of your Martial Moves from your Spiritual Art coverage, raise their Defense and Special Defense stage by 1.

Techniques

All techniques listed here have the requirement of being the Fighter class.

Quick Coaching

Offensive	Quick action	3 Morale
-----------	--------------	----------

Your pokémon's next move gains either a bonus equal to half their tier (rounded up) to hit or half your Strength modifier (rounded up) as additional damage dice.

Prerequisite -

Serene Mind

Utility	Quick action	X Morale
---------	--------------	----------

Choose one of your moves in cooldown. That move's cooldown is reduced to 0.

This technique's Morale cost is equal to the amount of turns of cooldown reduced by technique + 1.

Prerequisite -

Parry

Defensive	Interrupt action	3 Morale
-----------	------------------	----------

Choose between you and your pokémon to be the parrier. Choose one of your damaging Martial Moves and make it enter in cooldown. Then, the parrier rolls to hit with the chosen move, following the standard rules. Count the number of successes. This will be the X value.

The next move used by pokémon adjacent to the parrier gains a penalty to hit equal X.

Prerequisite Reflexes modifier of at least +3

Ultra Punch!!

Offensive	Quick action	5 Morale
-----------	--------------	----------

Your next move gains a bonus of +2 to hit, "Sharpness 20%" and rolls half your Strength modifier (rounded up) as additional damage dice. If your move missed or didn't hit anyone, this effect is applied to your pokémon's next Martial move as well.

Prerequisite Strength modifier of at least +4

Grunt

You don't like rules. To be honest, you hate the rules. You hate them so much that you maybe joined an evil organization that has the objective of conquering the world but we're going off track. For you, when things come to shove, you have to take care of what is yours and use any way available to ensure that things will go as you planned.

This same shady principle applies to how the grunt deals with pokémon battle, which isn't the most honorable, but it works, and to you, this is what it matters.

- **Relevant skill category:** Dexterity;
- **Important skills:** Cunning and Deception;
- **Negative Keywords** are the following: Binding, Debuff, Locked, Slow and Snare.

Intimidating Aura

Starting with level 1, at first sight, people and pokémon tend to fear you and take your questions and requests more seriously.

Additionally, all your pokémon can learn Cold Aura, even if they don't have coverage for it.

Sneaky Tactics

At level 3, your pokémon gains half your Cunning modifier (rounded up) as additional damage dice when targeting opponents with a Negative Keyword or a Status Condition.

Additionally, you can always tell if there is a place close to you that you can buy items for a cheaper price.

Pickpocketing

At level 5, you gain a bonus of +2 to your Cunning skill checks to not be noticed.

Additionally, whenever your pokémon applies a Negative Keyword, you can choose to trigger "Knocked" on the affected pokémon. This effect has cooldown 1.

Illegal Moves

At level 7, you gain a bonus of +2 in Cunning or Reflexes Skill Check to do something illegal.

Additionally, once per battle, when using a Healing item, you can make a Cunning Skill Check DC 9 + 3 x the amount of points the item costs with the League Rules. In a success, you use the item without anyone noticing, and thus not costing any points.

Reminder: The illegal activity doesn't need to be morally bad to receive the bonus.

Pick your Poison

At level 11, choose 2 different Status Conditions. You become immune to them. Additionally, you can buy Status Vials for P\$ 100 at shady places or make it yourself by mixing herbs and berries, with a Survival Skill Check DC 8.

This item is a small vial with a venom inside that can be held in a battle. This vial doesn't take your pokémon Held item slot but acts as a Held item otherwise. Each pokémon can only hold 1 vial.

Your pokémon can spend their Quick action and consume the Status Vial to make their next move gain 100% X, where X is the status condition chosen when buying or making the concoction.

Elite Delinquent

At level 17, you master the basics of the Grunt lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Cunning, Deception and Strength;
- You gain 1 LTS point to distribute between HP, Speed and Accuracy;
- Your Dexterity category is increased by 2.

Deep Cut

At level 20, whenever one of your pokémon inflicts a Status Condition or applies a Negative Keyword on an opponent pokémon, apply on them a Wound mark as well. Wound marks last for 2 rounds after they're applied and are removed on switch out.

Whenever a pokémon with a Wound mark would lose Stamina to a Status Condition or Negative keyword, they lose it twice.

Whenever a pokémon with a Wound mark would roll to be cured from a Status Condition, they roll twice, then take the highest result.

Techniques

All techniques listed here have the requirement of being the Grunt class.

Strong Affliction

Offensive	Standard action	2 Morale
-----------	-----------------	----------

Your pokémon's next move has its % chance to cause a Status Condition doubled. If the % chance was already 100%, it gains a bonus of +1 to hit.

Prerequisite -

Smoke Bomb

Defensive	Standard action	4 Morale
-----------	-----------------	----------

Inflict Invisible on your pokémon. This Invisibility ends at the end of their next turn.

Prerequisite -

Improvised Feint

Offensive	Standard action	5 Morale
-----------	-----------------	----------

This technique can be used right after your pokémon misses a move.

Your pokémon immediately uses another move with the same action cost at the same target as a Free action. The opponent gain a penalty equal to the triggering move's tier to avoid this technique's Free action move

Prerequisite Deception modifier of at least +3

Grunt Tactics

Offensive	Standard action	4 Morale
-----------	-----------------	----------

Your pokémon's next Melee or Ranged move gains "If the target is adjacent to an allied pokémon or afflicted with a Status Condition or a Negative Keyword, Margin of Success +1".

Prerequisite Cunning modifier of at least +4

Medic

In this world, pokémon battles happen all the time, to start or solve conflicts, to brute force your way to your objective or to become a professional pokémon trainer. It's also worth noting that the pokémon by itself are pretty dangerous, most of them being able to cause severe damage to humans. In that regard, you find actually worrisome that this world has just a few medicine professionals.

In any way, keeping everyone healthy to face the problems that lie already is your top most priority, and that priority also reflects in the defensive way of battling that they have.

- **Relevant skill category:** Intelligence;
- **Important skills:** Knowledge and Survival;
- **Medicinal Items** refer to Stamina Healing, Status Healing and Revives.

Medical Contacts

Starting with level 1, you can always tell when someone is sick or hurt. You can also tell what they need to do to recover and how much time it will take.

Additionally, you can buy Medicinal Items for 10% less pokédollar (rounded down).

Professional Use

At level 3, your Medicinal Items gain your Knowledge in range.

Additionally, when using any Medicinal Item, you can additionally spend your Quick Action to make the item additionally recover Stamina equal to your Intelligence value.

Treatment Test

At level 5, you can design a level 1 Treatment, with 1 of the following effects. When your Treatment gains an additional level, you can choose another of the following effects.

You can spend your Standard action to apply the Treatment to 1 of your pokémon adjacent to you or inside a pokéball that you're holding. This effect has cooldown 1.

- Choose 2 Status Conditions when designing your Treatment. It cures them. Can be chosen multiple times, adding 2 new Status Conditions to be cured.
- Choose 2 stats, including Evasion and Accuracy. Set the target's chosen stat stages to its default stage. Can be chosen multiple times, each letting you affect 2 additional stat.
- This effect can only be triggered once per battle. Choose 1 stat, except Accuracy and Evasion. Until the end of the battle, the chosen pokémon's base stat stage of the chosen stat is raised by 1. Can be chosen multiple times, each letting you affect 1 additional stat.

General Practitioner

At level 7, you gain a bonus of +2 in Knowledge and Perception Skill Check to do any health or medical related activity.

Additionally, for every 2 League Points worth in Medicinal Items used in battle, you gain 1 additional current and maximum Morale until the end of the battle.

Doctor on Duty

At level 11, once per Complete Time Block, as a Short Time Block, you can use your First Aid Kit to improvise a Bandage.

Additionally, at the start of every battle, you gain Emergency counters equal to your Intelligence/5 (rounded up). Outside of your turn, you may spend an Emergency counter and a Free action to regain 1 Interrupt action.

Your Treatment gains 1 more level as well.

Elite Doctor

At level 17, you master the basics of the Medic lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Knowledge, Survival and Persuasion;
- You gain 1 LTS point to distribute between HP, Defense and Special Defense;
- Your Intelligence category is increased by 2.

Labour of Love

At level 20, at the start of every round, for every Emergency counter you have, recover 5 Stamina from 1 of your pokémon inside their pokéball. If you have 0 Emergency counters, gain 1 Emergency counter instead.

Additionally, you may use techniques that you don't have enough Morale to spend. If you do so, your morale can go below 0. While your morale is below 0, you can't use any techniques.

Techniques

All techniques listed here have the requirement of being the Medic class.

Emergencial Healing

Defensive	Interrupt action	5 Morale
-----------	------------------	----------

You can move up to your Movement Speed in meters and then use a Stamina recovering item targeting a pokémon.

Prerequisite -

Medical Technique

Utility	Free action	1 Morale
---------	-------------	----------

You can use this technique right before you use a Medicinal Item. The next Medicinal Item that you use doesn't make the pokémon become in action Debt. Additionally, you can apply it from anywhere in the field.

Prerequisite -

Stay with Us!

Defensive	Interrupt action	Burn 1 Morale
-----------	------------------	---------------

Can only be used when your pokémon Stamina would be reduced to 0 that isn't its own move or effect. The triggering effect or move leave your pokémon with 1 Stamina instead. Then, gain 3 Fatigue counters.

Prerequisite Survival modifier of at least +3

Haste Mixture

Utility	Quick action	5 Morale
---------	--------------	----------

Your next Medicinal Item additionally reduces the cooldown of 1 of the target's moves by 2.

Prerequisite Knowledge modifier of at least +4

Strategist

While most trainers do pokémon battles as their secondary skill, some of them have their complete focus on mastering it. Strategists are focused and knowledgeable trainers that study the ins and outs of pokémon battles, as such, facing one will always result in a scary match.

However, behind such battle knowledge, you need precise predictions of what will benefit you the most. While Strategists have more leverage than other trainers, it means that a wrong calculation may be your downfall as well.

➤ **Relevant skill category:** Willpower;

➤ **Important skills:** Intuition and Pokémonology;

Always Prepared

Starting with level 1, you always know if the opponent's morale is high or not.

Additionally, you learn 1 additional Technique.

Counter Measure

At level 3, you can spend your Quick action to set up a trigger condition in secret from the opponents. Then, until the start of your next turn, the first time the triggering condition occurs, you can use any of your techniques as a Free action. If you did so, the technique used defaults to lasting until the end of your next turn instead.

You can also choose to use this Free action to use Intel or Taunt action instead. However, if the conditions didn't happen until then, this class feature enters in cooldown for 1 round.

The triggering condition must be a phrase composed of an actor, an action and target. The sum of Versatility Level (VL) can't be higher than 3.

➤ **Actor:** Who will perform the action.

◊ **1 VL:** [A specific opponent pokémon];

◆ If the specified pokémon switches out, Counter Measure doesn't enter in cooldown on your next turn because the conditions didn't happen;

◊ **2 VL:** "Any opponent pokémon";

➤ **Act:** The action that the actor has to do to trigger your Counter Measure.

◊ **0 VL:** "Use(s) [the specific move] targeting";

◊ **1 VL:** "Use(s) a [specific type]-typed move targeting";

◊ **1 VL:** "Use(s) a Melee/Ranged/AoE move targeting";

◊ **1 VL:** "Use(s) a Physical/Special/Status move targeting";

◊ **2 VL:** "Use(s) any move targeting";

◊ **2 VL:** "Move(s) towards to/away from";

➤ **Target:** Which pokémon is targeted by the move or compared to the movement.

◊ **0 VL:** [A specific pokémon];

◆ If the specified pokémon switches out, consider the pokémon sent in its place instead;

◊ **1 VL:** "Any opponent/allied pokémon";

Examples of triggering condition's phrases:

➤ Psyducks uses a Ranged move targeting any allied pokémon;

◊ **1 VL:** [A specific opponent pokémon] + **1 VL:** Use(s) a Melee/Ranged/AoE move targeting + **1 VL:** Any opponent/allied pokémon;

➤ Litwick uses any move targeting Hoppip;

◊ **1 VL:** [A specific opponent pokémon] + **2 VL:** use(s) any move targeting + **0 VL:** [a specific pokémon];

In my Hand

At level 5, once per round, when you would use a Technique outside of your turn, reduce its cost by 1. If its cost was already 0, recover 1 morale instead.

Additionally, when you successfully trigger Counter Measure, until the start of your next turn, your current pokémon receives half your Intuition modifier (rounded up) as additional dice on their Accuracy Check to avoid moves against the opponent pokémon that triggered Counter Measure.

Professor's Apprentice

At level 7, you gain a bonus of +2 in Intuition and Pokémonology Skill Check about important pokémon information.

Additionally, when an opponent's pokémon enters the battlefield, you can spend your Interrupt action to use the Intel action.

Denying

At level 11, once per round, when your pokémon uses a move outside of its turn, recover 1 Morale.

Additionally, when an opponent's effect would reveal an information about you or your pokémon, do the following:

- If the effect isn't a result of a Skill Check, they make a Skill Check of an appropriate Trainer Skill, defined by the GM, with a DC equal to half your Willpower/2. In a failure, you can choose to give false information.
- If the effect is a result of a Skill Check with DC, raise it by 4. If they fail, the trainer will think it succeeded and you can choose to give false information.
- If the effect is a result of a contested Skill Check, you gain a bonus of +3. If you succeeded, you can choose to make the other trainer think that they succeeded and give them false information.

Elite Commander

At level 17, you master the basics of the Strategist lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Intuition, Pokémonology and Deception;
- You gain 1 LTS point to distribute between Defense, Special Defense and Evasion;
- Your Willpower category is increased by 2.

Mastermind

At level 20, at the end of every turn, if you didn't spend your Standard action to gain 1 additional Interrupt action. This Interrupt action can be kept indefinitely, however, you cannot keep more than 3 Interrupt actions at any given time.

Whenever you successfully trigger Counter Measure, you can immediately set it up again as a Free action. When you do so, you can spend 2 Interrupt actions to restore your pokémon's Interrupt action.

Techniques

All techniques listed here have the requirement of being the Strategist class.

Strategic Focus

Utility	Standard action	0 Morale
Recover 1 Morale. If this technique is used outside of your turn, you can immediately use another technique as a Free action, however, you gain 1 Fatigue counter.		
Prerequisite	-	

Tactical Retreat

Utility	Standard action	2 Morale
Switch out your pokémon.		
Prerequisite	-	

Battle Expertise

Utility	Standard action	1 Morale
Choose an opponent's pokémon or trainer. Roll your Pokémon Knowledge against a DC of 6 + the pokémon tier or the trainer's level/3 (rounded down, minimum of 1). If you succeed, you know all the pokémon's moves or the trainer's techniques.		
Prerequisite	Pokémonology modifier of at least +3	

Counterstrike

Offensive	Free action	4 Morale
Choose 1 of your pokémon's moves. Until the start of your next turn, when you trigger Counter Measure, your pokémon may immediately use the chosen move as an Interrupt action.		
Prerequisite	Intuition modifier of at least +4	

Tutor

There is a profession for everything, and teaching isn't an exception. While teachers focus on human learning, pokémon Tutors focus their attention on honing the pokémon's abilities. As such, while other trainers focus more on what their pokémon use or in specific strategies, tutors give their best to make their pokémon their best possible form.

Because of that, Tutor's pokémon are the most unpredictable, by not only being able to learn almost any move possible, but have a larger move list as well. Not only that, a Tutor is an invaluable addition to any party thanks to then being able to teach new moves to other pokémon as well.

- **Relevant skill category:** Intelligence;
- **Important skills:** Pokemonology and Perception;
- Any move taught through a Tutor's class features are considered **Tutor Moves**.

Living Pokédex

Starting with level 1, you don't need pokédex to know pokémon information such as habitat, diet, coverage or archetypes.

Additionally, you can teach 2 different moves of the same tier as part of the same TC.

Learning your Origins

At level 3, once per pokémon, you can spend 2 Short Time Blocks to change one of your pokémon standard coverages to become a Natural coverage. If that pokémon evolves, it loses this benefit and needs to do it again.

Additionally, using your teaching knowledge, when you're making a Guided Training, you can roll your Pokémonology or Perception skill instead. You can use this effect on only 2 TCs per Complete Time Block.

Minor Tutor Move

At level 5, choose one non-generic tier I or II move. You can teach that move to any pokémon, following the TM's ruling.

Additionally, whenever one of your pokémon uses a move that they naturally wouldn't learn, such as a move learned by a Technique, class feature, Trait or TM, recover 2 morale. That move cannot recover morale again by this effect until the end of battle.

Expanded Knowledge

At level 7, when you're making a Persuasion or Deception skill check against a pokémon, you can choose to roll it with your Pokémonology or Perception modifier instead.

Additionally, you can make a Knowledge Expansion training by spending 3 TCs. After that, your pokémon gains +1 MA and can now learn TMs or Tutor moves of the same tier as theirs.

Tutor Move

At level 11, choose another 1 non-generic tier I or II move and 1 non-generic tier III move. You can teach that move to any pokémon, following the TM's ruling.

Additionally, whenever you're teaching or upgrading a move of one of your pokémon, it takes 1 TC less, to a minimum of 1.

Elite Teacher

At level 17, you master the basics of the Tutor lifestyle. As such, you gain the following benefits:

- You gain 2 points to distribute between the skills Pokémonology, Perception and Persuasion;
- You gain 1 LTS point to distribute between Special Attack, Speed and Accuracy;
- Your Intelligence category is increased by 2.

Endless Wisdom

At level 20, choose 1 non-generic tier IV move. You can teach that move to any pokémon, following the TM's ruling.

Additionally, you can do an Endless Wisdom training by spending 3 TCs. After that, your pokémon now has their Move Slots set to 10. For every additional Move Slot your pokémon had, they gain +1 MA instead.

Techniques

All techniques listed here have the requirement of being the Tutor class.

Over the Edge

Offensive

Standard action

3 Morale

Your pokémon's next move gains the STAB bonus.

Prerequisite

-

Move Rehearsing

Utility

Standard action

Hold X Morale

While you know this technique, you can spend 2 Short Time Blocks to rehearse a move of a tier equal to your level/5 (rounded up).

When using this Technique in battle, your pokémon learns the move that you rehearsed while this technique is held. The morale cost of this technique is equal to the rehearsed move's tier.

When you may only have 1 rehearsed move at any given time.

Prerequisite

-

Versatile Stance

Stance

Standard action

Drain 1 Morale

For every move your pokémon has in cooldown, they gain 1 additional die to both hit and avoid moves.

Prerequisite

Perception modifier of at least +3

Little Trick

Utility

See below for action and for Morale

Can only be used once per Complete Time Block and only outside of combat by doing 1 TC with 1 of your pokémon. They acquire a new trait that has prerequisite of type or coverage, however, they forget it at the end of the Complete Time Block.

Prerequisite

Pokemonology modifier of at least +4

Chapter 4

Feats

While every trainer has their signature set of abilities, described by their class, techniques, trainer skills and training stats, the experience that they gain in their journey can also materialize in its own feature - that being the Feats.

While Class Features and Techniques focus on making your pokémon stronger in battle, Feats will focus more on what you as a trainer can do. This is made in raising your skills modifiers, learning additional techniques, getting extra stats or miscellaneous stuff, such as making your pokéballs more precise and with an elevated catch rate.

General Feats

The following Feats can be acquired by any pokémon trainer with enough levels.

Pokémon Catcher

You can spend your Quick action to double your pokéball throw range and the Precision modifier on the Precision Skill check to hit the pokéball.

Additionally, when rolling to see if you captured a pokémon, reduce the result by 1.

Field Experience

You gain 3 points to distribute in 3 different skills from 3 different categories and raise 1 of your categories by 1.

Additionally, you can change one of your Techniques for another. You can choose this Feat multiple times.

Training Routine

You gain 1 Lesser Training Stat to distribute and you can make 1 additional Guided training per Complete Time Block.

Additionally, you can change one of your Techniques for another. You can choose this Feat up to 2 times.

Technical Trainer

You learn 1 additional Technique.

Additionally, if your pokémon doesn't have a Stance, you can use a Stance Technique as a Quick action. If you did so, you don't need to pay its Morale cost. You can choose this Feat multiple times.

Skill Feats

The following Feats require your training to have some Trainer Skills modifier or Skill Category of at least a certain value.

Impactful Entrance

Prerequisite: Physique category of at least 7

When you switch in your pokémon, you can spend your Interrupt action to throw their pokéball into another pokémon. If you did so, roll a Counter Skill Check of Athletics or Strength against the target's Cunning. In a success, the pokémon loses your Physique value in Stamina.

Reminder: It's against the League Rules to a trainer uses moves against other trainers or pokémon. However, judges can let it slide that you "accidentally" threw your pokéball on an opponent pokémon...

Fit for Battle

Prerequisite: Athletics modifier of at least 3

You can use your Athletics modifier instead of Endurance when calculating your limit of Guided Trainings per Complete Time Block.

Additionally, you can use Tackle move as a Standard action, considering your Physique category value as your Attack and Dexterity category value as your Speed.

Stunt Double

Prerequisite: Endurance modifier of at least 3

You gain resistance to 3 types of your choice.

Additionally, when training your pokémon's with either a new damaging move or the Lesser Training Stat of Attack or Special Attack of a pokémon of a type that you resist, you can serve as a target for them during a Guided training.

When doing so, that training always takes 1/2 the amount of TC (rounded up), however, you can still make a Endurance Skill Check DC 15 to make it take 1/3 of the amount of TC (rounded up) instead. You can trigger this effect only once per Complete Time Block.

Martial Training

Prerequisite: Strength modifier of at least 3

You can use Rock Smash as a Standard action, considering your Physique category value as your Attack and Dexterity category value as your Speed.

Additionally, when training either the Lesser Training Stat of Defense or Special Defense, you can serve as an attacker for them to resist during a Guided training. When doing so, you gain a bonus of +2 on the skill check.

However, if in this check you hit 18 or above, that training takes 1/3 of the amount of TC (rounded up) instead. You can trigger this effect only once per Complete Time Block.

Juggler

Prerequisite: Dexterity category of at least 7

At the round start, you can switch out your pokémon after every other trainer, but still before the initiative. You share this timing with any other trainer with the Juggler feat. Additionally, you gain the following technique:

Quick Switch

Utility

Interrupt action

Burn 2 Morale

Immediately switch out your pokémon. If it were being targeted by a move, the new pokémon is targeted instead. The, gain 2 Fatigue counter;

Prerequisite -

Magic Tricks

Prerequisite: Cunning modifier of at least 3

You can roll the Taunt action with your Cunning instead of Deception.

Additionally, you gain a bonus of +1 to your Taunt action Skill Check.

Evasive Steps

Prerequisite: Reflexes modifier of at least 3

You automatically avoid moves with equal or less successes than your Level/2 (rounded up) or traps with a DC of 4 + your Reflexes modifier or less.

Additionally, when training either the Lesser Training Stat of Accuracy or Evasion, you can, respectively, serve as a target to them to hit or teach them your avoiding skills. When doing so, you gain a bonus of +2 on the skill check.

Advanced Culinary

Prerequisite: Precision modifier of at least 3

You gain the ability to prepare Advanced Dishes.

Additionally, you gain a bonus of +2 in the Precision Skill Check to prepare a Dish.

Additionally, you become able to cook Delicious dishes that can raise your pokémon's friendship. To do so, you have to hit a Culinary Recipe's Skill Check with a result at least 3 numbers higher than its DC.

Methodical

Prerequisite: Intelligence category of at least 7

You can spend your Quick action to analyze a pokémon. Make a Knowledge, Pokémonology or Survival Skill Check against a DC of 10. In a success, you know the pokémon maximum and current Stamina and their stats, including training stats.

Pokédex Master

Prerequisite: Pokémonology modifier of at least 3

You can update your pokédex for P\$ 250. With an updated pokédex in hand, you gain a bonus of +1 to your Intel action and can make it with a Quick action instead.

Advanced Ball Crafting

Prerequisite: Knowledge modifier of at least 3

You gain the ability to craft Complex Balls.

Additionally, you gain a bonus of +2 in the Knowledge Skill Check to craft a Pokéball. Now, you can craft 2 balls per Short Time Block as well.

Advanced Herbology

Prerequisite: Survival modifier of at least 3

You gain a bonus of +2 in the Survival Skill Check to make Herbal medicine items.

Additionally, whenever you find any amount of berries or herbs, you find 1 more.

Natural Leader

Prerequisite: Charisma category of at least 7

At the start of every other round, you recover 1 additional Morale.

Additionally, your own pokémon gain Friendship faster than normal.

Powerful Charm

Prerequisite: Persuasion modifier of at least 3

As a Standard action, you can charm an opponent trainer or wild pokémon. Roll a Counter Skill Check of your Persuasion against the target Intuition. In a success, you apply the following effects:

- Against a trainer, they become Paralyzed for the next 3 rounds;
- Against a wild pokémon, you receive a bonus of +2 to hit your pokéball and a modifier of -2 on the d20 roll to catch them;

Technical Feint

Prerequisite: Deception modifier of at least 3

Right after your pokémon uses a move, you can spend your Standard action, if the move was used during your turn, or Interrupt action, if it wasn't, to fake what move you ordered your pokémon to use.

For that, roll a Counter Skill Check of your Deception against the target's trainer Intuition or Pokemonology. In a success, the target trainer can't use any technique in response to your pokémon's move.

After you successfully use this feat, you cannot use it again until the end of the next round.

Contest Moves

Prerequisite: Performance modifier of at least 3

During a Short Time Block in a city, you can make a Show with your pokémon. For that, roll a Performance Skill Check. After that, define the Audience Score, to do so, divide the result of the Skill Check by 5 (rounded down). For every Audience Score, you gain P\$25 x your amount of GTS. You can gain pokédollar with this feat only once per Complete Time Block.

High Spirits

Prerequisite: Willpower category of at least 7

At the start of your turn, if you're Flinched, you can choose to spend 1 Morale to be cured from it. If you're already immune to Flinch, whenever you would be inflicted Flinch, you lose 1 Fatigue counter.

Additionally, you recover 2 Morale whenever an opponent pokémon is defeated.

Inspiring Leader

Prerequisite: Bravery modifier of at least 3

Whenever your pokémon would be Flinched or be Paralyzed by a non-Electric type move from an opponent pokémon, you can spend your Interrupt action and roll a Bravery Skill Check with a DC equal to 5 + the move's tier. In a success, your pokémon doesn't receive the triggering status condition.

This feat Skill Check's DC is raised by 3 for every success you had on using it during the current battle.

Bad Omen

Prerequisite: Intuition modifier of at least 3

Once per battle per pokémon, whenever your pokémon would be knocked out by an opponent's damaging move, you can spend your Interrupt action and roll a Intuition Skill Check DC 8. In a success, your pokémon rolls your Intuition modifier as additional dice to reduce the damage.

This feat Skill Check DC raises in 4 for every success you had on using it during the current battle.

Keen Senses

Prerequisite: Perception modifier of at least 3

You gain a bonus of +2 to perceive hidden people, pokémon or objects.

Additionally, you can now find pokémon in the Invisible status condition with a Perception Skill Check DC 9.

Class Feats

The following feats are all class exclusive and with a requirement of Skill Modifiers or Skill Category of at least a certain value.

One Ball Trainer

Prerequisite: Adventurer Class, Bravery and Intuition modifier of at least 2

The first time in a battle or (if not applicable) Short Time Block this trainer throws a pokéball at a wild pokémon, they receive the following bonuses:

- The pokéball range is doubled;
- They may add their Intuition or Bravery (whichever is higher) modifier in the Precision Skill Check to hit that pokémon;
- The d20 result to catch the pokémon is reduced by 3;

The Power of Believing

Prerequisite: Adventurer Class, Willpower category of at least 12

When your pokémon switches in, if they're the last conscious pokémon in your side of the battle, trigger the following effects:

- Fully recover your Morale and reduce your Fatigue counter to 0;
- Your pokémon receives twice your Willpower category value as temporary Stamina, like the Shield keyword;
- Your pokémon has all of their stats raised by 1 stage (including Accuracy and Evasion).

Star Athlete

Prerequisite: Athlete Class, Athletics and Endurance modifier of at least 2

Once per Complete Time Block, if you're in a city, you occasionally encounter a fan of your carrier. They gift you an item with a value up to P\$ 50 x your Level, defined by the GM.

Headstart Momentum

Prerequisite: Athlete Class, Physique category of at least 12

At the start of the battle, you gain twice your Physique category as Motion counters, up to the equivalent of 2 Lap counters.

Sweet Talk

Prerequisite: Breeder Class, Persuasion and Pokémonology modifier of at least 2

Once per Complete Time Block, you can Sweet Talk any pokémon. When doing so, they'll at least stop to listen to what you have to say. If this results in a Skill Check, you may use half of your Charisma category value (rounded up) instead of the relevant Skill modifier.

Best Friends Forever

Prerequisite: Breeder Class, Charisma category of at least 12

The pokémon that is in your party have 2 different stats raised by 1. Then, this same pokémon gains 1 more stat in another different stat for every 5 numbers you have with the Charisma category.

High Cuisine

Prerequisite: Chef Class, Precision and Reflexes modifier of at least 2

You gain the ability to prepare Advanced Dishes. If you gain this effect again, you gain a bonus of +1 in the Precision Skill Check to prepare a Dish.

When preparing any Dish, you may spend 1 additional Short Time Block to double its sell value.

Food Pocket

Prerequisite: Chef Class, Dexterity category of at least 12

Your pokémon gains 1 additional Held item slot that can only fit in Dish items.

Additionally, when your pokémon enters the battlefield, if they're holding a Dish item, they receive your Dexterity category value as temporary Stamina, like the Shield keyword, for 2 rounds.

Famous Celebrity

Prerequisite: Coordinator Class, Performance and Persuasion modifier of at least 2

Sometimes, you're able to enter places you weren't supposed to because of your fame.

Additionally, at the GM discretion, shops give you discounts, up to 25%.

Season Finale

Prerequisite: Coordinator Class, Charisma category of at least 12

Every time you change from the **Tear Down** to the **Build Up** stage, or vice-versa, you gain 1 Climax counter. Once per battle, right after you reach 4 Climax counters, you receive the following bonuses:

- You recover Morale equal to half your Charisma category value. This effect may make your Morale go above its maximum limit;
- You gain 1 additional Standard and Interrupt action this round;
- Until the end of the battle, your Techniques cost 1 less Morale.

Dojo Master

Prerequisite: Fighter Class, Strength and Reflexes modifier of at least 2

When any of your Pokémon makes a Skill Check of a Skill from the Physique or Dexterity category, it receives a bonus of +3 to it.

Expanded Fighting Knowledge

Prerequisite: Fighter Class, Physique category of at least 12

You learn 1 additional tier III move from your Martial or Spiritual Art coverage.

Additionally, when your Pokémon rolls to hit a move or make a damage roll for the Heal or Shield keyword, both from a Martial Move, if the relevant stat is less than half your Physique category value (rounded up), they may use it instead.

Escapist

Prerequisite: Grunt Class, Cunning and Deception modifier of at least 2

Your Movement Speed is calculated based on your Cunning or Deception (whichever is higher) instead of your Athletics.

Additionally, you gain a bonus of +2 to any Skill Check of any kind of escape.

Hidden Needle

Prerequisite: Grunt Class, Dexterity category of at least 12

When your Pokémon inflicts a Status Condition or Debuff in another Pokémon, the target loses Stamina equal to your Pokémon's tier. If the target is an allied Pokémon, it recovers the same amount as Stamina instead.

If this effect is triggered by a move affected by the Status Vial effect, the amount of Stamina lost/recovered is instead equal to your Dexterity category value.

Professional Equipment

Prerequisite: Medic Class, Knowledge and Survival modifier of at least 2

You can now buy a Portable Healing Machine for P\$ 600. These have 2 charges of battery, that can be recharged by letting it gather sunlight for 1 Extended Time Block. You can spend charges the following way:

- For 0 charges, you can use it for the same effects as a First Aid Kit;
- For 1 charge and by spending 1 Short Time Block, you may recover 50% of the Maximum Stamina of 1 Pokémon;
- For 2 charge, you may treat 1 Injury from up to 3 Pokémon;

Advanced Treatment

Prerequisite: Medic Class, Intelligence category of at least 12

The first time you apply your treatment to a Pokémon, they gain a Healthy counter until the end of the battle. While a Pokémon has a Healthy counter, they roll 3 additional dice on their damage reduction rolls and their damage rolls when they're targeted by a move with the Heal keyword.

Your Treatment gains 1 more level as well.

Intuitive Expertise

Prerequisite: Strategist Class, Intuition and Pokémonology modifier of at least 2

When you make any Skill Check related to Pokémon, you may use half of your Pokémonology modifier (rounded up) instead of the asked one.

Otherwise, if the Skill Check is not Pokémon-related, you may use half of your Intuition modifier (rounded up) instead of the asked one.

Hard Read

Prerequisite: Strategist Class, Willpower category of at least 12

You can set up trigger conditions with Counter Measure as a Free action.

Additionally, when you successfully activate Counter Measure, if its VL was 2 or lower, recover 2 Morale and trigger “X% Paralysis” on the trainer of the triggering pokémon. X is equal to your Willpower category value x 5.

If this effect would inflict Paralysis on a trainer already in Paralysis, they lose 2 Morale instead.

Private Tutor

Prerequisite: Tutor Class, Pokémonology and Perception modifier of at least 2

Your proficiency with pokémon moves become more widespread, as such, trainers may ask you to teach their pokémon one of your Tutor Moves.

These trainers have a budget of P\$ 750 for a tier II move or up to P\$ 1250 for a tier III move, but the price they’ll accept is at the GM’s discretion.

Signature Teaching

Prerequisite: Tutor Class, Intelligence category of at least 12

Choose one of the following effects (where X is equal to your Intelligence category value, always rounded up):

- “The user can choose to trigger X% [Status Condition]”, with you choosing the Status Condition;
- “Sharpness (X/2)%”;
- “The user recovers X Stamina.”;

When you teach any of your pokémon a move, the move gains the chosen effect. You can spend 1 TC to give an already known move the chosen effect as well.

The chosen effect can’t be stacked multiple times on the same move.

Chapter 5

Adventuring

Time Blocks

Time Blocks are the core system and unit of measurement of out of combat activities. They serve as a base of your in-game pacing, going from your not realistic and fast paced adventure in the games to an strategic war game based on Pokémon Conquest. They come in 3 measures: Short, Extended and Complete, better described below:

- Short Time Blocks are your standard quick activity, such as training or, for a fast pacing game, lunching or playing with your pokémon.
- Extended Time Blocks are your usual time consuming activity, such as sleeping or crafting items. It's recommended that 1 Extended Time Block equals at least 3 Short Time Blocks.
- Lastly, Complete Time Blocks are the amount of time usually equal to a day, week or month, as such, there isn't an activity that lasts this amount. Complete Time Block should equal about 24 Short Time Blocks.

GM Tip: As you can see, the standard Time Blocks of 8/3 align easily with an hour, for Short Time Blocks, 8 hours (usual sleep time), for Extended Time Blocks and a day for Complete Time Block.

So, it would be wise to always try to align these Time Block with other easily readable time spans, such as 7/4, for Short Time Block equals a day, an Extended being equal to a week and a Complete being equal to a month.

Training

Training is the core bulk of how you will spend your free time in the sessions. Almost everything you need your pokémon to learn, you need it to teach it beforehand with a Training Cycle (TC for short).

A Training Cycles is done by spending a Short Time Block teaching your pokémon Training Stats, Moves, Traits or other features. You can choose to make a TC either Guided or Overseen, which will have their differences explained later.

You can train as many of your own pokémonas you want, but by doing so, they will learn the exact same thing. For example, you can do 1 Training Cycle to train your pokémon into gaining 1 Attack LTS, but if you want to teach your Oddish the move Absorb, then you must do 1 Training Cycle teaching Absorb, which will only benefit pokémon who can learn this move.

Besides what you will train, you can also choose how you will train them. For a more efficient and empathetic, but harder, way, you can show and train together with your pokémon, making a Guided Training. By doing so, you do the training alongside your pokémon, either hands on aiding or exemplifying in practice.

When doing so, you will have to roll a Skill Check DC 7 of a Skill based on your method of training, defined by the GM. In a success, you complete that training as usual and befriend your pokémon a little bit more. In a result 12 or above, it also only takes half as much time (rounded up). On a failure, the pokémon doesn't become exhausted, but you do, so this TC counts towards the trainer Guided TC limit, while it doesn't count to your pokémon TC limit.

Alternatively, for a more laid back, but more reliable and less energy draining method for the trainer, you can do an Overseen training, where you only command your pokémon what they must do. This training doesn't ask you for any Skill Checks.

As you may have guessed, training is exhausting, and as such, both you - as a trainer - and your pokémon will become fatigued by spending enough time training. In a Complete Time Block, **your pokémon can do up to their Friendship + 1 in TC**, to a minimum of half their level (rounded up). You can try to train your pokémon more than this, but this will not only hurt them, but make them dislike you.

On the other hand, the trainer can do countless Overseen trainings, however, they can only do **the sum of both your Endurance and Perception modifier in Guided TCs**, to a minimum of half your trainer Level (rounded up).

At last, you can try to multi-task your Overseen trainings, as such, teaching different things during the same TC. When doing so, roll a Perception or Persuasion Skill Check with a DC equal to 6 + 2 for every different training you're doing simultaneously.

In a success, all the training went smoothly. In a failure, you couldn't guide all your pokémon doing different things at the same time, as such, only 1 of your trainings succeeded. However, this failed TC still counts towards the limit of TC your pokémon can do in a Complete Time Block.

When you don't have anything new to teach your pokémon, you still have to keep them in shape. For that, you can do a Maintenance Training, which can be multitasked without any Skill Check required.

If you neglect your pokémon training, for every 2 Complete Time Blocks your pokémon passes without doing any training, your pokémon loses 1 random LTS and GTS that they had, as well as some friendship.

The things you can teach your pokémon through a training are the following:

- To increase your pokémon characteristics with a Lesser Training Stat, you spend 1 TC for every point spent on that characteristic.
 - ◊ For example, 1 TC can train your pokémon in either +1 Speed or +2 Accuracy, as both cost only 1 LTS point;
- To increase your pokémon characteristics with a Greater Training Stat, you spend 3 TC for every point spent on that characteristic.
 - ◊ Follow the same rules as the Lesser Training Stat;
- To teach your pokémon a new move, you spend 1 TC for every tier of that move. A move which had its tier changed cost as its new tier.
 - ◊ Forgetting an old move doesn't cost anything!
- To teach your pokémon a new trait, you spend 1 TC +1 for every non-additional trait that your pokémon gained.
 - ◊ That basically means that the trait cost as much TCs as the tier that you acquired it;
- You can spend 1 TC to Upgrade one of your moves that you could learn it even if it were 1 tier above;

➤ The maintenance training always costs 1 TC.

➤ No matter what the training that it makes, the trained pokémon will level up once, up to your trainer's Level.

Reminder¹: You don't need to do all the TCs needed all in one go, you can make it slowly during various Extended and/or Complete Time Blocks.

Reminder²: Training Cycles are not equal to Training. For instance, some effects, like the Guided training Skill Checks, make you roll once per training, not per TC.

Retraining

Sometimes your focus shifts and now you want your pokémon to do something else and you want to try new possibilities of what they can do. When this happens, you may need to retrain your pokémon.

Retraining can go in one of these ways:

- Moves doesn't take any time to forget;
- You can spend 3 TCs to forget all your traits;
- If you want to retrain completely, losing all your moves, traits and changing your pokémon's archetype, you need to spend 6 TCs.

Catching Pokémon

As a pokémon trainer, it's only natural that you'll try to catch some pokémon that you encounter through your adventure. As such, you'll need to know some aspects about pokémon capture.

The basis of the pokémon capture are the following:

- You can throw pokéballs up to 4 meters away from you, raised by 2m for every positive modifier in Strength modifier;
- To start catching a pokémon, roll a Counter Skill check: your Precision against the pokémon's Reflexes (see the Chapter 2 - Pokémon Skill Check);
- In a success, the pokéball hits, continue the instructions, if not, the pokéball miss, but you can pick it up to throw it again;

- Pokémons inflicted with Frostbite or Paralysis have a penalty of -2 to avoid the pokéball, while pokémon in Sleep fail automatically;
- Then, roll a d20;
- The DM has to choose a value to be the catch rate (more information to GMs in page X);
- Apply the pokéball's modifier to the catch rate;
- If the result is lower or equal to the Catch Rate, you captured the pokémon!

Friendship

Every trainer has a connection of some sorts with their pokémon. As the time battling together continues, this connection will increase and such, you and your pokémon start to act as one. Friendship is the meter of how big is that connection with your pokémon.

Your Friendship with your pokémon is assigned a level from -5 to 10, and usually starts at 0. Depending on the circumstances of how you obtained that pokémon, they may start from a little less or a little more. Most of the circumstances are the following:

- A pokémon which didn't like to be caught, as you fought against them while they wanted just to run away or if they were first captured by other methods that isn't a pokéball, will have its Friendship started at -1.
- In most cases of a capture in battle, their Friendship will start at 0, as they wanted to fight but didn't expected to lose.
- When a pokémon likes you before you catch them, as you accept their challenge to battle or you befriended them before trying to capture them, they will have their Friendship stat at 1.
- If your pokémon was obtained by trading, their Friendship will start as 2 numbers lower than the old trainer, up to 0, in case of a positive Friendship value or as 1 number higher, up to 0 as well, if their trainer had a negative Friendship value.
- If your pokémon was a starter or hatched from an egg, their Friendship will start as 2.

After that, the Friendship can be either increased or decreased by your actions. Usually, after an important battle, every pokémon used will gain +1 in their Friendship value, but you can also increase it by continuous good care.

However, your continuous negligence with your pokémon, like not using them in battle, not making them train regularly or letting them faint constantly, can lower your Friendship with them.

Positive Friendship

As you raise your pokémon Friendship, you and them become in sync. The maximum Friendship is 10, and as your friendship with your pokémon increases, you gain the following bonuses:

- With Friendship 4, you only need to spend 3 TCs instead of 6 to completely retrain your pokémon. Additionally, other trainers can teach them new moves.
- With Friendship 6, making any training with them will take 1 TC less, to a minimum of 1.
- With Friendship 10, once per battle, thanks to their trust in you, when they leave the battlefield, they can spend a Free action to be cured from 1 Status Condition and set all their stats with negative stat stages to their base stat stage.

Negative Friendship

Sadly, not every pokémon trainer views their pokémon as friends. Some of them see them as a mere tool or weapon that they can use to take advantage of the others.

When the pokémon is continuously neglected, their Friendship can lower to below 0, up to -8. However, as their Friendship sinks, you suffer the following penalties:

- A pokémon at Friendship below 0 suffer all the following effects:
 - ◊ The Guide Training DC is raised by 1 for every level below 0;
 - ◊ Retraining costs double the normal amount of TCs;
 - ◊ Every time you command your pokémon to use a move in battle, you need to roll a dice. If the result is 1, you need to make an Obedience Check.

The dice is a d8 at -1, and has its category decreased by 1 for every level below 0, up to d1 at -5.

Obedience Check

Sometimes, you and your pokémon disagree, that being because of your bad relationship or because you're commanding them to do something that they really don't want to do.

When this happens, you make an Obedience Check, which is a Persuasion Skill Check with DC 8 + 1 for every point in Friendship below 0. In a success, the pokémon follows your command. In a failure, your pokémon does what they actually want to do.

Recovering

As you go through your journey, you're fated to enter in pokémon battles. As such, your pokémon Stamina will deplete and your pokémon may even become injured.

With that in mind, recovering from the battles is one of the most common occurrences through your adventure. While in a city Pokémon Centers will be able to quickly heal your pokémon to perfect health, however, when that isn't an option, you must find other methods to recover your pokémon. These methods will be described in this sub-chapter.

Injuries

While most of the damage taken in battle can be easily healed with some rest, some attacks will damage your pokémon so much that they need a medical solution to it. When this happens, your pokémon will gain an Injury.

While in battle, your pokémon don't gain injuries, but Injury counters, which can be acquired as follows:

- If the instance of damage that reduced your pokémon's Stamina to 0 deals more than 50% of their maximum Stamina (rounded up) than what was necessary to reduce it to 0, they gain 1 Injury counter;
- If your pokémon takes more than 50% of their maximum Stamina (rounded up) as damage from only 1 instance of damage, they gain 1 Injury counter;

➤ If your pokémon's Stamina is reduced to 0, you gain 1 Injury counter;

At the end of the battle, every Injury counter is converted into an Injury.

For each Injury your pokémon have, their maximum Stamina is reduced by 5%, up to 50% (rounded down). Gaining more injuries after that would be life threatening and in need of emergency medical care.

Natural Recovery

While you're just walking, eating or doing mundane actions, you're considered in Natural Recovery, as you're letting your own body deal with it.

This is the slowest recovery action, but it recovers 10% of your maximum Stamina per Extended Time Block.

Resting

Sometimes, you're just a little beat down, not enough to need to sleep through but enough to need some time recovering. For that, what you can do is Resting.

To rest, you need to stay mostly idle (as not doing anything worth a Skill Check) and in a comfy place.

For humans, a comfy place that would be keeping you heated, but for pokémon other ways could be better, such as letting Grass types on the sun or keeping an Ice type cool.

This Recovery Action takes an Extended Time Block and recovers 25% of your maximum Stamina.

Pokémon inside their pokéballs are always considered Resting.

Sleeping

After a long day of traveling and training, you will need to sleep to recover your energy.

This Recovery Action takes an Extended Time Block and recovers 50% of your maximum Stamina, however, it can only be done once per Complete Time Block.

Human Injuries

When you live in a world with fantastical creatures with elemental powers, being attacked by them is not an uncommon happening, and as such, injuries may occur. Unlike pokémon, trainers don't have Stamina, so how do we know the attack you received is worth an injury?

When your trainer is attacked by a damaging move, do the following:

- Firstly, the attacking pokémon rolls to hit, as usual. If the attack have as much success as half your trainer's Dexterity + your trainer's Reflexes modifier, you've taken the move;
- Then, the pokémon roll for damage as usual, even including critical hit and type effectiveness (if your trainer gained resistance to a type through any effect);
- If the move deals more damage than the following formula, you gain 1 injury;
 - ◊ $15 + \text{your Level} \times (\text{your Endurance modifier} + 2) + \text{your Level}$
- If the move deals more than double the necessary damage, you take 2 Injuries and become knocked out instead.

Healing Moves

League Rules

The League is the authority in the world of pokémon when the matter is pokémon battling. From the gym challenges, battle frontier or battle subway, this institution rules above them all.

In a League Battle, to create a fair fight, independent of how much money you have, trainers can't distribute held items or use consumables freely.

For that, the League uses a system of points that limits how many of those items you can use. This limit takes into account the challenger's number of badges, which the Gym Leader will battle with the same amount of points. It works in a system of points, as the following:

- Every challenging group starts with 3 points, with 2 additional for every Badge the trainer have;
- Berries (held or used) cost 1 point;
- Potions, Ethers, Antidotes, Burn Heals, Awakenings, Ice Heals and Paralyze heals, all of them also cost 1 point;
- Super Potion, Full Heal, Max Ethers and any non-berry held items cost 2 points;
- Hyper Potions, Revives and Elixirs costs 3 points;
- Full Restores, Max Revives and Max Elixirs costs 5 points;

Chapter 6

Items

Pokémon Dollar

As expected, money is the blood of the mercantile system of the Pokémon world. While each country may have its own currency, for the sake of ease of use, the Pokémon League and its associate shops use a currency known as Pokémon Dollar (or PokéDollar for short). As such, almost everything that is related to pokémon battle is sold for PokéDollar, and on the other way, cash rewards from pokémon battle — including the ever present Bet Battle, where both sides bet their money on whoever is the better trainer — usually is given through PokéDollar.

In the modern pokémon world, paper currency doesn't circulate as much, instead everything is linked to the newest trainer tool's account, from PokéGear to PokéNav, then Pokétch, and now the modern PoryPhone and RotomDex, these devices are your all encompassing technologies from the pokémon world, that provide trainers with an easy access to a money transferency service as well.

Consumables

While you're constantly moving through places, sometimes you'll need something to fuel your journey, that being pokéballs to catch new pokémon, potions to recover their Stamina or berries to give them a little boost in an important battle.

Industrial Healing Items

These items are made in a spray bottle shape, as such they're able to be used on pokémons up to 7m away from you. However, their powerful curative effects temporarily drain your pokémon energy, as such, they become in action Debt.

Stamina Healing

Potions heal a flat amount of Stamina based on the trainer's amount of Greater Training Stats (GTS). They're one of the most common items, with the more basic ones being found in basically every city. When used during battle, your pokémon becomes in Standard action Debt.

Status Healing

These items heal permanent status conditions. Antidotes are common in every city, while Ice heal is also common in snow areas and Burn heal in hot areas. The others are found just in bigger cities. When used in battle, your pokémon becomes in Quick action Debt.

Image	Name	Healing	Price	Image	Name	Conditions	Price
	Potion	8 x (GTS + 2)	P\$100		Antidote	Poison	P\$150
	Super Potion	14 x (GTS + 2)	P\$200		Paralyze Heal	Paralysis	P\$150
	Hyper Potion	24 x (GTS + 2)	P\$300		Awakening	Sleep	P\$200

Image	Name	Healing	Price	Image	Name	Conditions	Price
	Max Potion	100% Stamina.	P\$500		Burn Heal	Burn	P\$150
	Full Restore	100% Stamina. Also cure all status conditions.	P\$750		Ice Heal	Frostbite	P\$150
					Full Heal	All permanent ones	P\$350

Industrial Items

Other Healing Items

Revives are able to recover knocked out pokémon's Stamina, awakening them in the process. They can only be used at melee range. If a Revive is used in a pokémon not knocked out, they become in Standard Action Debt.

Ethers and Elixirs are able to reduce the Cooldown of your pokémon's moves. Like the Industrial Healing item, these come in spray bottles, as such, can be used on pokémon up to 7m away from you.

Basic Balls

These items can be found in basically any city and are the core foundation of all the modern pokémon world and the dream of becoming a pokémon trainer.

In most pokémarts, you're gifted 1 Premier Ball for every 5 pokéballs you buy.

Image	Name	Effect	Price	Image	Name	Effect	Price
	Revive	Recover 50% of their Stamina.	P\$500		Pokéball	x1	P\$50
	Max Revive	Recover 100% of their Stamina.	P\$750		Great Ball	x1.5	P\$150
	Ether	-1 Cooldown to one move.	P\$200		Ultra Ball	x2	P\$300
	Max Ether	-3 Cooldown to one move.	P\$400		Premier Ball	x1	P\$0
	Elixir	-1 Cooldown to all moves.	P\$500				
	Max Elixir	-3 Cooldown to all moves.	P\$1.000				

Herbal Healing Items

These items are a cheaper and stronger version to industrial healing items, however, they come at the cost of your friendship with your pokémon: they taste bad and can damage your relationship with them. These items can be crafted by yourself or bought at herbal shops. Like their industrial counterpart, using these make your pokémon become in Action Debt and when using in a League Battle costs the same amount of points.

Image	Name	Effect	Action Debt	Counterpart	Price
	Spark Powder	Recovers 9 x (GTS + 2) in Stamina.	Standard	Potion	P\$75
	Energy Powder	Recovers 16 x (GTS + 2) in Stamina.	Standard	Super Potion	P\$150
	Fast Jam	Reduces the cooldown of one move by 2.	Quick	Ether	P\$150
	Heal Powder	Cures every Status Condition.	Quick	Full Heal	P\$250
	Treatment Gel	Can be passed on a pokémon to treat them, working exactly like bandages. This item doesn't reduce the friendship, but spoils in 4 Complete Time Blocks.	-	-	P\$40
	Vitality Powder	Recovers 27 x (GTS + 2) in Stamina.	Standard	Hyper Potion	P\$200
	Complete Powder	Recover 100% of its Stamina and cure from any Status Condition.	Standard	Max Potion	P\$550
	Quicken Jam	Reduces the cooldown of every move by 2.	Quick	Elixir	P\$500
	Revival Herbs	Recovers 75% of their Maximum Stamina. Can be used on pokémon knocked out, awakening them.	Standard	Revive	P\$400
	Magna Herba	Recovers 100% of its stamina, cures from every Status Condition and reduces the cooldown of all moves by 4. Can be used on pokémon knocked out, awakening them.	Standard	Max Revive	P\$1.200

Berries

These are fruits that, besides their good taste, have benefits that also make them useful in battle. They can also be found all over the world, and some may even be able to plant them in a Berry Pot, growing their own tree while they are traveling.

Berries have miscellaneous effects and can only be used on your pokémon by being in Melee range. Using this way also makes them become in Standard action Debt. Alternatively, your pokémon can hold the berry to eat them usually after happening its trigger condition.

Basic Berries

Ordinary berries that can be found almost anywhere, however, they can grow fruits faster than normal. They take 6 Complete Time Blocks to grow into a tree and then 1 Complete Time Blocks to grow fruits.

Image	Name	Effect	Percentage	Price
	Oran Berry	Roll its HP stat as d2 and recover the result as Stamina.	50%	P\$125
	Cheri Berry	Cure Paralysis. Triggers when they are inflicted Paralysis.	Any	P\$200
	Chesto Berry	Cure Sleep. Triggers when they are inflicted Sleep.	Any	P\$250
	Pecha Berry	Cure Poison. Triggers when they are inflicted Poison.	Any	P\$200
	Rawst Berry	Cure Burn. Triggers when they are inflicted Burn.	Any	P\$200
	Aspear Berry	Cure Frostbite. Triggers when they are inflicted Frostbite.	Any	P\$200
	Persim Berry	Cure Confusion. Triggers when they are inflicted Confusion.	Any	P\$200
	Magost Berry	Cure Infatuation. Triggers when they are inflicted Infatuation.	Any	P\$200
	Leppa Berry	Trigger when you use a move with Cooldown 2 or higher. The triggering move's cooldown is reduced by 2.	Any	P\$200
	Razz Berry	If you try to catch a pokémon who ate this berry, reduce 2 from the d20 roll.	-	P\$100

Type Berries

These are berries that trigger when hit by a damage move of a certain type and then make you resist that move 1 step further. They take 5 Complete Time Blocks to grow into a tree and then 2 Complete Time Blocks to grow fruits. These berries are usually found in the habitat of pokémon of the same type as the berry's triggering type.

Image	Name	Type	Price	Image	Name	Type	Price
	Occa Berry	Fire	P\$250		Payapa Berry	Psychic	P\$300
	Passho Berry	Water	P\$200		Tanga Berry	Bug	P\$200
	Wacan Berry	Electric	P\$250		Charti Berry	Rock	P\$200
	Rindo Berry	Grass	P\$200		Kasib Berry	Ghost	P\$250
	Yache Berry	Ice	P\$300		Haban Berry	Dragon	P\$300
	Chople Berry	Fighting	P\$250		Colbur Berry	Dark	P\$250
	Kebia Berry	Poison	P\$200		Babiri Berry	Steel	P\$300
	Shuca Berry	Ground	P\$200		Chilan Berry	Normal	P\$200
	Coba Berry	Flying	P\$200		Roseli Berry	Fairy	P\$250

Stat Berries

These berries raise one stat when the pokémon's maximum Stamina drops below 35%. They take 4 Complete Time Blocks to grow into a tree and then 2 Complete Time Blocks to grow fruits.

Image	Name	Stat/Effect	Price	Image	Name	Stat/Effect	Price
	Liechi Berry	Attack	P\$250		Petaya Berry	Special Attack	P\$300
	Ganlon Berry	Defense	P\$200		Apicot Berry	Special Defense	P\$200
	Salac Berry	Speed	P\$250		Micle Berry	Accuracy	P\$200
	Nomel Berry	Evasion	P\$200		Starf Berry	Random by 2 instead	P\$250
	Lansat Berry	Until you switch out, your moves gain "Margin of Critical Hit +2".	P\$200		Custap Berry	Until the end of the next round, as a Free action that can be used outside of your turn, you can give one of your moves "Priority 1 (Attack)".	P\$250

Rare Berries

These berries have diverse and powerful effects, but they can't be easily found. They also take much more type to grow fruits than normal. They take 6 Complete Time Blocks to grow into a tree and then 3 Complete Time Blocks to grow fruits.

Image	Name	Effect	Percentage	Price
	Sitrus Berry	Roll their HP stat as d4 and recover the result as Stamina.	50%	P\$350
	Lum Berry	Cure any Status condition. Trigger it when any Status Condition is inflicted to you.	Any	P\$400
	Figy Berry	Roll its HP stat as d6 and recover the result as Stamina. Causes Confusion on pokémon whose Primary Signature Stat is Special Attack.	25%	P\$500
	Wiki Berry	Roll its HP stat as d6 and recover the result as Stamina. Causes Poison on pokémon whose Primary Signature Stat is Attack.	25%	P\$500

Image	Name	Effect	Percentage	Price
	Mago Berry	Roll its HP stat as d6 and recover the result as Stamina. Causes Infatuation from a random pokémon on pokémon whose Primary Signature Stat is HP.	25%	P\$500
	Aguav Berry	Roll its HP stat as d6 and recover the result as Stamina. Causes Frostbite on pokémon whose Primary Signature Stat is Defense.	25%	P\$500
	Iapapa Berry	Roll its HP stat as d6 and recover the result as Stamina. Causes Burn on pokémon whose Primary Signature Stat is Special Defense.	25%	P\$500
	Nanab Berry	Roll its HP stat as d6 and recover the result as Stamina. Causes Paralysis on pokémon whose Primary Signature Stat is Speed.	25%	P\$500
	Jaboca Berry	Triggers when they're hit by a Physical move. The target loses 20% of their maximum Stamina.	Any	P\$450
	Rowap Berry	Triggers when they're hit by a Special move. The target loses 20% of their maximum Stamina.	Any	P\$450

Dish Items

These items are fancy consumable items that can both give you powerful effects and feed you or your pokémon. These items can be made with a Cooking set or bought at restaurants.

All lingering effects of the following items are lost on switch out.

Image	Name	Effect	Trigger	Price
	Berry Juice	Roll its HP stat as d8 and recover the result as Stamina.	Stamina drops below 50%	P\$575
	Mushroom Curry	Cures Poison and Sleep. After that, they gain immunity to both for the next 4 rounds.	You're inflicted Poison or Sleep	P\$300
	Ember Tea	Cures Burn. After that, your next move gains "50% Burn".	You're afflicted with Burn or your Stamina drops below 50%	P\$450
	Leek Salad	Recovers 8 x (GTS + 2) of Stamina. After that, recover 10% of your maximum Stamina at the start of the next 3 rounds.	Stamina drops below 50%	P\$250
	Colorful Salad	Raise the stat that was lowered by 2 stages. After that, for the next 2 rounds, your stat stages can't be lowered.	One of your stat stages is reduced	P\$300

Image	Name	Effect	Trigger	Price
	Steadfast Cookies	Cures Flinch. Then, your Speed stat stage is raised by 1 and your Initiative is raised by 5.	You're inflicted Flinch	P\$500
	Potato Chowder	Raise your Defense and Special Defense by 2 stages.	Stamina drops below 30%	P\$550
	Ninja Curry	For the next 3 rounds, your Evasion base stat stage is raised by 1. Additionally, your next move gains "Margin of Critical Hit +2".	Stamina drops below 50%	P\$900
	Rindo Bean Cake	Roll your HP stat as d8 and recover the result as Stamina. Additionally, until the end of your next turn, you resist every type one step further.	Stamina drops below 50%	P\$1.000
	Leppa Berry Cake	Set the triggering move's cooldown to 0. Then, until the end of your next turn, all moves that you use have their cooldown reduced by 1.	You use a move with cooldown of at least 2	P\$1.200

Advanced Balls

Apricorn Balls

These pokéballs are easy enough that they can be crafted using a Pokéball Kit, but their niche uses make so they're aren't usually industrially manufactured, as such only specialized shops sell them.

Image	Name	Effect	Price
	Luxury Ball	1x. The pokémon caught with this pokéball starts with +2 Friendship.	P\$300
	Dive Ball	1x. Raised to 2x if the pokémon was swimming or underwater.	P\$250
	Friend Ball	1x. Raised to 2x if the pokémon evolves with Friendship.	P\$250
	Heal Ball	1x. The pokémon caught with this pokéball recovers the double of the usual recovered Stamina with the Resting actions.	P\$250
	Repeat Ball	1x. Raised to 2x if the pokémon was encountered together in a group of 4 or more of the same species.	P\$250
	Moon Ball	1x. Raised to 2x if the pokémon can evolve with an evolutionary stone.	P\$250
	Fast Ball	1x. Raised to 2x if the pokémon has Speed as their Signature stat.	P\$300

Advanced Balls

Complex Balls

These balls need specialized work to make, as such, they cost more and are sold just by specialized shops. They can still be crafted, but require a lot more experience.

Image	Name	Effect	Price
	Heavy Ball	1x. Raised to 3x if the pokémon weight is L or above.	P\$500
	Lure Ball	1x. Raised to 2.5x if the pokémon is in some Status Condition.	P\$400
	Dusk Ball	1x. Raised to 2.5x if the pokémon is in the dark.	P\$400
	Love Ball	1x. Raised to 2.5x if the pokémon is in the same Egg Group as your pokémon.	P\$400
	Level Ball	1x. Raised to 2.5x if the pokémon is in its final stage.	P\$400
	Timer Ball	1x. Raised by 1x for every 2 rounds since the battle began, up to 3x.	P\$400
	Fast Ball	1x. Raise to 3x if used in the first round of the battle.	P\$500

Materials

Materials

These items aren't useful by themselves, but they can be used by artisan or trainer to craft other useful items, such as Pokéballs and Medicines. It's rare to find them in shops, but specialized shops may have them.

Image	Name	Description	Where is found	Price
	Tumblestone	This is one of the prime materials to the Basic Balls. Easy to use, but not as resilient.	Uncommon, but it can be found in almost any area.	P\$25
	Black Tumblestone	This is one of the prime materials to Advanced Balls. It's pretty hard, making it better at catching pokémon, but worse to work with.	Uncommon, it can only be found inside caves, especially deep within.	P\$75
	Sky Tumblestone	This is one of the prime materials to Complex Balls. The perfect balance of malleability and resilience.	Rare, but it can be found in almost any area. More common in mountain peaks. Terravores find it tasty.	P\$150
	Iron Chunk	This is one of the prime materials used to craft powerful Balls.	Uncommon, but it can be found both in caves and mountains.	P\$75
	Black Apricorn	A dark colored apricorn. It's extremely fragile to sunlight and should be handled in a dark place.	Rare, it can only be found in dense forest and blossoms by the night, but wither in the daylight.	P\$200
	Blue Apricorn	A sea colored apricorn. It has some connection to Water types.	Uncommon, it can be found especially around lakes or near beaches.	P\$150
	Green Apricorn	A leaf colored apricorn. It's common and easy to work with.	Common, it can be found in forests or grassfields.	P\$150
	Pink Apricorn	A peach colored apricorn. Pokémon love them, as it's also edible.	Uncommon, it can be found in almost any area.	P\$150
	Red Apricorn	A fire colored apricorn. These apricorns are bigger than usual, so it usually yields more pokéballs than other colors.	Uncommon, it can be found in dense forests.	P\$150
	White Apricorn	A snow colored apricorn. This apricorn likes cold temperatures, as such, it becomes softer after being	Uncommon, it can be found in snowy areas.	P\$150

Image	Name	Description	Where is found	Price
	Yellow Apricorn	heated. A sun colored apricorn. Apricorn trees only yield this color when exposed to sunlight almost all the time.	Rare, it's found especially in mountains and savannas.	P\$200
	Bugwort	An extremely common flower with medicinal properties, but bad taste.	Common, it can be found almost everywhere.	P\$25
	Medicinal Leek	A water-hungry vegetable that has medicinal properties.	Uncommon, it can be found near rivers and lakes.	P\$50
	Pep-Up Plant	A spicy plant that is used that recovers energy and can treat statuses.	Uncommon, it can be found in plateaus and mountains.	P\$50
	Hearty Grains	A grain with a variety of uses in culinary.	Common, can be found near rivers and lakes.	P\$35
	Vivichoke	A flower that can recover knocked out pokémon.	Rare, it can be found near lakes.	P\$125
	King's Leaf	A rare and shiny herb that serves as a catalyzer to powerful medicines.	Rare, but it can be found in almost any area.	P\$200

Crafting

Pokéball Crafting

With Ball Tool Box, you can make any type of pokéball, with the right knowledge and materials. Each ball takes a Short Time Block, its necessary materials and a General Knowledge Skill Check to be crafted. In a failure, the ball made is defective and has a modifier of +2 on the d20 to catch a pokémon. Complex Ball can only be crafted by a trainer with the Advanced Crafting feat.

Culinary Recipes

With a Cooking set, you can make a variety of recipes for you or your pokémon to eat. Each recipe takes a Short Time Block, their necessary materials and a Precision Skill Check to be made. In a failure, the item tastes bad and will damage your relationship with your pokémon if they eat it. Advanced Recipes can only be crafted by a trainer with the Advanced Culinary feat and take 2 Short Time Blocks to be produced.

Herbal Medicines

With at least a Survival modifier of +1, you can try to craft the following medicines.

Each recipe takes 2 Short Time Blocks, their necessary materials and a Survival Skill Check to be crafted. In a failure, you wasted some materials in the process and will take 50% more (rounded down) to finish it. You can also choose to change a recipe using Bugwort for Medicinal Leek for a better taste and to not damage your relationship by using the item.

Advanced Recipes can only be crafted by a trainer with the Advanced Herbology feat.

TMs

As both technology and pokémon battles advanced, people started to tinker new ways into teaching your pokémon new moves. Through research on what moves are easier to teach, scientists created a hyper-efficient guide to teach a pokémon some specific move.

However, as there are an infinite amount of moves, some TMs may be more common in some regions than others, as such, which TM you'll encounter in your journey may vary a lot.

As they're the top end of pokémon battle technology, they're usually given as rewards from trainers doing Gym Battles or those who accomplished something important in their journey.

A pokémon can learn any TM as if it were a non-natural coverage move, however, they can never be Upgraded. They also cannot learn a TM of a move which one its types are opposite to, as described below.

- **Bug:** Dragon, Water;
- **Dark:** Electric, Psychic;
- **Dragon:** Fairy, Normal;
- **Electric:** Ground, Dark;
- **Fairy:** Poison, Steel;
- **Fighting:** Ghost, Psychic;
- **Fire:** Water, Ice;
- **Flying:** Bug, Ground;
- **Ghost:** Normal, Fighting;
- **Grass:** Ice, Flying;
- **Ground:** Flying, Electric;
- **Ice:** Fire, Rock;
- **Normal:** Ghost, Dragon;
- **Poison:** Rock, Fairy;
- **Psychic:** Dark, Fighting;
- **Rock:** Poison, Grass;
- **Steel:** Grass, Bug;
- **Water:** Fire, Steel;

Evolutionary Items

While most pokémon can evolve with battle experience or with a close bond with their trainers, others may need the help of elemental items to reach their maximum potential.

These items are called Evolutionary Items and can be bought in shops in the biggest cities for P\$ 2000. A pokémon with this prerequisite may also evolve with Friendship 5 instead. However, by evolving with an Evolutionary Item they also gain one of the following Evolutionary Traits, based on the item that triggered their evolution.

Fiery Spirit

Prerequisite: evolved with a Fire Stone

Once per battle, you may spend a Free action to make your next Damaging move roll 2 additional damage dice.

Cleansing Water

Prerequisite: evolved with a Water Stone

Once per battle, you may spend a Free action to cure a pokémon up to 7m away from you from all their Status Conditions.

Sudden Thunder

Prerequisite: evolved with a Thunder Stone

Once per battle, you may spend a Free action to move up to half your Movement Speed (rounded up).

Healthy Leaf

Prerequisite: evolved with a Leaf Stone

Once per battle, you may spend a Free action to recover 15% of your maximum Stamina.

Cosmic Moon

Prerequisite: evolved with a Moon Stone

Once per battle, you may spend a Free action to reduce the cooldown of one of your moves by 1.

Sun Burn

Prerequisite: evolved with a Sun Stone

Once per battle, you may spend a Free action to give your next move 35% Burn.

Metalic Protection

Prerequisite: evolved with a Metal Coat

Once per battle, you may spend a Free action on any pokémon's turn to gain 2 additional dice on your next damage reduction roll.

King's Pride

Prerequisite: evolved with a King's Rock

Once per battle, you may spend a Free action to give your next move 35% Flinch.

Shine Bright

Prerequisite: evolved with a Shine Stone

Once per battle, you may spend a Free action to give your next move a bonus of +2 to hit.

Dusk Cloak

Prerequisite: evolved with a Dusk Stone

Once per battle, you may spend a Free action on any pokémon's turn to gain a bonus of +2 to avoid the next move targeting you.

Dawning Haste

Prerequisite: evolved with a Dawn Stone

Once per battle, right before you roll your Initiative, you may spend a Free action to give it a bonus of +3.

Icy Breeze

Prerequisite: evolved with a Ice Stone

Once per battle, you may spend a Free action to give your next move 35% Frostbite.

Held Items

While consumables are made to be used by the training, holding items are adapted so that the pokémon can use them in battle to increase their combat prowess. By default, each pokémon can hold only one item, which can be dropped or stolen by some effects.

Pokémon can pick up held items as a Quick action, but require a Standard action to be equipped. A picked item is dropped when the user receives damage or uses any move, but is automatically equipped if that pokémon switches out and spends 1 whole round inside their pokéball.

Some of these items may also break, when this happens, this item loses any of its effect and is immediately dropped.

Offensive Held Items

These items will help your pokémon to become even more threatening, either boosting its offensive stats, raising its chances to hit an opponent or countering possible responses to your pokémon.

Image	Name	Effect	Price
	Muscle Band	Your pokémon has their Attack increased by 2.	P\$500
	Wise Glasses	Your pokémon has their Special Attack increased by 2.	P\$500
	Protective Pads	Your pokémon's Melee moves can't trigger or be affected by any opponent's effect that specifies Melee moves.	P\$500
	Binding Band	When your pokémon applies the Binding keyword, the target loses 15% of their Maximum Stamina per round instead.	P\$600
	Grip Claw	When your pokémon applies the Binding keyword, it lasts 2 additional rounds.	P\$600
	Metronome	After your pokémon uses a damaging move, they gain 1 Metronome counter for that move. That move roll 1 additional damage die for every Metronome counter. All counters are lost when they use a move without a Metronome counter.	P\$700
	Wide Lens	Your pokémon's Accuracy base stat stage is raised by 2.	P\$900
	Type-Boosting Items	When buying this item, choose a type. Your pokémon's damaging moves of the chosen type gain "Damage Category +1".	P\$1.000

Defensive Held Items

These items will help your pokémon to stay in the battlefield, either boosting its defenses, reducing damage directly, recovering your Stamina or curing/preventing Status Conditions.

Image	Name	Effect	Price
	Air Balloon	Your pokémon becomes immune to the Ground type and Scatter keyword. This item breaks when they're hit by a non-Ground type damaging move.	P\$250
	Big Root	Your pokémon's moves with the Drain keyword gain "30% Drain".	P\$400
	Bright Powder	Your pokémon's Evasion base stat stage is raised by 1.	P\$500
	Focus Sash	Your pokémon acquires Sturdy as an additional trait. When they trigger the damage reduction from Sturdy, this item breaks.	P\$350
	Focus Band	When your pokémon would receive more than 35% of their maximum Stamina (rounded up) by a single damaging move, they can spend a Free action to roll a d4. On a 4, they only take 35% of their maximum Stamina (rounded up) in damage instead. After triggering this effect, they can't trigger it again until the end of the next round.	P\$650
	Shell Bell	All your pokémon's damaging moves gain "20% Drain".	P\$800
	Heavy-Duty Boots	Your pokémon becomes immune to the effects of Terrains and Hazards (not including the damage category increase).	P\$1,000
	Utility Umbrella	Your pokémon becomes immune to the effects of all Weathers, including the damage category increase, but not the defense increase.	P\$1,000

Utility Held Items

These items will help your pokémon in unconventional ways - may it be by being an actual bad item, but that your pokémon plans to pass onto your opponents or an item that functions specifically with your current strategy.

Image	Name	Effect	Price
	Quick Claw	Your pokémon gains a bonus of +4 to their initiative. Once per battle, at the start of the round or on switch in, they can spend a Free action to raise this value to +7 until the end of the round.	P\$500
	Eject Button	Once per battle, after your pokémon receives damage by a damaging move, trigger "Eject" on themselves.	P\$500

Image	Name	Effect	Price
	Eject Pack	Once per battle, after your pokémon has a stat stage reduced, immediately trigger "Eject" on themselves.	P\$500
	Weather Rocks	When buying this item, choose a Weather. When your pokémon summons the chosen Weather, it lasts 2 additional rounds.	P\$700
	Terrain Extender	When your pokémon summons a Terrain, it lasts 2 additional rounds.	P\$700
	Rocky Helmet	When your pokémon loses your Stamina to a Melee Move, the attacker loses 10% of their maximum Stamina.	P\$800
	Mirror Helmet	When your pokémon loses your Stamina to a Ranged Move, the attacker loses 10% of their maximum Stamina.	P\$800
	Sticky Barb	Your pokémon loses 15% of your maximum Stamina at the end of every round. They must spend their Standard action to intentionally drop this item.	P\$300
	Toxic Orb	At the end of the round, this item inflicts Venom on the holder.	P\$500
	Flame Orb	At the end of the round, this item inflicts Burn on the holder.	P\$500
	Thunder Orb	At the end of the round, this item inflicts Paralysis on the holder.	P\$500
	Glacial Orb	At the end of the round, this item inflicts Frostbite on the holder.	P\$500

Adventuring Items

These are everyday items, tools for some work or consumables to keep you running. While items here aren't magical, they will surely be useful on your adventure.

Name	Description	Price
Flashlight	It can provide light to help you see in dark places. A pokémon with the Light coverage can be used as an alternative.	P\$50
Fishing Rod	A tool to help you catch pokémon deep in water bodies.	P\$150
Rope	A classic rope for diverse uses in your adventure. Pokémon with the Whipping coverage can be used as an alternative. Its price varies with the rope's length and resistance.	P\$ 100 - 400
Tent	A shelter to keep you safe in the wild. The following price is for 1-person tent, to accommodate more people, multiply the price accordingly.	P\$350
Sleeping	A mobile alternative to a bed. It can accommodate only 1 person.	P\$200

Name	Description	Price
Bag		
Bandage	While Potions may be used for quick energy recovery, to treat long term damages, bandages are needed. After use, the bandaged pokémon/trainer has their next Recovering Action recovering twice as much Stamina. Then, after an Extended Time Block, they also have 1 injury treated. After that, the bandage is not usable anymore. Each one can treat only 1 pokémon once.	P\$25
Repel	An item that can make pokémon mistake you for a strong pokémon, making you less likely to be attacked by wild pokémon. It lasts for 1 Extended Time Block. Its price varies with the Repel efficiency. A pokémon with the Fearsome coverage can be used as an alternative.	P\$ 100 - 300
Honey	A sweet treat with a strong aroma that attracts wild pokémon. It lasts for 1 Extended Time Block. A pokémon with the Sweet coverage can be used as an alternative.	P\$ 100
Mon Snack	A nutritious and non-perishable food for your pokémon. The taste is not that good. Each box can feed a M-weight pokémon for a week. For other pokémon weights, it costs P\$20 more for each weight above M and P\$15 less for each weight below.	P\$70
Premium Mon Snack	A nutritious, non-perishable but expensive food for your pokémon. Your pokémon will love it! Each box can feed a M-weight pokémon for a week. For other pokémon weights, it costs P\$40 more for each weight above M and P\$30 less for each weight below.	P\$150
Water Bottle	A container for water. The price is for a 1 L Water Bottle, for a larger one, multiply the price accordingly.	P\$100
Cereal Bar/ Canned Food	A food that can last for a long time on your journey, but the taste is quite bland, but doesn't need the Cooking Set to be eaten. Each one can feed a human for 7 Complete Time Blocks.	P\$125
Cooking Material	A food that can be used with a Cooking Set for a better taste, however, it spoils in 5 Complete Time Blocks. Each one can feed a human for 4 Complete Time Blocks.	P\$50
First Aid Kit	A set of medical tools for emergencies. By spending a Short Time Block, recover 1 Stamina from and awaken a knocked out trainer or pokémon. It can be used to cure any Status Condition outside of combat. A pokémon with the Healing coverage can be used as an alternative.	P\$300
Cooking Set	A set of kitchen utensils to let you cook outside. They also permit you to prepare Dish items.	P\$150
Portable Grower	A small greenhouse so you can keep a berry tree growing on your journey.	P\$300
Mining Gear	A set of tools to venture in caves and collect minerals. A pokémon with the Piercing coverage can do the same thing.	P\$300
Ball Tool Box	A set of tools that are needed to craft pokéballs.	P\$400

Chapter 7

Your Pokémon

Pokémon Level

Every pokémon is different from one another, some are docile, some not so much, some like sweets, others do photosynthesis, but there is more to the table than their species' biology.

Your pokémon general strength is defined by their Level. Each pokémon hatches from their egg at Level 1 and can gain more levels through training - if they're with a trainer - or by growing old and experienced - if they're a wild pokémon.

As your pokémon gains levels they also gain Tiers, Stats, maximum Stamina and Move Allowance:

➤ Your pokémon **Tier** is a sub-stat defined exclusively based on your pokémon's Level, starting Level 1 at Tier I, being increased by 1 at every level multiple of 4, capping out at Tier VI at Level 20.

➤ The pokémon's **Stats** are firstly defined by their Archetype and then their Primary and Secondary Signature Stat - which can be seen in their respective pokédex entry's description.

◊ Your pokémon at level 1 gain +1 in both Signature Stats and them +1 more at every level multiple of 4, for the Primary, or every level multiple of 5, for the Secondary;

➤ The pokémon's **Stamina** is the most relevant sub-stat in battle, as when your pokémon's Stamina reaches 0 it becomes knocked out.

◊ Stamina is calculated as following:

$$15 + \text{HP} + (\text{HP}/2) \times \text{Level (rounded up)}$$

➤ Lastly, your **Move Allowance** (MA for short) is the sub-stat that defines how many moves - and how much strength - your pokémon can learn. It's simply calculated as **your pokémon's level + 2**.

Evolution

When your pokémon has certain requirements t, you can make it perform an evolution. It's a quick and painless process that usually leads to your pokémon growing even stronger.

After you evolve your pokémon, a lot of attributes change and they may become more fit to another combat style. As a result, they may need some time to relearn how to effectively use their body for battle. However, as they're bursting out in energy, the process becomes easier, as the following:

➤ Firstly, after evolution, choose what archetype you want your evolved pokémon to be;

➤ After that, check what moves and traits they don't have their coverage or prerequisites anymore or that it gained through another trait. Your pokémon loses all these moves and traits.

➤ If at least 1 non-additional trait was lost in this process, all other traits are lost as well. Mark down how many non-additional traits;

➤ Then, for the current Complete Time Block, your pokémon gain additional TC equal to their Tier;

➤ Additionally, until they enter in any battle, your pokémon gains the following:

◊ Your pokémon may learn any move by spending only 1 TC;

◊ Your pokémon may learn an amount of traits equal to the numbers of traits that they lost on evolution by spending only 1 TC;

Stats

Every pokémon has a defined set of attributes that differentiate them from the others. These are the Stats, which can not only help you visualize their physique and psychology, but also be one of the most important assets in battle.

These are Health Points (usually referred as HP), Attack, Defense, Special Attack, Special Defense and Speed. What they mean and their uses are as the follows:

➤ **HP** measures how bulky and how much damage it can soak, both in physique and in battle. A pokémon with low HP is usually small or skinny while pokémon with high HP are bigger or larger, but may not be the toughest. The HP in the stat is used to calculate your pokémon's Stamina.

➤ **Attack** measures how hard this pokémon punches, bites, slashes, stomps or anything that have to do with attacking using their own body. Pokémons with low attack are usually skinny or light, while pokémons with high attack are massive, muscular or heavy. In battle, high Attack means you are more likely to hit physical moves and they deal more damage with them.

➤ **Defense** measures how resistant to direct contact moves your pokémon is. Pokémons with low defense usually lack any reasonable meaning of protecting itself against opponents, while high defense pokémon usually have a hard skin or some form of direct protection, such as metal or rock parts. In battle, Defense makes you less likely to be hurt by physical moves while also reducing the damage taken by it.

➤ **Special Attack** measures how smart or wise your pokémon is. Pokémons with low special attack usually are not that intelligent and usually resort to brute force, while high special attack pokémons are more reasonable, use strategy and some are even capable of understanding human language. Also, it seems that the capability of evoking elemental power is directly influenced by their user's intellect. In battle, high Special Attack means you are more likely to hit special moves and they deal more damage with them.

➤ **Special Defense** measures how good you're in taking hits, but metaphorically. Pokémons with low Special Defense are easy to trick, to irritate or to sadden, while pokémon with high Special Defense are either optimistic and with high willpower or too aloof to mind anything at all. Researchers assume that elemental energy could be some form of communication, as it seems that pokémons with mental fortitude also resists special moves. In battle, Special Defense makes you less likely to be hurt by special moves while also reducing the damage taken by it.

➤ **Speed** measures how fast your pokémon can move and how good your reflexes are. Pokémons with low speed usually are sluggish or lazy, while pokémons with high speed are nimble, fast and with a great reaction time. In battle, high Speed primarily helps your pokémon to hit their moves, but also helps them to act first, avoid moves and to move more.

Archetypes

Archetypes are one of the more important decisions that you can make with your pokémon, with them dictating both your pokémon stats and what traits they can acquire. These also say what roles your pokémon can have, with Speedsters and Brawlers being more offensive, Supports and Guardians being more defensive and All-rounders being either or both.

In the following sub-chapter, you'll have a detailed description of every Archetype as well as how they gain stats. You can see the tables at page X for an easy guideline.

When building your pokémon you need to both choose an Archetype and a Sub-archetype, both based on your pokémon species. The sub-archetype says if your pokémon will be more Physical oriented, Special oriented or both.

Your pokémon can gain +2 in a stat if it fits two different prerequisites, such as the level 12 Guardian gaining +2 HP because it's multiple of both 4 and 6.

Speedster

Pokémon of the Speedster archetype are the classic glass cannons: having high damage and high precision, but have low defenses and Stamina.

However, thanks to their high speed, AoE moves can be quite ineffective against them. Their traits help them make the most of their high mobility and precision.

Speedsters start with the following stats:

General			
HP	Def	Sp Def	Spd
3	1	1	4

The following starting stats are based on the sub-archetype chosen:

Physical		Mixed		Special	
Atk	Sp Atk	Atk	Sp Atk	Atk	Sp Atk
4	2	3	3	2	4

Each of their stats is increased by 1 whenever a level is multiple of certain number (or increased by 2 if its multiple of both predefined numbers):

+1 at Levels divisible by...			
HP	Def	Sp Def	Spd
4	5	5	2

For the following stats, their growth is different for each sub-archetype:

Physical		Mixed		Special	
Atk	Sp Atk	Atk	Sp Atk	Atk	Sp Atk
4, 6	5	3	3	5	4, 6

Brawler

Pokémon of the Brawler archetype are built to both deal and take lots of damage, but it comes at the cost of precision and a weakness to status moves. Their traits and moves help them with their survivability and to deal even more damage – to be able to break through even the toughest Guardians.

Brawlers start with the following stats:

General			
HP	Def	Sp Def	Spd
4	2	2	1

The following starting stats are based on the sub-archetype chosen:

Physical		Mixed		Special	
Atk	Sp Atk	Atk	Sp Atk	Atk	Sp Atk
4	2	3	3	2	4

Each of their stats is increased by 1 whenever a level is multiple of certain number (or increased by 2 if its multiple of both predefined numbers):

+1 at Levels divisible by...			
HP	Def	Sp Def	Spd
3	4	4	5

For the following stats, their growth is different for each sub-archetype:

Physical		Mixed		Special	
Atk	Sp Atk	Atk	Sp Atk	Atk	Sp Atk
2	4	4, 6	4, 6	4	2

All-Rounder

Pokémon of the All-Rounder archetype are jack of all trades, master of none. They have average stats all around, as such, they can fill any roll that you want, even multiple at the same time. All-Rounders also have the quirk of being able to buy traits of any archetype, but with some limitations.

All-Rounders start with the following stats:

General			
HP	Def	Sp Def	Spd
7	4	4	12

The following starting stats are based on the sub-archetype chosen:

Physical		Mixed		Special	
Atk	Sp Atk	Atk	Sp Atk	Atk	Sp Atk
10	5	8	8	5	10

Each of their stats is increased by 1 whenever a level is multiple of certain number (or increased by 2 if its multiple of both predefined numbers):

+1 at Levels divisible by...			
HP	Def	Sp Def	Spd
4	5	5	2

For the following stats, their growth is different for each sub-archetype:

Physical		Mixed		Special	
Atk	Sp Atk	Atk	Sp Atk	Atk	Sp Atk
4, 6	5	3	3	5	4, 6

Support

Pokémon of the Support archetype have high precision, average to good defenses and low offenses. Thanks to their sticking power and high Speed, they're the best at using Status moves while also being resistant to them.

Their traits and moves help them enhance their utility, either protecting allies, improving their heals or inflicting enhanced Status conditions.

Supports start with the following stats:

General	
HP	Spd
1	4

The following starting stats are based on the sub-archetype chosen:

Physical			
Atk	Def	Sp Atk	Sp Def
3	4	1	2

Mixed			
Atk	Def	Sp Atk	Sp Def
2	3	2	3

Special			
Atk	Def	Sp Atk	Sp Def
1	2	3	4

Each of their stats is increased by 1 whenever a level is multiple of certain number (or increased by 2 if its multiple of both predefined numbers):

+1 at Levels divisible by...	
HP	Spd
4	4, 6

For the following stats, their growth is different for each sub-archetype:

Physical			
Atk	Def	Sp Atk	Sp Def
3	5, 6	6	3

Mixed			
Atk	Def	Sp Atk	Sp Def
4	3	4	3

Special			
Atk	Def	Sp Atk	Sp Def
6	3	3	5, 6

Guardian

Pokémon of the Guardian archetype have the sole focus on surviving the most time possible, but it comes at the cost of their precision, mobility and damage.

Guardian is the perfect pokémon to redirect attacks and to be the key piece in a strategy as they are reliable to still be alive when it's needed. Guardian traits help them regain some offensive stats as they stay in the field, make them even harder to defeat or give them access to new defensive moves.

All-Rounders start with the following stats:

General	
HP	Spd
4	1

The following starting stats are based on the sub-archetype chosen:

+1 at Levels divisible by...	
HP	Spd
4, 6	6

Each of their stats is increased by 1 whenever a level is multiple of certain number (or increased by 2 if its multiple of both predefined numbers):

Physical			
Atk	Def	Sp Atk	Sp Def
2	4	1	3

Mixed			
Atk	Def	Sp Atk	Sp Def
2	4	2	4

Special			
Atk	Def	Sp Atk	Sp Def
1	3	2	4

For the following stats, their growth is different for each sub-archetype:

Physical			
Atk	Def	Sp Atk	Sp Def
4	3, 6	6	5, 6

Mixed			
Atk	Def	Sp Atk	Sp Def
5	5, 6	5	5, 6

Special			
Atk	Def	Sp Atk	Sp Def
6	5, 6	4	3, 6

Moves

While stats themselves are useful, they can't do anything without their interaction with moves. These are the actual capabilities of what your pokémon can and can't do while also being the most important component of a pokémon battle.

Regardless of how you got your pokémon, they will already know at least 1 move, as it's in their nature, however, you can train your pokémon, as described in the page X, to make them learn new moves.

Each pokémon has 5 Move Slots by default, with each can fit 1 move. Your pokémon cannot have the same move learned twice. Your pokémon also has a sub-stat called Move Allowance (MA for short) which dictates how many and what quality of your moves can be. **The MA is equal to your pokémon Level + 2.** Your pokémon also has Move Points (MP for short) equal to your pokémon's MA, which can be spent to learn moves.

Your pokémon can learn moves of either their type or one of their coverages - which are described in their pokédex entry - for the pokémon - or the as Tags - for the moves. If the move is from one of your pokémon types or one of their Natural coverages, it can be learned as long as their tier is equal or above the move's tier. If the move is learned by a Standard coverage, it can only be learned if your pokémon's tier is above that move's tier.

After it's learned, the pokémon must spend MP equal to the move's tier. Your pokémon can forget moves at any time and, when doing so, it recovers the MP spent on them.

Additionally, when your pokémon is learning a move, you can choose to learn it as if it was one tier above, but reducing its Cooldown by 1. This is called Upgrading, which triggers the Upgrade keyword. You can also spend 1 TC to make your pokémon Upgrade a move that they already know.

When learning a move as a different tier, your pokémon follows the rules treating that move as the new tier, as such, a pokémon can learn Rain Dance - a tier III move - at Level 1 if it learned it as a tier I move. However, after the learning process, the move is now treated as its base tier for effects like Concentrate Energy (technique).

While moves have a set effect in combat, they can be used in more creative ways outside of battle. For instance, you could say that, after gathering flames with Will-O-Wisp for a while, your pokémon may throw them at the sky and then explode them as fireworks.

Traits

Traits are the additional characteristics that your pokémon have and may use them in battle. If you see moves as a theater play, traits would be the backstage crew, either having already set the stage, helping the actors to change clothes or always doing a little something in the middle of it.

Your pokémon can have an amount of traits equal to their tier. Traits must be always acquired in order, for instance, even if you catch a pokémon already tier III, you can't teach them first Melee Specialist, as this trait requires tier III and your first trait must be acquired as if your pokémon is tier I.

A pokémon can acquire any trait — they can be seen in Chapter 10 - Traits — that they fit its prerequisites, however, you must also take into account which list it is, as it means that the following traits have an inherent prerequisite. For example, while Gluttony doesn't seem to have any prerequisite, it's in the Brawler's list and, as such, has the Brawler archetype as its prerequisite.

Pokémon from the All-Rounder archetype can buy traits as if it were from any archetype, ignoring any archetype prerequisite. When acquiring traits this way, they cannot acquire traits that have another trait as one of its prerequisites.

There are also Unique and Exclusive traits: the former means that a pokémon cannot have two Unique traits with the same category, such as Rough Skin and Mirror Shields. The later means that the trait is exclusive to pokémon of that archetype, as such it cannot be acquired by All-Rounders neither through qualities that

When a trait makes you choose something, this is a permanent decision. If not stated otherwise, after choosing it when purchasing the trait, you cannot change it to another option. However, if your pokémon loses that trait and then reacquires it, you can choose another option, as if it was for the first time. Also, traits that raise a stat or sub-stat based on your pokémon tier have to be recalculated every time your pokémon reaches a new tier.

By default, pokémon that are immune to some type or move tag are also immune to any direct effect from a trait that has as a prerequisite having that type or move tag. If a trait has multiple prerequisites, you take in account only the one that you fitted to purchase it. If you fit multiple prerequisites at the same time, you can choose which is that trait affinity is when first purchasing it.

Typing

Lastly, there's typing. While you don't have much a chosen in this matter, every type has an additional immunity, to either a Keyword, Status Conditions or moves learned via a certain tag, as the following:

- **Bug:** Slow keyword;
- **Dark:** Drama tag;
- **Dragon:** Fearsome tag;
- **Electric:** Paralysis condition;
- **Fairy:** Infatuation condition;
- **Fighting:** Knockback keyword;
- **Fire:** Burn condition;
- **Flying:** Scatter keyword;
- **Ghost:** Locked keyword;
- **Grass:** Powder tag;
- **Ground:** Paralysis condition;
- **Ice:** Frostbite condition;
- **Normal:** Lazy tag;
- **Poison:** Poison condition;
- **Psychic:** Confusion condition;
- **Rock:** Sharpness keyword;
- **Steel:** Poison condition;
- **Water:** Snare keyword;

Additionally, Bug, Grass and Steel type gain the following traits as an additional trait:

Ambient Adaptation

Type Trait (Bug)

Choose one type that usually resists the Bug type moves. Now, your bug type moves deal neutral damage against that type instead.

Nature Revolution

Type Trait (Grass)

Choose two types that usually resist the Grass type moves. Now, your grass moves gain 100% Drain when used against a pokémon of at least one of the chosen types.

Design Flaw

Type Trait (Steel)

Choose three types that Steel type usually resists. Now, after being damaged once by one of the chosen types, you now resist them 2 steps less until the end of the battle.

Chapter 8

Combat

Initiative

The combat starts with the Initiative. Every pokémon rolls a d12 and adds their Speed stat and any bonus to this roll, with the resulting number being their initiative. If two pokémon have the same initiative, the fastest goes first.

Anytime a pokémon enters the battlefield for the first time, roll initiative for them. When any pokémon switches out, take note of what initiative they had, because it will be used when it enters the battlefield again.

After rolling the initiative, the Turn Phase starts, which is when the actual battle begins and the pokémon and trainers start to act. Each pokémon, and their respective trainer, can only take actions in their respective turn (with a few exceptions), which lasts about 6 seconds. With that in mind, the Turn Phase goes as follows:

- A new round starts;
- If this is at least the second round, at this moment the trainers can choose if they will switch out their pokémon or not. This is called the Free Switch;
- If anyone does choose to switch out their pokémon, they must say what pokémon they will switch in simultaneously;
- The pokémon and trainer with the highest initiative goes first and starts their turn;
- After they end their turn, the next highest initiative starts their turn;
- After everyone has had their turn at least once, the round ends;
- After the round ends, countdown the cooldown of all pokémon's moves;
- Then, note down all your moves and traits that entered in cooldown this round;
- If at any point only one side has a pokémon conscious, the battle is over, if not, a new round begins;
- If a new round began, this process repeats all over again;

Effects that would change the initiative of a pokémon are only applied on the next round start.

Switching Out

In the middle of the battle, there are moments when your pokémon is in a disadvantageous position and having some other pokémon take its place would be the better play. When that happens, you switch out your pokémon. Switching out has the following innate rules:

- The incoming pokémon always takes the switching pokémon's space, or the closest free space if not possible;
 - ◊ If the pokémon switched out in the middle of a move, the incoming pokémon becomes the target of that move in their place.
- If your pokémon wasn't switched out during your turn, the incoming pokémon can have their turn this round if the switching out pokémon didn't. In this case, follow these instructions:
 - ◊ If the incoming pokémon has a higher initiative than the pokémon of the current turn, when this turn ends, the incoming pokémon can take their turn;
 - ◊ If the incoming pokémon has a lower initiative than the pokémon of the current turn, the turn order goes as usual;
- While out of the battlefield, the pokémon doesn't trigger any "on end of your turn" effects, except said otherwise. Some common exceptions are Cooldowns, that countdown as usual, and Stat Changes and Permanent Status Conditions, which follow their own rulings;
- If your pokémon switches out through an effect that isn't the Free Switch, you can't switch it out through the next Free Switch;
- Your pokémon can't switch out through the Free Switch if it's in Action Debt;

➤ The pokémon switching in retain all the same number of actions that the pokémon that switched out had. They also maintain any Action Debt that the pokémon that switched out had;

Reminder: Except said otherwise, effects can't target pokémon outside of the battlefield.

Turns

Every turn is composed of both pokémon and their trainer and lasts 6 seconds in game. In each of them you have a Standard Action, a Movement action, a Quick Action and an indefinite number of Free Actions. Once you have nothing else you want to do, your turn is over. After that, both the trainer and the pokémon can still use their Interrupt actions. By default, you have only 1 of each action to spend per turn — with the exception of the Free action, which you can use as many as you can.

Additionally, before spending any of your actions (except Interrupt action) during your turn, you can choose to hold your turn and do it later in the round. When doing so, explicitly say after who you will go.

Both the trainer and the pokémon have to fit the rules for you to be able to hold your turn. However, while you're holding your turn (waiting for your new turn to come), neither of you can spend their Interrupt action.

Reminder: This system is not made with the intention of a Player character controlling more than one pokémon at a time. If this would happen, only 1 of their pokémon can have a turn during any round.

Actions

Actions can be done in any order you want and by anyone (pokémon or trainer), but you can't use one action in the middle of another, unless said otherwise.

Some effects may place you in some type of Action Debt: this means that you must immediately spend that action or, if not possible, the next time you would gain that action, it's immediately spent. If a pokémon is in any Action Debt, it can't switch out at the round start timing.

At the start of your turn you gain 1 Standard action, 1 Quick action, 1 Movement action, 1 Interrupt action and can spend as many Free actions as you can.

Reminder: Except said otherwise, effects that say "next X", like "next move" always mean "next X [used this round]"

Standard Action

This is the action that you will use to execute your most important effects and is what most of Moves and Techniques will require you to spend. Other actions can also be used in a Standard action, and these are the following:

Pace Change (Trainer). By making your pokémon becomes in Quick action Debt, at the end of the round, you can roll against their initiative and choose which one you'll keep.

Taunt (Trainer). The trainer makes a Deception Skill Check against the opponent trainer Intuition counter Skill Check. If you succeed, until the start of your next turn, the opponent trainer can't use any Technique that isn't from one category of your choice.

You can also use this action to target wild pokémon. In this case, the pokémon suffers the same effect as if they were hit by the Taunt (move).

Intel (Trainer). You can make a Pokémonology Skill Check DC 8 to gain some information. This can be a move used, a trait or a trainer effect. This DC may be higher or lower, at your GM discretion, based on what information you want.

Throw a Pokéball (Trainer). The trainer can try to start a Capture against a wild pokémon. This is explained in further details at the X chapter - page x.

Use an Item (Trainer). The trainer can use an Item on their pokémon. Some items also spend make your pokémon become in Action Debt.

Switch Out (Trainer). The trainer can make their pokémon switch out and another takes its place in the battlefield.

After that, you and your pokémon automatically hold your turn until the end of the round. As such, can only be used if neither the Trainer of the Pokémon has acted this turn.

You can still switch out your pokémon if it spent its action by Action Debt, however, the switch in pokémon also won't have the spent action.

Dodge/Block (Pokemon). Until the start of your pokémon's next turn, they gain +1 Margin of Success to avoid moves.

Sprint (Any). The character gains 1 additional Movement Action.

Interact (Any). The pokémon or trainer makes a major interaction with the ambient, mechanism or another living being. More complex action can also call for a Skill Check by the GM. Interactions that spend a Standard action could be pulling or shoving, using the Pokedex, pulling a lever, opening or closing a door, etc.

Movement Action

As it sounds, the Movement action is what you use to move your trainer or pokémon. Your trainer can move up to **4 + your Athletics modifier** in meters, while your pokémon can move **4 + Speed/3 (rounded down)** also in meters. This value is called Movement Speed, and can be either increased or reduced by other effects, however, it cannot be lowered to 0, stopping at 1.

Other actions can also spend your Movement action, usually they're simple enough to not spend a Standard action but can't be made while you're moving.

Some types of terrain, like sand and snow, or large objects, like a fence or a bush, may be considered an obstacle. They don't prevent a pokémon or trainer movement, but makes them spend twice the amount of Movement Speed to pass through them. By default, any form of movement can't go through and opponent pokémon or trainer.

Reminder: Effects that say "Reduce your Movement Speed" can't reduce your Movement Speed to 0. However, effects that say "Set your Movement Speed to 0" can.

Quick Action

This is the action that you will spend to do minor things, mostly consisting of Traits and some status category moves. There isn't any general action that costs a Quick action by default.

Free Action

Different from the others, Free actions can be spent as many times as you want. These are usually really small things, like dropping an item in the ground, pressing a button or speaking with someone.

It's worth noting that anything that costs a Free action to use and doesn't have a trigger condition can't be used more than once per round, unless stated otherwise. Additionally, those that do have a trigger condition can only trigger once per triggering.

Interrupt

These are usually actions that you can only do in reaction to something else that happened. By default, effects used as an Interrupt action may, as the name implies, interrupt the current character action.

Effects that cost Interrupt action can be used outside of your turn, at almost any point or at the triggering condition, the exception being in the middle of moves: except said otherwise, you can only use Interrupt actions after the pokémon doing the current move rolled to hit but before the target pokémon roll to avoid it.

You recover your Interrupt action when you enter the battlefield or at the start of your turn.

Attacking and Defending

The primary way to end a Battle is to attack your opponent until all their pokémon reach 0 Stamina.

For that, first, you need to choose what move your pokémon will use.

Targeting

Before any roll would be made, firstly you have to check the move targeting, which usually is Ranged, Melee or AoE (Area of Effect), and each of these have its own rulings, that are the following:

➤ **Melee.** This move needs you to be adjacent to your target. When making a Melee move, if you didn't spend your Movement action this turn or only moved in a straight line, you can spend your Quick action to gain +1 as a bonus to hit this move. This effect is called Rushing.

➤ **Ranged.** This move can hit far away targets that you have line of sight, described in the move itself how far the target can be. If the described range still isn't enough, you can choose to raise it by a value up to your tier. If you did so, the move gains a penalty to hit equal to the value chosen. If the move targets an ally, it has its cooldown raised by that value instead.

However, if you are trying to hit a target adjacent to you, your move gains a penalty equal to the target pokémon tier to hit.

➤ **AoE.** This move can hit more than one target in a Line, Cone, Blast or Burst. However, when the opponent rolls to avoid this move, if they choose to roll the Accuracy Check with Speed, they gain +1 Margin of Success and, when rolling to reduce the damage of the move, they gain half of their Speed (rounded down) as additional dice.

Reminder: There are moves with other categories of targeting, however, they don't have any specific ruling.

Accuracy Check

If that move requires an Accuracy check, you need first to see if the move hits the opponent. An accuracy check is made in the following way:

➤ First, see what category the move is: Special, Physical or Status;

➤ After that, you choose the stat you'll roll to hit. The options are based on the move's category, and goes as follows:

- ◊ Physical: Attack and Speed;
- ◊ Special: Special Attack and Speed;
- ◊ Status: Defense, Special Defense and Speed;

➤ The target then choose what stat they'll roll to avoid the move. Just like before, the choice is based on the attacker's move's category.

- ◊ Physical: Defense and Speed;
- ◊ Special: Special Defense and Speed;
- ◊ Status: Speed only;

➤ After that, both roll a number of d6s equal to the chosen stat and then count the number of successes;

➤ By default, any die resulted in 5 or higher is considered a success, but it can be increased or decreased via the Margin of Success. Each negative value on it adds to the minimum number to be a success, while a positive value subtracts it. The maximum Margin of Success is +3, while the minimum is -1;

- ◊ For example, with a move with a Margin of Success of +1, any die resulted in 4 or higher would be considered a success;

➤ If the chosen stat by the attacking pokémon is Speed, the move's gains +1 Margin of Success to hit;

➤ If the chosen stat by the defending pokémon is Defense or Special Defense, they gain +1 Margin of Success to avoid the move;

➤ After that, if that pokémon double resists the move's type, they gain a bonus of +2 to avoid the move or, if they are double weak to it, they gain a penalty of -2 instead;

➤ After that, add success equal to the move's bonuses and subtract them based on their penalties. Then, compare the number of successes. If the attacking side has equal or more success, it hits. If it doesn't, it misses;

➤ If your move hits, roll for damage (if the move is Physical or Special). Then, apply its effects on the target(s).

Dealing Damage

If the move hits, you can now roll the damage. You roll a number of dice based on the move's category — Special Attack for Special and Attack for Physical — and the category of the dice are defined by the move itself (referred as "dmg").

Then, the defending pokémon rolls a number of dice based on the move's category — Special Defense for Special and Defense for Physical — of a category of dice that is 1 category below the one that was rolled for damage.

If the damaging move's category is d1, reduce the damage by half your relevant defense (rounded down) instead. You cannot reduce the damage dealt to below 1/3 (rounded up) of their original value, called base damage.

Then multiply the damage by 1.5 if it's effective or divide it by 2 (rounded up) if it's resisted. The damage dealt in this system can't be double effective nor double resisted, instead, treat it as a normal weakness or normal resistance.

After that, roll a d20. If the result is the maximum number, your move is a critical hit. Multiply the damage by 1.5. Your moves can have a Critical Hit Margin bonus or penalty. This changes the dice you roll to deal a critical hit, which goes as the following:

- 0: d20 / +1: d10 / +2: d6 / +3: d2
- -1: can't crit / +4: guaranteed crit

The defending pokémon Stamina is then reduced by the final result. If their stamina is reduced to 0 or below, they're now knocked out. After that, the trainer of the knocked out pokémon must switch it immediately out as a Free action, if possible.

Reminder: This means that a move that scored a Critical Hit and was Effective deals 2.25x more damage, as both effects are multiplicative with each other.

Type Effectiveness

Whenever you're dealing damage to a pokémon, type effectiveness is a key aspect when calculating it. Every pokémon have its weakness and resistances based on its types, as such, Physical and Special moves targeting them receives the following effects:

- If the pokémon is neutral to the type of the move, no bonus or penalty is received in any way.
- If the pokémon resists the type of the move, reduce the damage by half after applying the defenses but before applying critical hit.
- If the pokémon is weak to the type of the move, multiply the damage by 1.5 after applying the defenses but before applying critical hit.
- If the pokémon is immune to the type of the move, you don't need to even roll the Accuracy Check: the move fails.
- If the pokémon double resists the type of the move (both types of the pokémon resist that type), in addition to the effects of the normal resistance, the pokémon receives a bonus of +2 to avoid the move.

➤ If the pokémon is double weak to the type of the move (both types of the pokémon is weak to that type), in addition to the effects of the normal weakness, the pokémon receives a penalty of -2 to avoid the move.

Some effects make you resist some steps more or less. This means that your pokémon will change how it interacts with its resistances and weaknesses. For that, follow the following list, going towards the "Immunity" for more and "Double weakness" for less.

- Immunity → Double resistance → Resistance → Neutral → Weakness → Double weakness

Damage Category

The damage category says what dice you should roll to define your base damage. Some effects can raise or decrease it, when it happens, do the following:

- First, take the relevant damage category;
- Then, going left to lower and right to raise or the opposite to reduce, follow the order:
 - d1 → d2 → d4 → d6 → d8 → d10 → d12 → "d14" (d12 + relevant Stat) → "d16" (d12 + relevant Stat x 2)
 - Both d14 and d16 don't exist, so you roll as its described in the parenthesis instead.
- You cannot go neither lower or higher than this.

When you use a move from the same type of your pokémon, raise its damage category by 1. This is called STAB, and you can only gain it once, except that it's said otherwise.

Some effects say "tier's damage category", that is dX (before STAB), where X is 2 + 2 x your pokémon's tier.

Stat Stage

One of the most common effects that moves have is changing a pokémon stat stages. These effects directly increase or reduce the targeted pokémon stats by a value that will be further explained in this sub-chapter.

While a pokémon is in the battlefield, their stat changes last indefinitely and can go up to 6 stages – either positive or negative – but when the pokémon switches out, it gains or loses 1 stage at the end of every round that they started outside of the battlefield until it reaches its base stat stage, which by 0 by default.

When your base stat stage is changed, you gain or lose stages in that stat equal to the value changed, for instance, if your Attack base stat stage was changed from 0 to -1, you lose 1 stage of Attack. The opposite applies if you lose that base stat stage change – in the same example, the pokémon would gain 1 stage in Attack if the base stat stage was changed back to 0.

Also, when your base stat stage is changed, your maximum stat stages are changed by the same amount, both positive and negative. For instance, if you have a Attack base stat stage of +2, your maximum Attack's negative stat stage will become -4 ($-6 + 2$) and your maximum positive stat stage will become +8 ($6 + 2$).

Stat stages changed by an alteration in the base stat stage doesn't trigger any effects that would trigger on a stat stage increase or reduction.

Primary Stats

The primary stats – being HP, Attack, Defense, Special Attack, Special Defense and Speed – all follow the same rule of how they work.

With the exception of HP, which can't be changed in the middle of the battle, these stats when raised or lowered by a stat stage change are altered by a number equal to a third of the pokémon's tier (rounded up).

For example, a level 12 pokémon – thus tier IV – that raises their Attack by 2 stages will gain +4 in the Attack stat, as each stage would raise it by 2 ($4/3 = 1.33$, rounded up to 2).

Additionally, Speed stat changes also affect their Movement Speed, being lowered or raised by 1 for every stage below/above 0, for negative and positive changes respectively.

Accuracy and Evasion

Besides the primary stats, there are still some stats that can be changed, there are two other attributes that can be changed and massively affect the battle: Accuracy and Evasion. The former modifies your pokémon chances of hitting the opponent while the later modifies their chances of being hit by a move.

Both of them work in the same way: for each stat stage you have in it, your pokémon receives a bonus/penalty of +1/-1 each for the relevant roll – the roll to hit, for Accuracy, and the roll to avoid moves, for the Evasion – on the Accuracy Check.

Status Conditions

In the battle, besides using damaging moves and changing the pokémon's stat stages, you can impact them in other ways. One of the most powerful ways to do that is by inflicting your opponent with Status Conditions. Pokémon can have up to 2 Status Conditions at any time, in which case, you can't receive a 3rd one by any means. These conditions are the following:

Volatile

These Status Conditions can be easily cured outside of battle, by just letting them shake it off.

While in combat, you can trigger their curing mechanic, even outside of the battlefield.

➤ **Flinch.** Your pokémon can't use any actions. This Status Condition only lasts until the end of the round.

➤ **Confusion.** Before you use your Standard action, roll a d6. If the result is 2 or less, your action fails and your pokémon hits themselves, losing twice their Attack or Special Attack (whichever is higher) reduced by Defense (if used Attack) or Special Defense (if used Special Attack) as Stamina.

◊ At the end of each round, roll a d4. If the result is 1 or lower, they're cured. When you fail in this roll, the next roll to be cured has the number needed to be cured raised by 1. The number resets to 1 after you're cured. Psychic types are immune to this condition.

➤ **Infatuation.** Your pokémon can't use damaging moves on the pokémon that inflicted this Status Condition or Status moves on your allies.

◊ At the end of each round, beside the one in which the condition is inflicted, roll a d2. In a 1, you're cured. The Infatuation also ends if the pokémon that caused it targets a damaging move against them. Fairy types are immune to this status.

➤ **Invisible.** Your pokémon can't be seen by anyone. They can still be targeted, by guessing what position they're in, but they gain a bonus of +3 to avoid being hit. This bonus can't be used against AoE moves.

◊ Unless said otherwise, this condition lasts for 3 rounds;

◊ This condition is also lost when your pokémon uses any move;

◊ For the purpose of other effects, becoming invisible/being invisible doesn't count as receiving/suffering from a Status Condition.

◊ Pokémon and trainers can notice an invisible pokémon by succeeding in a Perception Skill Check DC 10 + the pokémon's tier.

Permanent

These status conditions can just be cured by a pokémon center, using an item or being treated by a First Aid Kit. Unlike the Volatile Status Conditions, these don't usually have a curing mechanic, and if they do, they aren't triggered outside of the battlefield.

➤ **Sleep.** While afflicted, your pokémon Evasion base stat stage is lowered by 1. While Asleep, you can't use any action or move, unless said otherwise.

◊ At the end of each round, roll a d6. If the result is 2 or lower, you're cured. When you fail in this roll, the next roll to be cured has the maximum value to be cured raised by 1. The value resets to 2 after you're cured.

◊ You're also cured when you lose more than 25% of your maximum Stamina to a damaging move;

➤ **Burn.** While afflicted, your pokémon Attack base stat stage is lowered by 2. At the end of every round burned pokémon lose 5% of their maximum Stamina (rounded up). Fire types are immune to this condition.

➤ **Frostbite.** While afflicted, your pokémon Special Attack base stat stage is lowered by 2. At the end of every round, a pokémon with Frostbite loses 5% of their maximum Stamina (rounded up). Ice types are immune to this condition.

➤ **Paralysis.** While afflicted, your pokémon Speed base stat stage is lowered by 1. While paralyzed, your pokémon Movement Speed is lowered by an additional 1m and, before you spend your Standard action, roll a d6. If the result is 2 or lower, the action fails. Electric types are immune to this condition.

➤ **Poison.** At the end of each round your pokémon loses 10% of their maximum Stamina.

◊ **Venom.** They only lose 5% of their maximum Stamina at the end of every round. After that, double the percentage lost. Switching out resets the percentage back to 5%. For the purpose of effects, Venom is Poison, but Poison is not Venom.

Weather Effects

Some moves are able to change the whole climate of the battlefield to suit them better. These have some types that can take more advantage than others, called synergic types. The battlefield can have only 1 weather present.

When a weather is summoned while another is already on the battlefield, reduce the current weather duration from the new weather duration. If the result is negative, keep the old weather, with the new duration being the result as a positive number. If the result is zero, the battlefield is not in a Weather anymore. If the result was positive, keep the new weather, with the duration being the resulting number.

The weathers have the following effects:

➤ **Rain.** Water type moves have their damage category increased by 1, up to your tier's damage category. If the move's damage category would be increased past your tier's damage category, the move gains a bonus of +2 to hit instead. Additionally, non-Water, Electric or Flying type pokémon have their Speed base stat stage reduced by 1.

◊ Synergic types are Water, Flying and Electric.

➤ **Harsh Sunlight (Sun).** Fire type moves have their damage category increased by 1. If the move's damage category would be increased past your tier's damage category, the move gains "Sharpness 20%" instead. Additionally, non-Fire, Grass or Fairy type pokémon recover 50% less Stamina (rounded up) from all sources.

◊ Synergic types are Fire, Grass and Fairy.

➤ **Sandstorm (Sand).** Rock type pokémon have their Special Defense base stat stage raised by 2. At the end of each round, non-Rock, Ground or Steel type pokémon lose 10% of their maximum Stamina (rounded up).

◊ Synergic types are Rock, Ground and Steel.

➤ **Snow.** Ice type pokémon have their Defense base stat stage raised by 2. Additionally, non-Ice, Ghost or Dark type pokémon gain a penalty of -2 to hit Ranged and AoE moves.

◊ Synergic types are Ice, Ghost and Dark.

Terrain Effects

Some moves are able to change the whole ground of the battlefield to suit them better. These have some types that can take more advantage than others, called synergic types. The battlefield can have only 1 present terrain.

When a terrain is summoned while another is already on the battlefield, sum the current terrain duration and the new terrain duration. If the result is positive, keep the old weather, with the result as the new turn count. If the result is zero, the battlefield is not in Weather anymore. If the result was negative, keep the new weather, with the duration becoming the result as a positive number.

The terrains have the following effects:

➤ **Psychedelic.** Psychic type moves have their damage category increased by 1. If the move's damage category would be increased past your tier's damage category, the move gains "30% Confusion" instead. While in effect, pokémon can't spend their Quick or Interrupt action to use a move targeting a pokémon that isn't themselves.

◊ Synergic types are Psychic and Poison.

➤ **Grassy.** Grass type moves have their damage category increased by 1. If the move's damage category would be increased past your tier's damage category, the move gains "50% Drain" instead. While in effect, at the end of every round, every pokémon recovers 7.5% (rounded up) of their maximum Stamina.

◊ Synergic types are Grass and Bug.

➤ **Electrified.** Electric type moves have their damage category increased by 1. If the move's damage category would be increased past your tier's damage category, the move gains "Critical Hit Margin +1" instead. While in effect, pokémon can neither be inflicted Sleep or have their Movement Speed reduced or set to 0 by any means.

◊ Synergic types are Electric and Dragon.

➤ **Misty.** Fairy type moves have their damage category increased by 1. If the move's damage category would be increased past your tier's damage category, the move gains "Self: 30% Evasion +1" instead. The pokémon's moves % [Status Condition] keyword has its % reduced by half (rounded down).

◊ Synergic types are Fairy and Fighting.

Chapter 9

Narrating a Game

WIP

This whole chapter is still a work in progress and, for now, it's only here to give more tools for DMs narrating a TGPM game.

Skill Checks

As a basis for most TTRPG systems, Skill Checks are the glue that keep the game feeling fresh, introducing some variance to the party's adventure.

However, sometimes they can seem tricky to handle: when should I call for a Skill Check? How difficult should they be? And what results should I give based on their result? This chapter should help you to answer these questions.

Skill Checks: When

To start, for an action to require a Skill Check, some criteria must be met:

- Is the task or action actually possible?
 - ◊ This may be obvious, but there are some ideas that are just flat out impossible.
- For example, if your player says they want to jump out of a hole that has a height of 4m, that's physically impossible to any human, so the correct answer to this request (under a typical Pokémon setting) would be "no".
- Does both failing and succeeding this task change the game state?
 - ◊ This one is a bit tricky, and will be elaborated in the next section, but to sum it up, some actions don't make sense to have lasting consequences for failure, like climbing a small tree.
- The trainer may fall, but it wouldn't impede them from trying to climb it again, which in turn would make the test pointless, as they could just keep trying this Skill Check until they succeed.

Skill Checks: Difficulty

After deciding that the action actually calls for a Skill Check, you need to define the DC and, as such, how hard or easy a Skill Check needs to be. The following table gives you a brief idea of what DC you should use.

<5 Easy

For particularly easy tasks that are still worth a Skill Check

Ex: Walking silently inside a house

5-7 Medium

For tasks that are slightly hard for trainers not qualified to do that, but pretty easy for the ones who are.

Ex: Recall what Pikachu specifically likes to eat

8-10 Hard

For tasks that trainers are really unlikely to succeed unless they're trained in that Skill.

Ex: Convince someone into accepting a bad deal

11-13 Masterful

For tasks that basically only trainers specialized in that Skill can succeed.

Ex: Brave through Drakai's nightmares.

11-13 Impossible

For tasks whose trainers may only succeed by a miracle.

Ex: Survive an Aeroblast from Lugia

Skill Checks: Consequences

Then, after the player rolled and the result came, you need to give the Check its consequences. Just as important as if you should call for a Skill Check, the consequences can change quite drastically the objective of doing so.

For that, the context of the action is the most important part when defining its consequences. Taking back the possibility of a Skill Check to climb a tree, we'll have 3 different contexts to exemplify different approaches to consequences:

➤ The trainer is running away from a Tauros and sees a tree, small enough for them to climb, but tall enough to avoid the Tauros anger. They improvised a distraction a while back, but it won't hold it back for much longer.

◊ In this case, falling down without injuries and letting the player try the Skill Check again could work, as in this case, time is in the essence: every time they fail, the Tauros closes the distance and they may catch up to the trainer after 2 or 3 failures.

➤ The trainer is preparing themselves for a gym challenge. For this challenge, they need to prepare for the gym in a week. After 5 days, they get the information about the specialty of the gym leader — Fighting type — and they also heard about some strong Flying type that resides in a small-ish oak tree in the forest and can be seen making a nest for their offspring.

◊ For this case, falling down wouldn't hurt, but it would cause too much noise and scares the Flying type away, which, with their overall time limited, could make the player to think a different approach or preparation on their 2 days left before the gym.

➤ The trainers are taking their time exploring a route. One of your trainers wants to go out during the night and climb a tree to see if they can find a Hoothoot.

◊ Lastly, while possibly startling the (possible) Hoothoot could be a failure result, the player could choose to check other trees out or choose to come back another night. Either way, giving them a chance to fail would only drag things on without any real reason, and thus, in this case a Skill Check wouldn't be recommended.

➤ Otherwise, if the adventure is more linear and not that focused on exploring the world, it wouldn't neither be easy nor rewarding for each place having a specific material pool, as it could appear as if the world don't have the berry they want just because they skipped foraging at a specific place.

In these cases, it's recommended that you use the following material tables to define what the player finds in their search:

Mining

Mountain

Perception Skill Check, optional Strength Check for the amount.

DC	Item	DC	Amount
5	Tumblestone	4	1d6
8	Iron Chunk	7	1d4
12	Sky Tumblestone. DC 9 on the mountain peak.	10	1

Cave

Perception Skill Check, reduced by 3 without a light source. Then, optional Strength Check for the amount.

DC	Item	DC	Amount
5	Tumblestone	4	1
7	Iron Chunk	7	1d4
9	Black Tumblestone. DC 7 if deep within a cave.	9	1d6
13	Sky Tumblestone.		

Collecting Materials

As your players venture the wilds, they may be inclined into searching the flora for some berries or medicinal herbs. For that, the approaches should vary depending how the campaign work:

➤ If the campaign is open-ended with a focus on exploration, it would be more interesting for each type of resource to be specific to some place in the world, and so reward note taking and exploration itself;

Berries

Perception or Survival Skill Check, then roll on the table for the kind, and then for the amount. You can also have a fixed kind of berry per area.

DC	Item	Amount
5	Basic Berries (roll a d10).	1d6
7	Type Berries (roll a d20, reroll on 19, have the player choose on 20).	1d4
9	Stat Berries (roll a d10).	1d4-1, minimum 1
11	Rare Berries (Roll a d10).	1d2

Herbs

Perception or Survival Skill Check, then roll on the table for the kind, and then for the amount. You can also have a fixed kind of berry per area.

DC	Item	Amount
4	Hearty Grains	1d4+1
5	Bugwort	1d6
6	Medicinal Leek	1d4
7	Pep-Up Plant	1d4-1, minimum 1
9	Vivichoke	1d4-1, minimum 1
11	King's Leaf	1d2

Encounter Building

As your players navigate the world of Pokémon, they're fated to encounter some Pokémon. Sometimes, they're neutral or docile and don't want to directly interact with humans. Sometimes, they're not so cool about you entering their territory and will take you away by brute force.

For when situations get heated and your players will enter in a battle, you'll need to create a battle encounter for them. There are several ways and/or approaches to how many, how strong or how different the ruling for them will differ from the player's rulings. These will be detailed in this chapter.

Wild Pokémon

The most common case that your players will encounter on their adventure is a battle against wild Pokémon. These are untamed Pokémon that will mostly act on instinct and trainer may be able to catch.

However, by the own nature of not having a trainer battling by their side, they're in an inherent disadvantage, so, if you want a fair or challenging battle for your players, it's recommended for you to help them a little bit:

➤ For **Easy battles**, you can let the battle play out with the wild Pokémon without any help.

➤ For **Normal battles**, it would be recommended to give the wild Pokémon LTS and GTS, as if they had a trainer of an equal level.

◊ This still leaves the battle on the easier side.

➤ For **Fair battles**, in addition to the Normal battle changes, you give them additional LTS equal to the amount of Techniques naturally acquired by a trainer of an equal level.

◊ This will make the wild Pokémon have an edge in the amount of stats, but the trainers will still have more potential between their Techniques and Class Features.

➤ For **Hard battles**, in addition to the Fair battle changes, you give them additional LTS equal to the amount of Class Features a trainer of an equal level would have.

◊ Finally, this will make the wild Pokémon have a really big stat advantage, which in turn will make the players use their trainer and Pokémon to its fullest potential to win.

After deciding the difficulty, we can start to choose how many Pokémon the battle will have and what level they'll be.

To begin, give the encounter an equal amount of Pokémon as there are players participating in the battle. All these Pokémon should have a level equal to the average level between the participating players (rounded up). The level achieved by this average will be called the Default Level for this chapter.

With just these parameters, you should have a balanced battle for your players. However, if you want the battle to be a little different, here are some changes you can make to the encounter:

➤ If you want to add a pokémon, lower 2 total levels between the opponent pokémon. Then, you may add a pokémon of 1 level lower than the Default Level. You may repeat this as many times as you want.

◊ It would be recommended to not have more than the double of opponent pokémon as there are players.

➤ If you want a pokémon to be a higher level than the Default Level, you may reduce 1 level of 1 opponent pokémon to raise 1 level of another opponent pokémon. You can't have a pokémon more than 2 levels above the Default Level

◊ If a pokémon has its tier increased by having their level raised, it would be recommended that you don't make them learn any damaging move from that tier, as it would deal much more damage than the players may be able to deal with.

With these rulings, you should be able to balance out your encounters in a variety of ways to keep the sessions from feeling stale.

However, if you still want some more flavour, feel free to homebrew your own changes! For instance, it could make sense for your own world setting to have even harsher Weather and/or Terrains, so you are able to stack them. Maybe there are flames in the middle of the battlefield that will damage anyone who comes closer. Feel free to try and experiment making your own homebrew effects to spice things up.

Opponent Trainer

While your players are mostly likely to encounter and battle wild pokémon, they may face pokémon trainers as well, like the customary rival fight or when you're taking down an evil organization. Either way, these are pretty simple to make.

For the most straightforward way to build an encounter against another trainer, just have as many trainers as it will have participating trainers with an equal level to the player's trainers.

In this approach, the leverage you can use to make it harder or easier would be leveling up the

trainer (but not the pokémon) to make it harder or maybe not fully train the pokémon, like not spend all their MA, not acquire the maximum amount or not have all their Training Stats trained yet to make the encounter easier.

However, not every time it makes narrative sense to have as many opponent trainers as the battle has participating players. In this case, use the following guidelines:

Same Pokémon Number

If you want that both sides have the same amount of pokémon on the battlefield, and thus the same amount of turns, use the following instructions:

Less Trainers

If the opponent side will have less trainers than the player's side, like for a Gym challenge, start by taking note of how many trainers there are of disadvantage in the opponent side. This will be called the Disadvantage modifier pool.

Then, share the Disadvantage modifier pool as evenly as possible between each opponent trainer. For example, if there are 5 players and 3 opponents, you would have 2 Disadvantage modifiers, which would be given 1 off to 2 opponent trainers.

While an opponent trainer has a Disadvantage modifier, they receive the following bonuses:

➤ Their maximum Morale is increased by 100% per Disadvantage modifier they have;

➤ They recover 1 additional Morale at the start of every round for each Disadvantage modifier they have;

➤ They may trigger Once per round effects more than once, as long as they're triggered once per round per pokémon owned by that trainer that is in the battlefield.

➤ They can order 1 additional pokémon of their own on the battlefield for every Disadvantage modifier they have.

Optionally, if you want the opponent trainers to go back and forth between who has more of their pokémon on the battlefield, you can make the following changes to these rulings:

➤ Equalize the amount of Disadvantage modifiers the opponent trainers have, taking as default the highest amount between them.

➤ Their maximum Morale is increased by 100% per Disadvantage modifier they have, however, you ignore their first modifier;

◊ This means a trainer with 2 modifiers would have their Morale increased by only 100%;

➤ They recover 1 additional Morale at the start of every round per additional pokémon they have on the battlefield.

More Trainers

If the opponent side has more trainers than the player's side, like getting swarmed by an evil organization's lackeys, it works similarly to when you add more wild pokémon to an encounter.

If you want to still have the same amount of pokémon on both sides, it overall doesn't change anything balance-wise, as long as everyone is on the same level.

For thematic reasons, you may have the currently battling trainers call on backups and, when they're defeated, the backup comes, or maybe it's a test of endurance and versatility from a Gym Leader, seeing how you hold up against different trainers in the same battle.

Uneven Number of Pokémon

For when you want the players to either have a turn advantage or disadvantage, the right call would be that every trainer is commanding 1 pokémon each, which can naturally lead to the unevenness between the opponent and the player's side.

In this scenario, another leverage you can use to balance the fights is increasing or decreasing the total amount of pokémon each side has. For a fairer fight, have each side having the same total amount, even if the opponent side has more or less pokémon than the player's side.

For that, use the following instructions:

Less Trainers and Pokémon

This one should be expected to be tougher balance-wise: there is a wide array of variables that can make a side stronger or weaker, which can easily lead to some pretty unfun battles if not chosen correctly.

In this section, we'll have 3 different suggestions to how you can go with it:

➤ **Experienced Trainer(s):** For every trainer disadvantage the opponent side has, increase the opponent trainer(s)'s level by 2. Do not level up the pokémon.

◊ This suggestion works best when the player's are battling against someone who is holding back, like a Gym Leader;

➤ **Tougher Pokémon:** For every trainer disadvantage the opponent side has, increase the level and HP of the opponent's pokémon by 1, however, the opponent pokémon cannot learn damaging moves from a tier above the average tier of the pokémon in the player's side.

◊ This suggestion works for characters that are considered battle geniuses, that have an extremely rigid training routine or that is using some kind of modification to increase the battle prowess of their pokémon.

➤ **Endurance Test:** For every trainer disadvantage the opponent side has, the opponent side has 2 additional pokémon.

◊ This suggestion works best for joke trainers or cheating ones, as it's quite an unfair tactic to use more pokémon than usually allowed. However, this can make the battle drag out a lot, so it would be best advised that the opponent side doesn't have as many defensive pokémon.

More Trainers and Pokémon

While this circumstance is usually less common, it can up the stakes of the battle right from the start, as the players can clearly see their number disadvantage, and thus, they'll need to play their best if they want to win.

For that, for every additional trainer you add to this encounter, choose between:

➤ Reducing the trainer's and pokémon's level of every opponent by 1;

➤ Reduce the amount of LTS that every opponent trainer has by 2. This can make opponent trainers have negative LTS, which they would apply to their pokémon obligatorily.

Rare Traits

While the system has an emphasis on every pokémon being equally viable, sometimes it's better for the pokémon to have their own unique aspects, even if they became a little stronger. This is the reason Rare Traits exist.

When your player takes their own journey into the wild to find a specific and/or rare pokémon they want, they should be rewarded by giving that pokémon a rare trait. The same thing can be said about catching boss template pokémon.

All choices on these traits should be done by the GM, not the player.

The Chosen One

Your pokémon can acquire 1 trait as if they're an All-rounder. If they're from the All-rounder archetype, they can acquire 1 Exclusive trait that they fit the prerequisites.

Different DNA

One of your pokémon signature stats is changed to another. They cannot have two signature stat of the same stat.

Fast Learner

One of your pokémon Standard coverage becomes a Natural coverage.

Vast Knowledge

Your pokémon gains 1 additional MA.

Petit Creature

Your pokémon size is below the average of their species. Additionally, raise their Speed by 1.

Big Guy

Your pokémon size is above the average of your species. Additionally, raise their HP by 1.

Skillful

Your pokémon gains a bonus of +2 in Skill Checks of a Trainer Skill, defined by the GM. Additionally, raise the relevant stat for that Trainer Skill by 1.

Sharp Vision

The trainer chooses 1 of their pokémon's Ranged targeting moves. It gains +1m in range. If the chosen move is forgotten, they can choose another Ranged move to gain this benefit instead.

Long Reach

The trainer chooses 1 of their pokémon's Melee targeting moves. It can target opponents up to 2m away. If the chosen move is forgotten, they can choose another Melee move to gain this benefit instead.

Shiny!

Once per battle, when your pokémon enters the battlefield, they can spend their Interrupt action to inflict Flinch to all opponent trainers. Wild pokémon are Flinched by this effect as well. Experienced trainers are immune to this effect.

Raid Boss

Prerequisite: Previously be a Boss Template pokémon

Once per battle, your pokémon can spend their Standard action to inflict Flinch on every opponent pokémon up to 4m away from them.

Boss Template

When you want to make a combat where your players will need to defeat a single and stronger threat, the normal pokémon sheet won't cut it. For those situations, the best way to make a fight like that is using the Boss Template.

For that, firstly, choose a pokémon, their archetype and their sub archetype, and make it the same level of the player with the highest level. After that, calculate their stats as if it were from the All-Rounder archetype, even if they aren't, as this will be the best middleground between toughness and damage output. Then multiply their maximum Stamina by the number of players. Lastly, choose their Boss Trait and a number of Boss Actions.

Additionally, every Boss Template pokémon gains the following passive effects:

➤ A single move can't damage or make it lose Stamina more than their maximum Stamina value before multiplication;

➤ Any Stamina % gain or loss is reduced by half (rounded down);

➤ They have a number of Boss Reactions equals to the number of players - 1. These reactions are recovered at the start of every round.

➤ At the end of every round, they gain 1 stage in any stat they have stages below its base;

➤ Consider all their Coverage as Natural Coverage;

➤ They raise their HP stat by a value equal to their tier;

➤ They roll additional dice to both hit and avoid moves equal to their tier;

➤ They have 2 additional move slot and twice its tier as additional MA;

Boss Traits

Only Boss Template pokémon can have a Boss Trait. Every Boss Template pokémon has 1 Boss Trait. You may give them more, but it would make them significantly harder.

The Boss trait additionally gives you a Bonus stat. It raises that stat by a value equal to the boss' tier.

Evasionist

Prerequisite: Speedster Archetype

For damage reduction purposes, every move against the Boss is considered AoE. Additionally, they're immune to the negative effects of the opponents' Area Specialist trait.

Boss Stat: Speed.

Precise Attacker

Prerequisite: Speedster Archetype

The Boss' default Margin of Success to hit is +1.

Boss Stat: Attack or Special Attack (their choice).

Immense Bulk

Prerequisite: Brawler Archetype

At the end of every round, the Boss recovers 5% of their maximum Stamina for every damaging move that hits them. This recovery isn't reduced by the Boss Template passive effect.

Boss Stat: HP.

Powerful Attacker

Prerequisite: Brawler Archetype

The Boss' damaging move's gain "When this move misses, the user still rolls for damage. Deal half as much damage (rounded up) to this move's target.

When doing so, the user doesn't roll for Critical Hit, don't trigger any of this move's effects (other than the Damage Category keyword) and the target's roll to reduce damage as usual."

Boss Stat: Attack or Special Attack (their choice).

Generalist

Prerequisite: All-Rounder Archetype

The Boss can roll to both hit and avoid moves using any stat they want. Consider any stat used via this boss trait as having the default Margin of Success.

Bonus Stat: any stat of their choice.

Strange Attacker

Prerequisite: All-Rounder Archetype

The Boss' damaging move's gain "This move's targets have to use their third highest stat instead of the relevant defenses. Any unusual stat used via this effect has the default Margin of Success."

Bonus Stat: any stat of their choice.

Overclocking

Prerequisite: Support Archetype

Whenever one of the Boss' moves would raise their own stat stages, double the amount of stages changed. Additionally, when rolling with the Heal or Shield keyword, you gain X amount of additional dice per player, where X is equal to half their tier (rounded up).

Additionally, the Boss can ignore the "Other" text from their move's targeting.

Boss Stat: Defense or Special Defense (their choice).

Hexing Attacker

Prerequisite: Support Archetype

The Boss' moves with X% [Status Condition] or X% [Stat reduction] keyword have its % chance doubled. If the chance was already 100%, gain +1 to hit instead.

Additionally, at the end of every round, if an opponent pokémon is inflicted a Status Condition, they lose 10% of their maximum Stamina.

Boss Stat: Speed.

Self Defense

Prerequisite: Guardian Archetype

The Boss' moves with the Guardian tag have their effects changed to the following:

➤ **Rage Powder:** Unavoidable, Accuracy -1, Evasion -1.

➤ **Ally Switch:** [Range: Ranged 7m] Unavoidable, Priority 1. Change the user's position with the target, then update the target's accordingly.

➤ **Follow Me:** Unavoidable, Priority 1. Buf 1: When this pokémon loses Stamina to a damaging move, the attacker loses the same amount; Debuff 1: The target can't use Status moves.

Boss Stat: HP.

Parrying Attacker

Prerequisite: Guardian Archetype

Choose a stat between Defense and Special Defense. Whenever the Boss avoids a damaging move, the target loses Stamina equal to the value of the chosen stat.

The Boss can roll to avoid a Status category move with the chosen stat. When doing so, they roll with the default Margin of Success.

Boss Stat: Defense or Special Defense (their choice).

Boss Reactions

Only Boss Actions can spend Boss Reactions, which work similarly to every other action, with the exception that they're recovered at the start of every round, not at the start of your turn. A Boss Template pokémon can have between 2 to 5 different Boss Reactions, based on how hard you want the fight to be.

By default, Boss Actions can be used only once per round.

Avoidance

Can only be used when an opponent pokémon targets the Boss. The Boss gains a bonus of +3 to avoid the triggering move.

Push Through It

Can be used at any time, however, it costs 2 Boss Reactions instead. The Boss is cured from 1 Status Condition.

Grappler

Can only be used when an opponent pokémon moves out of the Boss' Melee range. The triggering pokémon has their Movement Speed set to 0 until the end of their next turn.

Focus Target

Can only be used at the end of their turn. Place an Aim mark on 1 opponent pokémon until the end of the next round. The Boss gains a bonus equal to 1 + their tier to hit a pokémon with the Aim mark and the same amount as additional damage dice.

If the pokémon with the Aim mark switches out, the boss raises any of their stat stages by 1.

Summon Distraction

Can only be used at the start of the round and if the Boss still has all of their Boss Reactions.

A number of pokémon equal to the number of players enter the battle. The pokémon summoned has their maximum Stamina reduced by half (rounded up). Then, remove all opponent's temporary effects and Status Conditions from the Boss.

Until all of the summoned pokémon are knocked out, the Boss can't be targeted by any effect, can't spend any action, except Boss Reactions, and recovers 2.5% of their maximum Stamina at the end of every round. This recovery isn't reduced by the Boss Template passive effect.

This reaction can be used up to 3 times per battle, based on the difficulty.

Elemental Invasion

Can only be used at the start of a round. Create an Invasion in a Blast 1m area centered in an empty space up to 5m away from the Boss. When doing so, choose one of the Boss' types to be the Invasion's type. At the end of every round, the Invasion's area expands 1m, up to 5m area. There may be up to 3 Corruption at any time in the battlefield.

When a non-Boss pokémon enters or ends their turn inside an Invasion's area, they lose 20% of their maximum Stamina. The Invasion is removed when an effective move of a tier equal to the Boss' tier is used against it.

Honey Gather

Prerequisite: Bug type or coverage

Can only be used when a pokémon recovers their Stamina through a move or consumable item. The Boss recovers half as much Stamina that the triggering pokémon recovered (rounded up).

Smoky Escape

Prerequisite: Dark type or coverage

Can only be used when a pokémon uses a move targeting a pokémon that isn't the Boss. The Boss is inflicted with Invisible that lasts until the end of their next turn. Additionally, the Boss can move up to 3m in any direction.

Dragon's Roar

Prerequisite: Dragon type or coverage

Can only be used when a pokémon moves away from the Boss. Trigger Eject on the triggering pokémon.

Electric Static

Prerequisite: Electric type or coverage

Can only be used when a pokémon up to 5m away from the Boss spends their Standard action. The triggering pokémon immediately rolls a d6. On a result 3 or less, their action fails.

Fairy Dust

Prerequisite: Fairy type or coverage

Can only be used when the Boss is hit by a Melee move. Until the end of the next round, the attacker loses their Signature Trait effects and can't use their Signature Move.

Battle Spirit

Prerequisite: Fighting type or coverage

Can only be used when the Boss is hit by a Physical move. Until the end of the Boss' next turn, they roll their tier as additional damage dice on their damage rolls.

Burning Hands

Prerequisite: Fire type or coverage

Can only be used right before an opponent pokémon uses a Physical move. Inflict Burn on the triggering pokémon. If they're already in Burn, they lose 10% of their maximum Stamina instead.

Ephemeral Typhoon

Prerequisite: Flying type or coverage

Can only be used when an opponent pokémon moves away from the Boss. Trigger "Knockback 5 (Any)" on every pokémon up to 5m away from the triggering pokémon.

Transparency

Prerequisite: Ghost type or coverage

Can only be used at the end of the Boss' turn. Until the start of the Boss' next turn, moves targeting them receive a penalty of -X to hit, where X is the number of players. After the resolution of a move targeting the Boss, reduce the penalty by 1. When the penalty becomes 0, this Boss' Reaction effect ends.

Conjure Roots

Prerequisite: Grass type or coverage

Can only be used when an opponent pokémon spends their Standard Action. The triggering pokémon enters in Movement action Debt.

Grounded

Prerequisite: Ground type or coverage

Can only be used right before an opponent pokémon up to 7m away from the Boss would move. The triggering pokémon Movement Speed is set to 0.

Quick Frost

Prerequisite: Ice type or coverage

Can only be used right before an opponent pokémon uses a Special move. Inflict Frostbite on the triggering pokémon. If they're already in Frostbite, they lose 10% of their maximum Stamina instead.

Standardize

Prerequisite: Normal type or coverage

Can only be used at the start of the round. Every pokémon's Stances are removed. The trainers of the affected pokémon restore 1 Morale.

Flying Gunk

Prerequisite: Poison type or coverage

Can only be used after the resolution of a damaging Move targeting the Boss. Inflict Poison on a random opponent pokémon. If they're already in Poison, they lose 10% of their maximum Stamina instead.

Tricky Move

Prerequisite: Psychic type or Coverage

Can only be used when the Boss is targeted by a Ranged move. They can move up to twice their tier in any direction and avoid the triggering move. They can pass through obstacles with this movement.

Sturdy Rock

Prerequisite: Rock type or Coverage

Can only be used when the Boss receives a critical or effective damaging move. Roll to reduce the damage a second time. You can reduce the damage received to 20% of the base damage instead.

Mirrored Steel

Prerequisite: Steel type or Coverage

Can only be used when the Boss is hit by a damaging Ranged move. After the move's resolution, the attacker receives half as much damage (rounded up, after defenses but before effectiveness and critical hit).

Cast Mist

Prerequisite: Water type or Coverage

Can only be used at the start of the round. Until the end of the round, the Boss' stat stages can't be reduced.

Terrify

Prerequisite: Fearsome Coverage

Can only be used when the Boss is targeted by a Status move. The attacking pokémon makes a Focus skill check with DC 4 + the Boss' tier. In a failure, the move fails and they're Flinched.

Raise Buckler

Prerequisite: Protection coverage

Can only be used when the Boss is hit by a damaging move. Their next damage reduction roll gains additional dice equal to half their level (rounded up).

Sending Kisses

Prerequisite: Cute coverage

Can only be used when a pokémon moves towards the Boss. Place a Kissy mark on the triggering pokémon. At the start of the next round, inflict Infatuation to any pokémon with a Kissy mark, then remove it.

Round & Round

Prerequisite: Spinning coverage

Can only be used when an opponent pokémon moves away from the Boss. Inflict Confusion on the triggering pokémon.

Sorry Face

Prerequisite: Drama coverage

Can only be used right after the Boss avoids an opponent's move. The attacker has its Special Attack or Special Defense stat stage (the Boss choice) reduced by 1.

Lunar Howl

Prerequisite: Canine coverage

Can only be used while the Boss' Stamina is below or equal 50%. They gain 10% of their maximum Stamina as temporary Stamina, like the Shield keyword, until the start of their next turn. This temporary Stamina isn't reduced by the Boss Template passive effect.

Additional and Alternative Rules

This system is made with diverse bold ideas that you or your players may not find the best for your game. For that, there's this chapter of some new rules to make your game easier, harder, use a different set of dice or change a rule that may not fit your view of what makes a Pokémon game.

Custom Stats

If you value the diverse ways that Pokémon usually distribute stats, you may not find that much attractive the current stat system. For that, the Custom Stats could either be an alternative or a baseline for a homebrew system.

Firstly, at level 1, you can distribute 22 points between your pokémon stats, gaining +2 to distribute every level and +1 every level multiple of 2. Apply the Signature Stats as usual.

At tier I, your pokémon can't have any base stat higher than 8, raised to 16 at tier II and 24 at tier IV.

Additionally, based on your pokémon's archetype and sub-archetype, you must maintain the following proportion rule:

- **Physical:** Their Special Attack can't be higher than their Attack and their Special Defense can't be higher than their Defense.

- **Special:** Their Attack can't be higher than their Special Attack and their Defense can't be higher than their Special Defense.

- **Mixed:** At tier I, II and III, both your Attack and Special Attack, and your Defense and Special Defense can't have a difference higher than 3 points. At tier IV or higher, this difference can't be higher than 6 points instead.

- **Speedster:** Their HP can't be higher than their Speed and their Defenses can't be higher than their respective Attacks.

- **Brawler:** Their Speed can't be higher than their HP and their Defenses can't be higher than their respective Attacks.

- **All-Rounder:** At tier I, your highest stat can't be more than 4 numbers higher than your lowest stat. This limit is increased by 1 with every tier, up to 9 at tier VI.

- **Support:** Their HP can't be higher than their Speed and their Attacks can't be higher than their respective Defenses.

- **Guardian:** Their Speed can't be higher than their HP and their Attacks can't be higher than their respective Defenses.

Chapter 10

Traits

By default, traits that affect “your next move” only lasts until the end of the round. Except said otherwise, traits that give moves additional effects are only valid on its relevant use.

For example, the Stakeout trait only gives “Damage Category -1” to the move used as a Interrupt action only while it’s used via the Stakeout trait.

Some traits have cooldown, working exactly how moves and techniques’ cooldown, however, only the effect with an action cost can enter in cooldown.

General

Eternal Child

Prerequisite: Be non-fully evolved

If your pokémon has 1 Signature stat, choose another one to be their secondary. If they don’t have any, choose 1 from their evolved form to be their main and any other to be their secondary. However, they can’t evolve anymore. This trait can’t be acquired retroactively, nor be retrained.

Underdog Potential

Prerequisite: Eternal Child trait

Your pokémon can now use the Underdog section of their Signature move or trait. Additionally, if they have a Signature move, it gains the following buffs:

- Its damage category is raised by 1;
- Its cooldown is reduced by 1;
- If the move is ranged, raise its range by 2m;
- AoE moves gains area: Blast, Burst and Cone moves gains +1m while Lines have its length increased by 2m and its width by 1m;
- Its considered as 1 tier above;

Lived Life

Prerequisite: Underdog Potential trait, Tier III

Your pokémon gains 3 additional traits of your choice. Additionally, if you’re the first stage of an evolution line and you have a Signature move, raise its damage category by 1 and its now considered as 1 tier above;

Skillful Trainee

Choose 2 Trainer Skills, one to be your pokémon’s Primary skill and another to be their Secondary skill.

When they’re rolling a skill test with their Primary skill, they gain a bonus equal to their tier. When they’re rolling with their Secondary skill, they gain a bonus equal to half your tier (rounded up).

Additionally, raise the skills’ associated stats by 1. For instance, if you chose Endurance and Perception, they would raise both their HP and Speed by 1. For Athletics and Strength, you can choose between Attack and Defense.

Qualified Worker

Prerequisite: Skillful Trainee trait

Choose 3 Trainer Skills that weren’t chosen as your pokémon’s Primary skill in Skillful Trainee. When they’re rolling a skill test with one of them, they gain a bonus of +2. If you choose their Secondary skill, it instead is now treated as if it were your Primary skill instead. Additionally, choose any of their stats and raise it by 1.

Alternatively, at your GM discretion, you can forgo choosing 1 skill to choose one non-consumable Adventuring Item. Your pokémon is now treated as that item for your use. For example, you may choose the Ball Tool Box. While they’re helping you, you may craft pokéballs as if you had the chosen item.

Stakeout

When an adjacent opponent pokémon to your pokémon would move outside of their Melee range voluntarily, your pokémon can spend their Interrupt action to use a damaging move against the triggering pokémon. That move gains “Damage Category -1”.

Charged Attack

Prerequisite: Tier II

Once per round, whenever your pokémon spends their Quick action to make their next move receive an additional effect, they may spend a Free action to gain another Quick action. If they did so, at the end of your turn, they become in Quick action debt.

Melee Specialist

Prerequisite: Tier III | Unique trait - Specialty

Your pokémon's Melee moves gain the following effects:

- They gain half of their tier (rounded up) as additional damage dice;
- Moves without either Moving or Dashing keyword gain "Moving";
- Moves with Moving/Dashing keyword are changed to "Moving 1"/"Dashing 1";

Ranged Specialist

Prerequisite: Tier III | Unique trait - Specialty

Your pokémon's Ranged moves gain the following effects:

- They gain a bonus of +1 to hit;
- They gain additional range equal to the move's tier (after Upgrading), called Effective Range, in meters. Targeting a pokémon beyond its default range but still in the Effective Range receives a penalty of -2 to hit;
- You don't receive a penalty to target a pokémon adjacent to you;

Area Specialist

Prerequisite: Tier III | Unique trait - Specialty

Your pokémon's AoE moves gain the following effects:

- When they use an AoE move, choose 1:
 - ◊ Targets don't add half their Speed value to the damage reduction roll;
 - ◊ Targets don't receive +1 Margin of Success to avoid it using Speed;
- Their area is raised by 1m (width for Line, Radius for Blast);
- They can spend their Quick action to change the targeting from only Enemies or Allies instead of Everyone;

Oblivious

Prerequisite: Lazy coverage

Your pokémon becomes immune to Infatuation. Additionally, once per round, they can spend their Interrupt action to gain a bonus of +2 to avoid the next Cute, Fearsome or Drama tagged move targeting them.

Aftermath

Prerequisite: Cursing or Finale coverage

When your pokémon is knocked out, deal 1/4 (rounded up) of their maximum Stamina as damage to any opponent pokémon up to twice their tier in meters away.

Damage dealt by this trait is reduced as if it were a dX single target move, but using the target's Speed stat instead of any Defense. The X in dX is equal to the tier, rounded down to the nearest damage category.

Elemental Whip

Prerequisite: Whipping coverage

Your pokémon can spend their Quick action to give their next Whipping tagged move a bonus of +1 to hit.

Additionally, all your pokémon's Whipping tagged moves gain "Adaptable".

Pack Tactics

Prerequisite: Canine Coverage

While there is another allied pokémon adjacent to a pokémon that your pokémon is using a Melee move against, that move gains a bonus of +1 to hit.

Thunderous

Prerequisite: Sound coverage

Your pokémon can spend their Quick action to give their next Sound tagged move "Choose 1: Self: Knockback 3 (Any) or Knockback 4". This trait has cooldown 1.

Additionally, all your pokémon's Sound tagged moves gain "Adaptable".

Sweet Voice

Prerequisite: Voice coverage

Your pokémon's Voice tagged moves doesn't trigger the cure condition of Infatuation and Sleep.

Additionally, they can spend their Quick action to give their next Voice tagged move 30% Infatuation or 20% Asleep.

Download

Prerequisite: Artificial coverage

Once per battle, when your pokémon enters the battlefield, raise 1 of their stats of your choice by 1 stage. This cannot raise their Accuracy, Evasion or their highest stat with this trait.

Last Stand

Prerequisite: Finale coverage

Once per battle, when your pokémon's Stamina would be reduced to 0 by a non-allied effect, recover it to 50% instead, however, at the end of their next turn, they're knocked out.

Aura Reading

Prerequisite: Aura coverage

Your pokémon can spend their Quick action to gain 1 of the following information about a pokémon up to 9m away from you:

- What moves they have;
- What traits they have;
- What value they have in Stamina, Maximum Stamina, Defense and Special Defense.

Additionally, their moves gain a bonus of +1 to hit targets that had Aura Reading or the Intel (action) used against them.

Dodge Roll

Prerequisite: Spinning coverage

Your pokémon's Defense Curl (move) gains "Easy" and can now be used as a Quick action.

Additionally, after they use a Spinning tagged move, they can spend their Quick action to move a number of meters equal to your tier.

Shed Skin

Prerequisite: Bug Type

Your pokémon can spend their Quick Action to be cured from one Status condition. This trait has cooldown 1.

Pickpocket

Prerequisite: Dark Type

Your pokémon's damaging moves gain Knocked.

Draconic Heritage

Prerequisite: Dragon Type

Choose 1 type between Grass, Fire, Water and Electric. After that, choose between the Physical, Special and Status category. Your pokémon gains Natural coverage of that type and category combination.

High Voltage

Prerequisite: Electric Type

Your pokémon becomes immune to Sleep.

Aroma Veil

Prerequisite: Fairy Type

Debuffs can't force your pokémon to use or don't use a move. Additionally, your pokémon can spend their Quick action to give another pokémon up to 5m away from them the same effect until the end of that pokémon's next turn.

Steadfast

Prerequisite: Fighting Type

When your pokémon is inflicted Flinch, raise their Speed 1 stage. Additionally, at the end of the round, raise their initiative by 3.

Magma Armor

Prerequisite: Fire Type

Your pokémon becomes immune to Frostbite. Additionally, raise their Defense by 2.

Early Bird

Prerequisite: Flying Type

After your pokémon is inflicted Sleep, trigger on them "Buff 1 (T): When this buff ends by countdown, cure the target's Sleep". Additionally, raise their Speed by 2.

Shadow Tag

Prerequisite: Ghost Type

Your pokémon can spend their Quick action to place a Cursed Tag on the same space as a pokémon that is up to 6m away from them. For that pokémon's next 3 turns, they can't move more than 4m away from the Cursed Tag. This trait has cooldown 3.

Leaf Guard

Prerequisite: Grass Type

Your pokémon can spend their Quick Action to be cured from 1 Status condition. This trait has cooldown 2.

When using this trait in Harsh Sunlight, it doesn't enter in cooldown.

Arena Trap

Prerequisite: Ground Type

Right after your pokémon uses a Ground type move, they can spend their Quick action to create 3 walls in free spaces that are 2m away from the triggering move's target or epicenter (if it were an AoE move).

These walls block line of sight and can't be moved through, but can be destroyed, having Stamina equal to your Tier x 10, but Defenses, Speed or typing. This trait has cooldown 3.

Natural Insulator

Prerequisite: Ice Type

Your pokémon becomes immune Paralysis. Additionally, raise their Special Defense by 2.

Generic Potential

Prerequisite: Normal Type

Your pokémon now can learn moves from the Normal Exclusive category as if they were from standard Normal type moves. Additionally, raise one of their stats of your choice by 1.

Poison Touch

Prerequisite: Poison Type

Your pokémon's Melee damaging moves gain "25% Poison". Non-melee damaging moves gain "15% Poison" instead.

Magic Guard

Prerequisite: Psychic Type

Whenever your pokémon would lose Stamina to an effect without damage roll, they lose half of it instead (rounded up).

Sturdy

Prerequisite: Rock Type

Damaging moves can't deal more X damage to your pokémon, where X is half their maximum Stamina (rounded up). Apply the reduction after critical hit and effectiveness.

Clear Body

Prerequisite: Steel Type

Your pokémon's stat stages can't be reduced by any opponent effect. Your pokémon's base stat stage can still be reduced.

Water Veil

Prerequisite: Water type

Your pokémon becomes immune to Burn. Additionally, raise their HP by 2.

Offensive

Any Trait under this list has the prerequisite of being the Speedster, Brawler or All-Rounder archetype.

Reliable Power

Once per round, your pokémon can choose to reroll their tier in dice on a damage roll.

Competitive

Prerequisite: Special or Mixed sub-archetype

When one of your pokémon's stat stages would be reduced by an opponent's effect, they can spend their Interrupt action to raise their Special Attack by 1 stage. If the stat lowered was Special Attack, raise it by 2 stages instead.

Defiant

Prerequisite: Physical or Mixed sub-archetype

When one of your pokémon's stat stages would be reduced by an opponent's effect, they can spend their Interrupt action to raise their Attack by 1 stage. If the stat lowered was Attack, raise it by 2 stages instead.

Legendary Attack

Prerequisite: Having a damaging Signature Move, Tier III, Unique — Legendary

Your pokémon's Signature Move is considered as 1 tier above. When acquiring this trait, choose 1 of the following effects. Their Signature Move receives the chosen effect.

- "30% Drain";
- "Boomerang", however the cooldown is raised by 2;
- "Self: 50% [Stat] +1", where [Stat] is one stat, except Evasion, of your choice;
- If the move is Melee or Ranged, its targeting becomes AoE: Burst X_m for Melee, where X is equal to the move's tier, and Line A_{x2m}, where A is equal to the move's tier x 2;

Multiply any numbered keyword received by this trait by a value equal to the move's cooldown + 1.

Itching Powder

Prerequisite: Powder coverage

Your pokémon can spend their Quick action to change the category of their next Powder tagged move to Physical or Special (your choice).

The damage category of the move is based on their tier, starting with d1 at tier I, d2 at tier II, d4 at tier III and d6 at tier IV or higher.

Metamagic

Prerequisite: Magic coverage

Your pokémon can spend their Quick action to change the cooldown and effects of their next Magic tagged move with the effects and cooldown of any of their other Magic tagged moves.

Once per battle, they can also change their next Magic tagged with the effects and cooldown of any of their moves instead.

Hidden Versatility

Prerequisite: Nature coverage, Tier II

Your pokémon gains 1 additional MA and a move slot that can only be filled with Hidden Power (move).

Additionally, Hidden Power gains "Dual type: X", where X is a type that you have to choose when acquiring this trait.

Covering the Basics

Prerequisite: Tier II

Your pokémon's tier I moves (before upgrading) that spend gain the following benefits:

- Ranged moves gain your tier as range;
- Melee moves gain "Moving";
- AoE moves gain area: Blast, Burst and Cone moves gain +1_m while Lines have its length increased by 2_m and its width by 1_m;
- Moves with % [Status Condition] keyword trigger chance increased by 15%;
- Moves with % stat stage change have their trigger chance increased by 30%;

Technician

Prerequisite: Covering the Basics trait, Tier III

When your pokémon is learning a move with base damage category of d4 or below (before STAB), you can choose to pay 1 extra MP to raise its damage category by 1.

Micro over Macro

Prerequisite: Technician trait, Tier IV

Your pokémon gains 2 additional Move Slots. Additionally, they can spend your Quick Action to make your next tier I or tier II move gain “Double”. This effect has cooldown 2.

Affective Memory

Prerequisite: Weather (Any) or Terrain (Any) natural Coverage, Unique Trait – Climate

Choose a weather/terrain which your pokémon has coverage with. As a Quick action, trigger any round and turn start effects that require that weather or terrain on the battlefield. Then, until the end of their turn, they can treat the battlefield as if it had the chosen weather/terrain instead of the current one to trigger any effects. This trait has cooldown 2.

Additionally, if you choose a weather with this trait, they become immune to that weather’s negative effects.

Climate Force

Prerequisite: Affective Memory trait

While your pokémon is in the weather/terrain that you chose with Affective Memory, your damaging moves from a synergic type with that weather/terrain have their damage category raised by 1.

If you chose a terrain in Affective memory, your moves from a synergic type of that terrain additionally gain “Sharpness 15%”.

Defensive

Any Trait under this list has the prerequisite of being the Guardian, Support or All-Rounder archetype.

Reliable Protection

Once per round, your pokémon can choose to reroll their tier in dice on a damage reduction roll.

Advanced Resistance

Your pokémon becomes immune to opponent's Status moves of a type that they're immune to.

Additionally, they gain the following bonuses if they're getting hit by a move of a type that they resist:

- Moves with X% keywords have their X amount halved (rounded down), with the exception of Recoil.
- Moves with [Keyword] X has its X reduced by a value equal to your tier. If it becomes 0, you're not affected by that keyword.

Covering the Holes

Prerequisite: Have 5+ weakness (counts double weakness as 2)

Your pokémon becomes neutral to one of the types that you're weak to (even double weakness).

Additionally, once per battle, when they're targeted by an effective damaging move, they can spend their Interrupt action to become neutral to that type instead until the end of the round.

Legendary Aid

Prerequisite: Having a Status category Signature Move, Tier III, Unique – Legendary

Your pokémon's Signature Move is considered as 1 tier above. When acquiring this trait, choose 1 of the following effects. Their Signature Move receives the chosen effect.

- "50% [Stat] +1", where [Stat] is one stat, except Evasion, of your choice.
- "Buff 1: the target rolls 2 additional die on their Accuracy check to hit, to avoid moves, on their damage and damage reduction rolls.";
- If the move is Melee or Ranged and doesn't have the Double/Triple keyword, it gains "Double", however its cooldown is raised by 1.

Multiply any numbered keyword received by this trait by a value equal to the move's cooldown + 1.

Trapper

Prerequisite: Hazard coverage, Unique Trait - Hazard

Once per battle, when your pokémon enters the battlefield, they can use a move with the Scatter keyword as an Interrupt action and without starting its cooldown.

Lasting Spores

Prerequisite: Powder coverage

Right after your pokémon uses a Powder tagged move, they can spend their Quick action to Scatter 3 hazards up to 5m away from the triggering move's target. The hazards have the same effect as the move that triggered this trait. This trait has cooldown 1.

Hidden Capabilities

Prerequisite: Nature coverage, Tier II

When acquiring this trait, choose a Status Condition, except Sleep and Flinch. Your pokémon gains 1 additional MA and a move slot that can only be filled with Hidden Power (move).

Additionally, your pokémon's Hidden Power (move) gains "50% X", where X is the chosen Status Condition.

Space Warp

Prerequisite: Cosmic coverage

Right before or after your pokémon uses a Cosmic tagged move, they can spend their Quick action to teleport any pokémon that they can see up to 2m away from its position.

Rough Skin

Unique Trait - Retaliation

When your pokémon is targeted by a Melee move, after all effects are resolved, deal half their Defense (rounded up) x their tier as damage to the attacker. If the triggering move hit your pokémon, double the damage dealt.

Damage dealt by this trait follows the standard damaging move rules as if it were a dX Physical move. The dX starts as d1 at tier I, raised by 1 for every tier you have above it, up to d10 at tier VI.

Mirror Shields

Unique Trait - Retaliation

When your pokémon is targeted by a Ranged move, after all effects are resolved, deal half their Special Defense (rounded up) x your tier as damage to the attacker. If the triggering move hit your pokémon, double the damage dealt.

Damage dealt by this trait follows the standard damaging move rules as if it were a dX Special move. The dX starts as d1 in tier I, raised by 1 for every tier you have above it, up to d10 at tier VI.

Elemental Retribution

Prerequisite: Rough Skin or Mirror Shields trait

Choose one of your pokémon's types. When they trigger either Rough Skin or Mirror Shields trait, roll a d100. If the result is 30 or less, apply to the attacking pokémon the effect of the chosen type. Roll the d100 twice and take the lowest value if the triggering move hits them.

- Bug type: reduce the attacker's Evasion by 1 stage. The maximum result is increased to 50.
- Dark type: trigger the Knocked keyword. The maximum result is increased to 50;
- Dragon type: your pokémon can immediately spend their Interrupt action to use a damaging move with base damage category of d6 or less against the attacker. The maximum result is lowered to 10;
- Electric type: inflict Paralysis;
- Fairy type: inflict Infatuation;
- Fighting type: reduce the attacker's Defense by 1 stage. The maximum result is increased to 50;
- Fire type: inflict Burn;
- Flying type: your pokémon can immediately move up to 3m in any direction. This movement doesn't trigger any effect from the attacking pokémon. The maximum result is increased to 50;
- Ghost type: the attacker's triggering move has its cooldown raised by 2;
- Grass type: roll a d6 to inflict a condition. In 1 or 2, inflicts Poison, in 3 or 4, inflicts Paralyze and in 5 or 6, inflicts Sleep. This count as a Powder tagged move effect;
- Ground type: reduce the attacker's Speed by 1 stage. The maximum result is increased to 50;
- Ice type: inflict Frostbite.

➤ Normal type: your pokémon recovers Stamina equal to the damage dealt by either Rough Skin or Mirror Shield trait;

➤ Poison type: inflict Poison;

➤ Psychic type: inflict Confusion;

➤ Rock type: the damage dealt by either Rough Skin or Mirror Shields trait is doubled (before defenses);

➤ Steel type: reduce the attacker's Accuracy by 1 stage;

➤ Water type: reduce the attacker's Special Defense by 1 stage. The maximum result is increased to 50;

Counter Blast

Prerequisite: Elemental Retribution trait

Your pokémon can now trigger Rough Skin and Mirror Shields traits on damaging AoE moves.

Additionally, when they're targeted by a damaging AoE move, they can choose to spend their Interrupt action to reduce the triggering move's damage to 0 (after effectiveness and critical hit) and redirect the area to anywhere within the range, as if they used the triggering move.

All opponent's pokémon in the redirected area take half of the same damage that the original move would've dealt (rounded up). Apply reductions as if they used the move, with its damage category reduced by 1. This effect has cooldown 4.

Weather Caller

Prerequisite: Weather (Any) or Terrain (Any) coverage, Unique Trait – Climate

Your pokémon can learn one move with the Summon Weather/Terrain X keyword from one of their coverages as if it was a tier I move. If they already have this effect, they gain 1 additional MA and a move slot that can only be filled with a move with the Summon Weather/Terrain X keyword.

Additionally, if they acquired this trait through a Weather (Any) coverage, they become immune to that weather's negative effects.

Climate Change

Prerequisite: Weather Caller trait

When your pokémon enters the battlefield they can use the chosen move in Weather Caller as a Interrupt action and without starting its cooldown.

The terrain or weather summoned this way lasts only 2 rounds. This effect has cooldown 4.

Speedster

Any Trait under this list has the prerequisite of Speedster archetype.

Tough Claws

Prerequisite: Clawing Coverage

Your pokémon can spend their Quick action to give their next move with the Clawing tagged move “Sharpness 15%”.

Sharp Sword

Prerequisite: Slashing Coverage

Your pokémon can spend their Quick Action to roll their next Slashing tagged dice to Critical Hit as 1 category lower (d20 goes to d12).

Steel Feet

Prerequisite: Kicking Coverage

Your pokémon can spend their Quick action to give their next move with the Kicking tag “Moving 1” or “Knockback X”, where X is equal to their tier.

Sharp Spear

Prerequisite: Piercing coverage

Your pokémon can spend their Quick action to make their next Piercing tagged move, on hit, target the first opponent pokémon up to 3m behind the original target.

That pokémon rolls to avoid this move. If it hits, deal damage equal to half the damage received by the original target (after defenses but before effectiveness and critical hit, rounded up).

Additionally, apply to that pokémon the same effects of the triggering move. The target can reduce the damage received as usual, treating this move as 2 categories below the triggering move. This trait has cooldown 1.

Quick Reaction

Prerequisite: Feline Coverage

Your pokémon's Feline tagged moves gain “Adaptable”. Additionally, right after they enter the battlefield, they can spend a Free action to gain +4 on their next initiative and a bonus of +1 to both hit and avoid moves, both until the end of the round. This trait has cooldown 2.

Air Torrent

Prerequisite: Wind coverage

Your pokémon can spend their Quick action to change their next AoE Wind tagged move to Ranged 7m. Additionally, the triggering move gains “Margin of Success +1”. This trait has cooldown 1.

Tornado Style

Prerequisite: Spinning coverage, Unique Trait — Spinning

Your pokémon can spend their Quick action to change their next damaging Melee and Spinning tagged move targeting to become Burst Xm, where X is the move's tier.

Additionally, your pokémon's Burst range moves gain “Moving”.

Magic Gathering

Prerequisite: Magic coverage

Your pokémon can spend their Free action to give their next Magic tagged move “Charge (Quick):. Damage Category +1”. This trait has cooldown 2.

Reverberation

Prerequisite: Sound coverage

Your pokémon's Sound tagged moves gain “20% Confusion” if they're Ranged, or “10% Confusion” otherwise. All your Sound tagged moves gain “Adaptable” as well.

Additionally, they gain half your tier (rounded up) as additional damage dice against targets in Confusion.

Run Away

Once per round, during your turn, after your pokémon resolves the effect of a Melee move against an opponent pokémon, they can spend their Quick action to move up to half their Movement Speed (rounded up) in meters.

Acceleration

Prerequisite: Run Away trait

Your pokémon gains a bonus of +3 to their initiative. Once per action, when your pokémon moves by their own effect, their next Accuracy Check to either hit or avoid moves receives a bonus of +1.

Always Ready

Prerequisite: Acceleration trait

Once per battle, when your pokémon enters the battlefield, if their initiative is the highest one, raise their Speed by 1 stage. If they did so, they can choose to become in Quick action Debt to also raise their Evasion by 1 stage.

Light Speed

Prerequisite: Always Ready trait, Tier III

For every 6m that your pokémon moves or when they trigger the Always Ready trait, they gain 1 Velocity counter. Whenever any pokémon moves, as a Free action, your pokémon can spend any number of their counters the following way:

- For 1 counter, your pokémon moves up to 2m in any direction;
- For 2 counters, your pokémon gains a bonus of +2 to avoid the next move that targets them;
- For 4 counters, they immediately switch out. The next pokémon receives your pokémon Speed and Evasion stat stage changes (after taking the base stat changes into account);

Velocity counters are lost on switch out.

Moxie

Exclusive and Unique trait - Sweeper

When an opponent pokémon is knocked out, raise your pokémon's Attack by 1 stage.

Mastery

Exclusive and Unique trait - Sweeper

When an opponent pokémon is knocked out, raise your pokémon's Special Attack by 1 stage.

Sweeping Potencial

Prerequisite: Mastery or Moxie trait

Every time your pokémon triggers either Mastery or Moxie trait, they gain 2 Sweep Counters. At the start of every round, they must spend all their Sweep counters to gain the following bonuses:

- For 1 counter, they gain a bonus +3 to their initiative until the end of the round;
- For 2 counters, they roll half their tier (rounded up) as additional dice on their next damage roll.
- For 3 counters, until the end of their next turn, they gain a bonus of +3 to hit their next damaging move.

Sweep counters are lost on switch out.

Confident Entrance

Prerequisite: Sweeping Potential trait

Once per battle, when your pokémon enters the battlefield, raise their Attack (if they have Moxie trait) or Special Attack (if they have Mastery trait) by 1 stage.

If your team has at least as much conscious pokémon as the opponent team, raise it by 2 stages instead.

Snowball Effect

Prerequisite: Confident Entrance trait, Tier III

Every time your pokémon triggers either Moxie or Wisdom trait, they recover 10% of their maximum Stamina (rounded up) and gain 1 additional Sweep counter for every other opponent pokémon already knocked out.

Keen Eye

Your pokémon can't have their Accuracy stat stage lowered. Additionally, they can spend their Quick action to make their next move ignores the targets' Evasion stat stages above their base stat stage.

Accuracy's Advantage

Prerequisite: Keen Eye trait

When your pokémon has 2 or more leftover successes in an Accuracy Check to hit using a damaging move, the triggering move rolls additional damage dice equal to half their tier (rounded up).

Precision & Consistency

Prerequisite: Accuracy's Advantage trait

Your pokémon can spend their Quick action to gain a bonus equal to their tier to hit their next move, however, they roll less dice to hit equal to their tier as well. This effect cannot make your pokémon roll less than 1 die in your Accuracy Check to hit.

Sniper

Prerequisite: Precision & Consistency trait, Tier III

For every 3 leftover successes your pokémon has in an Accuracy Check to hit using a damaging move, the triggering move gains "Critical Hit Margin +1".

Additionally, their Critical hits multiply the damage dealt by 1.75 instead of 1.5.

Natural Connection

Your pokémon's moves that receive STAB gain a bonus of +1 to hit.

Additionally, if your pokémon is single type, the triggering moves roll additional dice to hit equal to their tier.

Critical Moment

Prerequisite: Natural Connection trait

Choose one of your pokémon's types to be their Natural type. While their Stamina is under 35% (rounded up), their moves from the chosen type have their damage category increased by 1.

Elementalize

Prerequisite: Critical Moment trait

Choose a coverage. Your pokémon can spend their Quick action to give their next move of the chosen coverage "Dual Type (X)", where X is their Natural type.

Additionally, once per round, when they make the damage roll of a move from their Natural type, they can spend a Free action to roll additional damage dice equal to half tier (rounded up).

Adaptability

Prerequisite: Elementalize trait, Tier III

Your pokémon receives the following bonuses:

- STAB raises your pokémon's move's damage category by 2 instead;
- At the end of every round, if your pokémon didn't use a damaging move this round, choose a move from the Natural type. Its cooldown is reduced by 1;
- For the first time in a battle, when your pokémon Stamina drops below 35%, opponents up to 5m away from them loses 25% of their maximum Stamina (rounded up) or 35% if they're weak to the Natural type.

Brawler

Any Trait under this list has the prerequisite of Brawler archetype.

Impactful Indirects

Your pokémon can spend their Quick action to roll their next Status move with Attack or Special Attack (whichever is higher).

Rock Head

Prerequisite: Risky coverage, Unique Trait — Risky

Right after your pokémon loses Stamina to their own move's effect, they can spend their Quick action to recover half of the Stamina lost (rounded down).

Reckless

Prerequisite: Risky coverage, Unique Trait — Risky

Your pokémon's Risky tagged moves have their damage category raised by 1, however, the triggering moves with the Recoil keyword gain "25% Recoil", otherwise, the amount of % self damage is increased by 1.5 times.

Strong Jaw

Prerequisite: Biting coverage

When your pokémon inflicts Flinch, they can choose to enter in Quick action Debt to make the triggering pokémon become in Standard action Debt.

Additionally, their Biting tagged moves gain "10% Flinch".

Iron Fist

Prerequisite: Punching coverage

Your pokémon's Punching tagged moves gain "Knockback X", where X is your tier.

Additionally, when their Punching tagged moves deal damage with the Knockback keyword, they can apply the triggering move effects, except the Knockback keyword, on the pokémon which received damage. Debuffs applied this way only last for 1 round/turn.

Strong Grip

Prerequisite: Whipping coverage

Your pokémon can spend their Quick action to give their next Whipping tagged move Binding. This effect has Cooldown 3.

Additionally, their Binding keyword makes the target to lose 5% more maximum Stamina.

Longer Shooting

Prerequisite: Beam coverage

Your pokémon's Ranged and Beam tagged moves have their range raised by 2m, while their Line targeting and Beam tagged moves have their length raised by 1m.

Additionally, they can spend their Quick action to give their next Beam tagged move "If the target is 5m or more away from the user, Sharpness 20%. If the target is 8m or more away from the user, Damage Category +1.". This effect has cooldown 2.

Afternoon Nap

Prerequisite: Lazy coverage

Your pokémon receives the following bonuses:

- When your pokémon is inflicted with Sleep, they gain 1 Stockpile counter;
- While your pokémon is in Sleep, your pokémon gains half their tier as additional damage reduction dice;
- When your pokémon is cured from sleep, trigger on them "Buff 1 (T): The target's damaging moves gain "Sharpness 25%"".

Shrilling Voice

Prerequisite: Voice coverage, Unique

Your pokémon can spend their Quick action to give their next move with the Voice tagged move "Sharpness 15%".

Additionally, all your pokémon's Voice tagged moves gain "Adaptable"

One Tap

Prerequisite: Clawing coverage

Your pokémon can spend their Quick action to increase their next Clawing tagged move "Damage Category +1", however, after the move's resolution, they become in Standard action Debt.

Resilience

Choose 1 type. Your pokémon resists it one step further. You cannot choose a type that they're weak to nor one that you already double resist.

Additionally, they gain 6 maximum Stamina per tier.

Thick Fat

Prerequisite: Resilience Trait

Choose another type. Your pokémon resists it one step further. You cannot choose a type that you already double resist.

Additionally, when rolling to avoid a damaging move from a type that they resist, they can spend their Interrupt action to roll the Accuracy Check to avoid it with their HP instead.

Tough Skin

Prerequisite: Thick Fat trait

Once per round, when your pokémon is targeted by a damaging move, they can spend a Free action to make the damage reduction roll with their HP instead of the relevant defense.

Legendary Regeneration

Prerequisite: Tough Skin trait, Tier III

Whenever your pokémon's Stamina is reduced, they gain 1/3 of the Stamina lost (rounded down) as Regen counters. Regen counters are lost on switch out.

At the start of their turn, they must spend all Regen counters to recover an amount of Stamina equal to the number of counters spent.

Gluttony

Your pokémon can consume berries or dish items as a Quick action and can choose not to consume a berry when it reaches its triggering condition.

Additionally, right after they consume a berry or dish item, they can spend a Free action to give their next damaging move, until the end of their next turn, "50% Drain".

Pickup

Prerequisite: Gluttony trait

After your pokémon consumes a berry or a dish item, they drop a Crumb in a random free space 3m from them. Crumbs are held items that trigger when your pokémon's Stamina drops below 50% (rounded up). When triggered, the pokémon reduces the cooldown of 1 of their moves by 1.

Additionally, your pokémon can equip held items as a Quick action.

Cheek Pouch

Prerequisite: Pickup trait

Your pokémon can hold 2 items at the same time, as long as at least 1 one of them is a berry, a dish item or a Crumb.

Complete Satisfaction

Prerequisite: Cheek Pouch Trait, Tier III

When your pokémon consumes a berry, a dish item or a Crumb, they gain 1 Satisfaction counter.

They lose half of their current counters (rounded down) on switch out. Additionally, they gain the following bonuses:

- If your pokémon has at least 1 Satisfaction counter, at the end of every round, they recover 10% of their maximum Stamina;
- If your pokémon has at least 2 Satisfaction counter, their moves gains half their tier (rounded up) as additional damage dice;
- If your pokémon has at least 3 Satisfaction counter, their moves gain "Margin of Success +1";

Leg Strength

Choose between Attack and Special Attack. Your pokémon's Movement Speed is now calculated as 4 + the chosen stat/3 (rounded up) instead.

Additionally, when your pokémon is targeted by a Status move, they can spend their Interrupt action to avoid it using the chosen stat instead. This effect has cooldown 1.

Full Force Charge

Prerequisite: Leg Strength trait

Your pokémon can use the Rushing Melee's targeting effect as a Free action instead.

Additionally, when they're triggering Rushing, the bonus is increased to half their tier (rounded up) instead.

Lethal Rush

Prerequisite: Full Force Charge trait

Your pokémon can now use Rushing without any prerequisite. Also, they can choose to receive the Rushing bonus as additional damage dice instead.

Additionally, their Melee moves with the Moving or Dashing keyword can receive additional dice for both bonuses with their Rushing effect.

Kinetic Impact

Prerequisite: Lethal Rush trait, Tier III

Once per round, when your pokémon is using Rushing, for every 5m they moved during this turn, choose 1 of the following effect to give to the triggering move:

- This move gains “Knockback 3”;
- This move gains Knockback keyword deals 5% of the target’s maximum Stamina (rounded up) for every meter instead;
- This move loses its Knockback keyword, but gains a third its value (rounded up) as additional damage dice;

Intense Force

Exclusive trait

When your pokémon rolls an Accuracy Check to hit a move using either their Attack or Special Attack stat, they roll additional dice equal to half their tier (rounded up). If the move hits, it rolls the same amount as additional damage dice.

Body Strength

Prerequisite: Intense Force trait

Your pokémon can spend their Quick action to increase their Attack, Special Attack, Defense and Special Defense in 1 for every 10 Stamina they have left, up to twice their tier. This effect lasts until a move that either you used or targeted you are resolved.

Wall Breaker

Prerequisite: Body Strength trait

Your pokémon can spend their Quick action to give their next damaging move “Sharpness X%”, where X is equal to their Attack or Special Attack (whichever is higher), up to 20%. If your pokémon already used Body Strength this turn, they can immediately use this trait as an Interrupt action instead.

Full Brunt

Prerequisite: Wall Breaker trait, Tier III

When your pokémon uses a damaging move, as a Free action, they can choose to become in Standard action Debt to double their Intense Force bonuses and the value of the Sharpness keyword from the triggering move.

All-rounder

Any Trait under this list has the prerequisite of All-rounder archetype.

Dark Side

Prerequisite: Tier II, Unique trait - Sides

Choose one of your pokémon's stats. They lose 1 point in the chosen stat. At tier IV and VI, lose another 1 point.

Then, your pokémon gains 1 point in another stat for every tier they have, up to 2 points into a single stat.

Bright Side

Prerequisite: Tier II, Unique trait - Sides

Choose one of your pokémon's stats. They gain 1 point in the chosen stat for every tier they have.

Then, your pokémon loses 1 point in another stat. At tier IV and VI, lose 1 point in another stat that wasn't raised or lowered by this trait.

Exotic

Choose one trait which your pokémon fits the prerequisites besides at least 1 of its coverage's prerequisites. They acquire that trait.

Additionally, they gain the chosen trait's required coverage as Standard coverage.

Strange Anatomy

Choose one trait which your pokémon fits the prerequisites besides at least 1 of its type prerequisites. They acquire that trait.

Additionally, they gain 1 additional MA.

Deep Connection

Prerequisite: Strange Anatomy or Exotic trait.

Choose one of your pokémon's Standard coverage. It becomes a Natural coverage.

Then, choose one of their Natural coverages or one of their types. Their moves of the chosen type or with the gain "For the user's own effects, this move is treated as having every tag and being from every type".

New Horizons

Prerequisite: Deep Connection trait.

Choose one coverage from your pokémon species' other archetype. They gain that coverage as Natural coverage. Additionally, they gain 1 additional MA and an additional Move Slot.

Jack of All Trades

Prerequisite: New Horizons trait, Tier III

Your pokémon gains STAB with all of their Natural coverages. Additionally, choose 1 of their type coverages. They resist that type 1 step further.

Prototyping

Choose one archetype, except All-Rounder. Your pokémon can now learn generic moves as if they were from that archetype. Additionally, raise their stats based on the chosen archetype:

- **Speedster:** +1 Speed and +1 Attack/Special Attack (whichever is higher);
- **Brawler:** +1 HP and +1 Attack/Special Attack (whichever is higher);
- **Support:** +1 Speed and +1 Defense/Special Defense (whichever is higher);
- **Guardian:** +1 HP and +1 Defense/Special Defense (whichever is higher);

Blueprinting

Prerequisite: Prototyping trait

Your pokémon gains one of the listed coverage below as Natural coverage, based on their archetype of choice in Prototyping.

If your pokémon already has that coverage as Natural coverage, they gain 2 additional MA instead.

- **Speedster:** Kicking or Magic;
- **Brawler:** Punching or Nature;
- **Support:** Cursing or Wall;
- **Guardian:** Dancing or Protection;

Multiclassing

Prerequisite: Blueprinting trait

Your pokémon receives one of the listed effects, based on their archetype of choice in Prototyping.

➤ **Speedster:** They gain a bonus of +2 to hit moves. Additionally, they can spend their Quick action to move up to their tier in meters.

➤ **Brawler:** When rolling to deal damage, they roll 2 additional dice. Additionally, they can spend their Quick action to give “Sharpness 15%” to their next damaging move.

➤ **Support:** They gain a bonus of +2 to avoid moves. Additionally, they can spend their Quick action to reduce one of their move’s cooldown by 1.

➤ **Guardian:** When rolling to reduce damage, they roll 2 additional dice. Additionally, they can spend their Quick action to recover 10% of their maximum Stamina.

Morphing

Prerequisite: Multiclassing trait, Tier III

Your pokémon can now acquire up to 2 traits as if you were from the archetype chosen in Prototyping (including Exclusive traits).

Additionally, your pokémon acquires 1 additional trait and raises the stats raised by Prototyping by 1.

Support

Any Trait under this list has the prerequisite of Support archetype.

Illuminate

Prerequisite: Light coverage

Your pokémon can spend their Quick action to light up opponents up to 5m away from them until the end of the round.

Any moves against a pokémon that is lightened gains a bonus of +1 to hit. They also reveal any opponent's Hidden hazards in the lightened area.

Sweet Veil

Prerequisite: Sweet coverage

Your pokémon can spend their Quick action to spread a sweet aroma in a Burst of 5m around you that lasts until the end of the round.

Allies in the sweet aroma are immune to Sleep and, if they're in Sleep, they're cured from it.

Clouding

Prerequisite: Cursing coverage

Your pokémon can spend their Quick action to give their next Cursing tagged move "Debuff 1: the target gains a penalty of -1 to hit". This trait has Cooldown 1.

Prankster

Prerequisite: Drama coverage

Your pokémon can spend their Quick action to give one of your Drama tagged moves "Priority 1 (Prankster)". This effect has cooldown 2.

Dance Teacher

Prerequisite: Dancing coverage

Your pokémon can spend their Quick action to change their next Dancing tagged move range to become Ranged 5m instead. This trait has cooldown 2.

Aura of Fear

Prerequisite: Fearsome coverage

Opponents up to 4m away of your pokémon take 15% more damage to your damaging moves, before defenses, critical hit and effectiveness. Your pokémon's damaging moves don't receive this bonus.

Lovey Dovey

Prerequisite: Cute coverage

When a pokémon in Infatuation uses a damaging move, your pokémon can spend their Interrupt action to choose who pokémon that move must target. This can include themselves, making them ignore the Infatuation rules for that move.

Additionally, all your pokémon's Cute tagged move gain "30% Infatuation".

Power Infusion

Prerequisite: Healing coverage

Your pokémon can spend their Quick action to give their next Healing tagged move "Buff 2 (T): the target's next damaging move deals the user's Defense or Special Defense (their choice) as additional damage".

Shield Link

Prerequisite: Wall coverage

Right after your pokémon uses a Wall tagged move, they can spend their Quick action to receive half of the temporary Stamina applied by the Shield keyword for themselves that lasts for 1 round.

If the triggering move didn't have the Shield keyword, your pokémon instead receives 5% x the triggering move's cooldown of their maximum Stamina (up to 25%, rounded up) as temporary Stamina for the same duration.

Synchronize

If your pokémon is in a Status Condition, they can spend their Quick action to inflict a pokémon up to 5m away from them one of their Status Conditions.

Once per battle, they may trigger this effect using a Status Condition on a pokémon up to 9m away from them. After that, cure the same Status Condition from that pokémon.

Contagious

Prerequisite: Synchronize trait

Your pokémon's moves with X% [Status Condition] keyword have its % chance doubled. After they inflict a Status Condition with a move, roll a d100.

If the result is equal or below half the X value (rounded up), they inflict the same Status Condition to another pokémon up to 3m from the triggering move's target.

If there wasn't another pokémon for this trait to target, reduce the triggering move's cooldown by 1.

Fortified Ailment

Prerequisite: Contagious trait

Status conditions inflicted by your pokémon can't roll to be cured from a Status Condition on its first round.

Additionally, your pokémon can spend their Quick action to make an opponent pokémon up to 9m away from them have to, until the start of the next round, use a die 1 category higher when rolling to be cured from a Status Condition. This effect has cooldown 1.

Hyper Status

Prerequisite: Fortified Ailment trait, Tier III

Choose two Status Conditions. When your pokémon would inflict one of the chosen Status Condition to a target already inflicted by it, improve its effects to the following:

➤ **Trauma (Flinch):** Additionally, at the start of their next round, the pokémon becomes in Standard action Debt and Interrupt action Debt.

➤ **Hallucination (Confusion):** Additionally, if the d6 result is 3 or 4 and they spent their Standard action to use a move, they have to target a random pokémon in range instead. If there is only one pokémon in range, roll a d2, in a 1, the move misses.

➤ **Hypnotized (Infatuation):** Additionally, before the start of each of their turns, roll a d4. In a 1, the pokémon that inflicted this condition controls inflicted pokémon's actions. On a 2 or 3, they become in Standard action Debt. In a 4, nothing happens.

➤ **Incapacitated (Sleep):** Additionally, damaging moves against them are guaranteed Critical Hits.

➤ **Scorched (Burn):** The pokémon's Attack base stat stage is reduced by 3 instead. Additionally, whenever it uses a damaging move, they lose 10% of their maximum Stamina;

➤ **Frozen (Frostbite):** The pokémon's Special Attack base stat stage is reduced by 3 instead. Additionally, whenever it uses their Movement Action, they lose 10% of their maximum Stamina;

➤ **Magnetized (Paralysis):** The pokémon's Speed base stat stage is reduced by 3 instead. Additionally, whenever an opponent pokémon uses a damaging move and it damages a pokémon up to 5m away from them, the pokémon loses Stamina equal to 20% of the damage dealt (rounded up).

➤ **Ruin (Poison):** Additionally, until the end of the battle, at the end of every round, the pokémon's maximum Stamina is reduced by 10%, up to 50%;

The improved Status condition still counts as its base and can be cured as usual.

Protective Aura

Exclusive trait

Allies up to 4m away from your pokémon take 10% less damage, before defenses, critical hit and effectiveness. Your pokémon isn't affected by this effect.

Friend Guard

Prerequisite: Protective Aura trait

The damage reduction from Protective Aura is increased to 15%.

Additionally, once per battle, when a pokémon inside of the Protective Aura range is hit by a damaging move, your pokémon can spend their Interrupt action to increase the reduction to 30% until the end of the round.

Flash Shield

Prerequisite: Friend Guard trait

Protective aura now targets allies up to 6m away from your pokémon instead.

Additionally, once per battle, when a pokémon inside of the Protective Aura range is hit by a damage move, they can spend their Interrupt action, or a Free action if they already used Friend Guard, to make a pokémon resist the triggering move's type one step further.

Safety Net

Prerequisite: Flash Shield trait, Type III

At the start of every battle, your pokémon gains 2 Safety counters, which are lost at the end of every battle.

As a Free action during any moment, they can spend 1 Safety counter to instantly reset 1 of their trait's cooldown or to let them use a "Once per battle" trait effect again.

Muscle Memory

Choose one tier I Status move that your pokémon knows. They can use it as a Quick Action, however, when using the chosen move this way, its cooldown is raised by 1.

As 1 TC, you can change the chosen move from this trait.

Sharing is Caring

Prerequisite: Muscle Memory trait

Your pokémon can use their Quick action to change their next tier I or II Status move with Self targeting to become Ranged 5m instead.

Outstanding Mentor

Prerequisite: Sharing is Caring trait

Your pokémon can spend their Quick action to make their next move that targets another pokémon and raises their stat stages to raise 1 stage in another stat as well.

Additionally, now they can use Sharing is Caring on tier III moves as well.

Quick Thinking

Prerequisite: Outstanding Mentor trait, Tier III

Your pokémon gains 1 additional Quick action per round that they can only spend to either use the move chosen by Muscle Memory, use Sharing is Caring or Outstanding Mentor traits.

Medicinal Proficiency

Prerequisite: Healing or Wall Natural coverage | Unique trait - Medicine

Your pokémon gains 1 additional MA and 1 Move Slot that can only fit Wall or Healing tagged moves.

Medicinal Knowledge

Unique trait - Medicine

Your pokémon acquires either Healing or Wall as Natural coverage. Additionally, they gain 1 additional MA.

Healing Touch

Prerequisite: Medicinal Proficiency or Medicinal Knowledge trait

When your pokémon uses the Shield or Heal keyword, they can roll it with their own Defense or Special Defense stat (whichever is higher) instead.

Additionally, once per round, they can treat any dice in a non-d1 damage roll for the Shield or Heal keyword that resulted in 1 as a 2 instead.

Double Safety

Prerequisite: Healing Touch trait

When your pokémon uses a move with the Shield keyword, trigger the Heal keyword as 2 damage categories lower on the same targets.

When your pokémon uses a move with the Heal keyword, trigger Shield 2 as 1 damage category lower on the same targets.

If this effect would make you roll for a damage category lower than d1 and, then the Shield/Heal amount is equal to twice their tier instead.

Panic Button

Prerequisite: Double Safety trait, Tier III

When an allied pokémon, beside themselves, would have their Stamina reduced to 0, they can spend their Interrupt action to use a Healing or Shield tagged move on it. If the used move is Melee, it gains "Dashing (Out)". This effect has cooldown 4.

Guardian

Any Trait under this list has the prerequisite of Guardian archetype.

Intimidate

Prerequisite: Fearsome coverage

When your pokémon enters the battlefield, they can spend their Interrupt action to lower the Attack stat of all opponent pokémon by 1 stage.

Delight

Prerequisite: Cute coverage

When your pokémon enters the battlefield, they can spend their Interrupt action to lower to the Special Attack stat of all opponent pokémon by 1 stage.

Peaceful Slumber

Prerequisite: Lazy coverage

Your pokémon starts the battle with 5 Slumber counters, which are lost at the end of the battle. When your pokémon ends a round in the Sleep, they can spend a Slumber counter to recover 20% of their maximum Stamina.

Take Care

Prerequisite: Healing or Wall coverage

Right after your pokémon uses a Healing or Wall tagged move in an ally other than yourself, they can spend their Quick action to reduce the triggering move's cooldown by 1. This effect has cooldown 1.

Additionally, they can roll the Heal or Shield keyword using your own HP instead.

Dark Magic

Prerequisite: Cursing coverage

Your pokémon can lose 10% of their maximum Stamina and spend their Quick action to give their next Cursing tagged move "Locked 1" and reduce the triggering move's cooldown by 1. This trait has cooldown 2.

Overshield

Prerequisite: Protection coverage

Right after your pokémon uses a Protection tagged move, they can spend a Free action and become in Quick Action Debt to trigger "Buff 2: The target takes 20% less damage, before defenses, critical hit and effectiveness." to the pokémon targeted by the triggering move.

Analytic

Prerequisite: Artificial coverage

At the start of every round, choose 1:

- Your pokémon can spend their Interrupt action to gain a bonus of +2 to avoid the next opponent's move targeting them;
- When your pokémon makes a damage roll, if the target pokémon's initiative is higher than theirs, they gain half their tier (rounded up) as additional damage dice.

Scattering Debris

Prerequisite: Hazard coverage, Unique Trait – Hazard

When your pokémon receives a damaging move, they may spend their Interrupt action to use a Hazard tagged move of a tier lower than theirs. This effect has cooldown 2.

Bowling Style

Prerequisite: Spinning coverage, Unique Trait – Spinning

When your pokémon triggers the Moving or Pass keyword, for that movement, their Movement Speed is increased by their tier. Your pokémon can spend their Quick action to make their next Spinning tagged move gain 1 additional damage dice for every 5m they moved this turn.

Additionally, all your pokémon's Spinning coverage moves gain "Moving".

Lassoer

Prerequisite: Whipping coverage, Unique

As a Quick action, your pokémon can trigger "Knockback 3 (Any)" on a pokémon up to 4m away from them. If they did so, their next Whipping tagged move gains a bonus of +1 to hit that same pokémon. This trait has cooldown 1.

Counter Attack

After an allied pokémon up to 5m away from your pokémon is targeted by an opponent, they can spend their Interrupt Action to place a Counter mark on the attacking opponent for the next 2 rounds.

Pokémon with a Counter mark receive a penalty equal to half their tier (rounded up) to avoid your pokémon's moves.

This trait has cooldown 1. Marks are lost when either side switches out.

Endurance

Prerequisite: Counter Attack trait, Unique trait — Fortify

Whenever your pokémon places a Counter mark, raise their Defense by 1 stage.

Relaxation

Prerequisite: Counter Attack trait, Unique trait — Fortify

Whenever your pokémon places a Counter mark, raise their Special Defense by 1 stage.

Boiling Blood

Prerequisite: Endurance or Relaxation trait

When your pokémon uses a damaging move targeting a pokémon with a Counter mark, that move deals half of their lost Stamina (rounded up) as additional damage. If their Stamina is full, roll half their tier (rounded up) as additional damage dice instead.

Heavy Defenses

Prerequisite: Boiling Blood trait, Tier III

Your pokémon can roll to hit your Physical damaging moves with Defense and your Special damaging moves with Special Defense.

Additionally, when your pokémon uses a damaging move targeting a pokémon with a Counter mark, that move deals your Defense or Special Defenses stat (whichever is higher) as additional damage.

Weakening Hexes

Once per round, right after your pokémon hits a Status move, they can spend their Quick action to reduce 1 of the move's target stat stages. Roll a d6. The stat reduced is based on the d6 result, the stat reduced is Attack, Defense, Special Attack, Special Defense, Speed or Evasion, respectively.

Persistent Problems

Prerequisite: Weakening Hexes trait

When a pokémon up to 5m away from your pokémon would be cured from a status condition, they can spend your Interrupt action to make a Status category Accuracy Check against the triggering pokémon. If they hit, that pokémon isn't cured from the condition.

They can't use this trait two rounds in a row on the same target.

Contempt for the Weak

Prerequisite: Persistent Problems trait

Your pokémon can spend their Quick action to give your next damaging move "If the target has a status condition, Damage Category +1 and a bonus of +1 to hit".

Dark Knight

Prerequisite: Contempt for the Weak trait, Tier III

Your pokémon gains an additional move slot that can only fit tier II Melee or Ranged moves that have X% Status Condition keyword, where X% is 100%.

The move in that move slot can now be used as a Quick action, however, its move's base cooldown can't be reduced below 1.

Additionally, your damaging moves gain "If the target has a status condition, 30% Drain".

Magical Defense

Exclusive trait

Your pokémon can spend their Interrupt action to gain their Defense or Special Defense as additional dice to avoid a Status move.

Glass Shield

Prerequisite: Magical Defense trait

When a pokémon would be hit by a Status move, your pokémon can spend their Interrupt action to make that pokémon avoid the triggering move, even if it had the Unavoidable keyword. This trait has a cooldown 3.

Natural Cure

Prerequisite: Glass Shield trait

At the end of every round, allied pokémon up to 4m away from your pokémon, including themselves, can roll twice to be cured from a Status Condition.

Alternatively, any affected pokémon can choose to forgo the second dice and spend your Interrupt action to roll a d4. In a result 1, they're cured from 1 permanent Status Condition of their choice.

Antimagic Mastery

Prerequisite: Improved Regeneration trait, Tier III

Your pokémon gains 1 additional Interrupt action per round that they can only spend to use Magical Defense, Glass Shield, Everlasting Resolve and Antimagic Mastery traits.

Additionally, once per battle, your pokémon can spend their Standard and Interrupt action to trigger on all allied pokémon “Buff 1 (T): The target treats moves targeting them as if they didn’t have any effects. Additionally, the target can’t trigger any opponent’s effects.”.

Protector

Prerequisite: Access to Guardian tagged moves

Your pokémon gains 1 additional MA and 1 Move Slot that can only fit Guardian tagged moves.

Consistent Taunt

Prerequisite: Protector trait

Whenever your pokémon uses a Guardian tagged move, they can spend a Free action to recover 10% x the move’s base tier of your maximum Stamina, up to 30% (rounded up). This effect has cooldown 2.

All of their Guardian tagged moves have their cooldown reduced by 1.

Living Shield

Prerequisite: Consistent Taunt trait

When a pokémon up to your pokémon’s Movement Speed in meters would be hit by a Ranged or Melee damaging move, your pokémon can spend their Interrupt action to move up to their Movement Speed in meters until they’re adjacent to the target.

If they do become adjacent, the triggering move’s target is changed to your pokémon only, however, it automatically hits them as well. This trait has cooldown 3.

Guardian’s Vow

Prerequisite: Living Shield trait, Tier III

Your pokémon can spend their Quick action to place a Vow mark on an allied pokémon up to 7m away from them, not including themselves.

When a pokémon under the Vow mark receives a damaging move, reduce the damage by 20% (before defenses, critical hit and effectiveness, rounded up). However, your pokémon loses Stamina equal to the damage that was reduced.

When they place another Vow mark, the prior mark is removed. The mark is removed when either your pokémon or the marked pokémon switches out as well.

Chapter 11

Resources

Pokémon Building Tips and Examples

The Training Guide to Pocket Monsters is an extensive and complex system that may be challenging to start to get started, as you may have fear to make something suboptimal and that you may let your party down or, in the case of a GM, you may want something that you can slap into any pokémon and it will work.

While these builds will do a good enough job, they shouldn't be taken as a hard rule and that derivation will get your pokémon weaker. Some pokémon have innate synergies with different things, so it's fine to try things all and see what sticks.

General Guidelines

This section will explain how you should handle every case in this chapter.

For the move's guidelines, they'll say things like "STAB 1" and "STAB 2/Coverage 1". STAB refers to damaging moves that have the same type as your pokémon. In this instance, for Gastly, who is Ghost and Poison, it should get both a Ghost and a Poison type damaging moves.

As for "Coverage 1", "Coverage 2" and "Coverage 3", this means damaging moves that are from different types from other moves, not necessarily from different coverages.

"Archetype move" refers to picking a move that is exclusive to the building pokémon's archetype, like Helping Hand for Supports and Fortify for Brawlers.

Lastly, "Flex" means any move that the pokémon has access to, as you see fit. For quick building, you could treat this as another slot for another damaging move.

As the pokémon gets more Move Allowance, you'll start to have to take into account the different tier of the moves. All the guidelines presume that you'll have moves from the highest tier available, giving priority to the moves from top to bottom, only upgrading them if you still have MP leftover.

For pokémon from tier III or higher, there should have an additional priority of not letting your pokémon have more than 1 move that is 2 tiers below the pokémon's tier, and absolutely no move that is 3 tiers below the pokémon's tier, with the only exception being the Archetype Moves.

For traits, when saying something like "Intense Force tree", this means the line of traits that all have as prerequisite acquiring the previous trait, like Intense Force to Body Strength to Wall Breaker to Full Brunt.

Just like moves, traits priority goes from top to bottom. However, you may notice that more than 6 traits are listed: these additional ones are for cases where a pokémon gains additional traits (either generic additional traits or when they acquire an additional trait from the ones that were listed).

Speedster Guidelines

➤ Moves:

- ◇ STAB 1
- ◇ STAB 2 / Coverage 1
- ◇ Coverage 1/2
- ◇ Flex
- ◇ Archetype move

➤ Traits:

- ◇ Natural Connection tree
- ◇ Moxie/Mastery
- ◇ Defiant/Competitive
- ◇ Reliable Power
- ◇ Keen Eye

Example of a Speedster:

Fletchling	
	Physical Speedster
	Moves
	Peck
	Scratch
	Boiling Tackle
Level 2	Air Burst
Tier I	-
Traits	
Tier I	Natural Connection

Brawler Guidelines

➤ Moves:

- ◇ STAB 1
- ◇ Coverage 1
- ◇ STAB 2/Coverage 2
- ◇ Archetype move
- ◇ Flex

➤ Traits:

- ◇ Intense Force tree
- ◇ Leg Strength
- ◇ Resilience
- ◇ Thick Fat
- ◇ Reliable Power

Example of a Brawler:

Mareep	
	Special Brawler
	Moves
	Thunder Shock
	Absorb
	Pebble Shot
Level 3	Flower Shield
Tier I	Fortify
Traits	
Tier I	Intense Force

All-rounder Guidelines

➤ Moves:

- ◇ STAB 1
- ◇ Flex
- ◇ STAB 2/Coverage 1
- ◇ Flex
- ◇ Archetype move

➤ Traits:

- ◇ Prototyping tree
- ◇ Natural Connection/Intense Force/Protective Aura/Magical Defense tree (based on the Prototyping choice)
- ◇ Reliable Power/Reliable Defense
- ◇ Exotic (Aura of Fear and Fearsome)
- ◇ Reliable Defense/Reliable Power

Example of a All-rounder:

Snorunt	
	Physical All-rounder
	Moves
	Ice Ball
	Shadow Figure
	Bite
Level 4	Scale Dance
Tier II	Raising Senses
Traits	
Tier I	Prototyping (Guardian)
Tier II	Blueprinting (Dancing)

Support Guidelines

➤ Moves:

- ◊ Status Move
- ◊ STAB 1
- ◊ Status Move
- ◊ Flex
- ◊ Archetype move

➤ Traits:

- ◊ Protective Aura tree
- ◊ Medicinal Proficiency/Medicinal Knowledge tree (start with Medicinal Proficiency if possible)

Example of a Support:

Morgrem	
	Special Support
	Moves
	Charm
	Snarl
	Flower Shield
Level 5	Confide
Tier II	Holding Hands
Traits	
Tier I	Protective Aura
Tier II	Friend Guard
Additional	Muscle Memory (Flower Shield)

Guardian Guidelines

➤ Moves:

- ◊ STAB 1
- ◊ STAB 2/Coverage 1
- ◊ Archetype move
- ◊ Status move (Self range if possible)
- ◊ Flex

➤ Traits:

- ◊ Protector tree
- ◊ Rough Skin/Mirror Shields
- ◊ Reliable Defense
- ◊ Advanced Resistance

Example of a Guardian:

Charjabug	
	Mixed Guardian
	Moves
	Twineedle
	Charge Beam
	Ally Switch
Level 6	Elemental Barrier
Tier II	String Shot
Traits	
Tier I	Protector
Tier II	Consistent Taunt
Type Trait	Ambient Adaptation (Fire)
